REPORT ON

PROGRESS OF

# THE WPA PROGRAM

JUNE 30, 1941

WORK PROJECTS ADMINISTRATION

HOWARD O. HUNTER, Commissioner

CORRINGTON GILL, Assistant Commissioner

MALCOLM B. CATLIN, Director, Division of Statistics

## PREFACE

The Work Projects Administration, a unit of the Federal Works Agency since July 1, 1939, was established in 1935 with the primary objective of providing work for the unemployed on useful public projects. Its activities in fulfilling this purpose during the fiscal year ending June 30, 1941 are reviewed in this report.

The report contains special sections on the participation of the WPA in the national defense program and on the vocational training activities that are carried on by the WPA. It also contains a historical statement on legislative provisions for the program. This statement reviews provisions for the current (1942) fiscal year and compares them with provisions for earlier years. The remainder of the report is devoted to four sections that bring up to date previous statements concerning employment, expenditures, accomplishments, and the relationship of the WPA program to other public work and assistance programs.

# REVIEW OF THE WPA PROGRAM

**F**OLLOWING the basic policy adopted at the time of its initiation in 1935, the Work Projects Administration continued during the fiscal year 1941 to provide jobs on useful public projects for large numbers of unemployed men and women. In carrying out this primary function the WPA, which has been a unit of the Federal Works Agency since July 1, 1939, has utilized the labor of millions of unemployed workers for the construction of public facilities and the provision of services needed by communities all over the country. It has also utilized part of this idle manpower to construct airports, highways, and facilities at military and naval establishments and to carry out other undertakings that are of direct value in the defense of the Nation. At the end of the 1941 fiscal year, nearly a third of the WPA program was devoted to defense activities.

Local participation has always been an integral part of the WPA program. The selection of the unemployed workers for whom jobs are to be provided is largely the responsibility of the local public relief agencies, which investigate and refer to the WPA the workers who are in need. The kinds of projects on which WPA workers are employed are also determined to a considerable extent by the localities; local and state agencies plan and sponsor the great majority of WPA projects, take an active part in their operation, and pay a large share of the project costs.

Most communities in all sections of the country have participated in the WPA program and have thus added in varying degrees to their public facilities and services. At the same

time they have given local unemployed workers an opportunity to earn the basic necessities for themselves and their families. The wages received on WPA projects range from \$31 to \$95 a month, as provided by an established schedule of earnings varied according to differences in the cost of living in various sections of the country and in the degree of skill required for the job to which the worker is assigned.

During the 1941 fiscal year the WPA program was operated on a smaller scale than in any previous year. The number of workers who had WPA jobs in 1941 averaged 1,700,000. This figure represents a reduction of about 17 percent from the 1940 average and of nearly 44 percent from that of the 1939 fiscal year, when the program was at its height.

Provisions made for continuing the WPA program through the fiscal year 1942 contemplate a further reduction in the level of operations. The appropriation for 1942 amounted to \$875,000,000. This is the smallest annual appropriation that has ever been made to the WPA, and represents only a small percentage of the \$2,250,000,000 appropriated for the fiscal year 1939. The 1942 appropriation provides for employment of an average of about 1,000,000 workers, as compared with the 1939 average of more than 3,000,000.

## WPA Defense Work

WPA activities, like those of many other agencies of the Federal Government, were geared to the objectives of national defense

during the 1941 fiscal year. Defense work, however, represented no marked departure from the regular scope of WPA activities; rather, it represented an intensification of certain kinds of WPA work, and was carried on within the existing administrative framework without necessitating an increase in the administrative staff.

The Congress, in providing for continuation of the WPA program during the 1941 fiscal year, facilitated the WPA's participation in the national defense effort. It authorized the exemption of projects certified by the Secretary of War or the Secretary of the Navy from certain of the statutory restrictions usually governing project operations. It provided that as much as \$50,000,000 of the funds appropriated to the WPA might be used to defray nonlabor costs of certified defense projects over and above the usual allowance of WPA funds for nonlabor purposes. In addition, Congress authorized the WPA to undertake projects to train workers

in manual occupations required by industries producing for the national defense.

The details of the role that the WPA was to play in the national defense program were largely determined by the War and Navy Departments. These agencies not only indicated the kinds of projects that they considered most important for defense purposes but also specified many sites at which such work should be carried on. Projects that these agencies have certified as important for military or naval purposes have been given preference in operation to speed their completion.

Projects for the construction and improvement of facilities at military and naval establishments, where the thousands of men called to the armed forces receive training, are prominent among those designated as important to the national defense program. Much of the WPA work has involved the renovation and enlargement of facilities at old military and naval reservations that had been mused for

This sea wall and landscaping were completed as part of an extensive WPA project

years. Project workers have also transformed large tracts of woodland and other undeveloped land into new military training centers. At both old and new reservations, WPA workers have cleared hundreds of acres of land for the construction or enlargement of maneuver grounds, landing fields, and target ranges. They have installed sewer, water, power, and other utility lines; built athletic fields; and constructed or improved many other facilities, including large numbers of buildings such as mess halls, officers' quarters, hospitals, barracks, storage buildings, and maintenance shops.

To strengthen facilities for aerial defense, the WPA in 1941 greatly expanded the work it had been doing during the preceding years to extend and improve the national airport network. As a result of the increased emphasis placed on airport work the number of workers employed on such projects more than trebled during the course of the year, in spite of the general downward trend of total program employment. The work included the continued development of civil as well as military and naval airports. Many airport runways were extended to lengths adequate for the landing of swift military aircraft. Extensive improvements were made to both landing fields and facilities at military and naval air bases, and special types of facilities, such as air bombing fields, were developed. Civil airports were also built, improved, or enlarged to facilitate the movement of aircraft across the country and the concentration of planes in strategic areas.

WPA work that is considered important for military and naval purposes includes the building and improvement of access roads to military and naval reservations and defense industrial centers as well as of strategic roads that form part of the national highway network. It also includes many activities outside the construction field, such as clerical and research work for the Army, Navy, and other defense agencies, and the provision of educational, cultural, and recreational services for both military and industrial centers.

Among the defense activities undertaken by the WPA during the fiscal year 1941 was a project for the training of qualified persons for manual occupations required in industries producing for defense purposes. Through this

project, refresher courses were offered for WPA workers already possessing skills needed in defense production, and basic training courses were provided for those qualified to learn new skills. Nearly 35,000 persons were in training at the end of the year, and about 84,000 other workers had been enrolled during the preceding months. About three-fourths of the latter group left the project voluntarily, most of them for private employment.

## Project Activities and Accomplishments

The kinds of work that have been undertaken through WPA projects reflect the varying needs of local communities in all parts of the country for public facilities and services. That the projects reflect these community requirements is assured by the fact that local public agencies plan, propose, and sponsor most of the projects, as well as take an active part in their prosecution and pay a considerable share of the project expenses. In the actual initiation of projects, a further consideration is the occupational backgrounds of the workers eligible for WPA employment.

Although WPA participation in the national defense program has increased the emphasis placed on some kinds of work, notably airport development, it has not materially altered the relative importance of the major types of projects. Work on highways, roads, and streets continued to provide jobs for the largest share of the WPA workers, as it has since the beginning of the program. At the end of June 1941 about 36 percent of the project employees were engaged in work of this type. Nearly 10 percent of the workers were employed on projects for the construction or improvement of public buildings and 9 percent on projects for the extension and improvement of sewer and water systems and other publicly owned or operated utilities. The numbers of workers engaged in airport and airway work increased considerably during the year, and at the end of June 1941 these projects accounted for more than 5 percent of the total employment. Relatively smaller numbers of persons were employed on construction projects involving conservation work and work on recreational facilities other than buildings.

WPA projects covering activities outside the construction field accounted for considerably more than one-fourth of the total employment. Through these projects were provided a wide variety of community services that are important to the public welfare, such as literacy, naturalization, and adult education classes; nursery schools for preschool children from low-income families; school lunches; direct medical and health services for persons who could not otherwise afford them; the making of garments and other articles in sewing rooms for distribution to needy families and public institutions; and clerical, research, and professional assistance to many local governmental agencies. A considerable part of this work, which provides jobs for unemployed technical, professional, and clerical workers who have been certified as in need, is also an important contribution to the national defense effort. Another major activity was the national defense vocational training project through which workers were trained in occupations required in defense industries.

The work performed by WPA employees on the many kinds of projects undertaken at the request of project sponsors has resulted in a wide variety of useful public improvements and public services. Much of this work is important to the national defense.

Accomplishments in the fields of transportation and communication have been particularly extensive. In the course of the six years end-

ing with June 1941, WPA workers completed the construction or improvement of more than 600,000 miles of roads. The greater part of this mileage represents work on roads in rural areas. Many of these are farm-to-market roads giving farmers all-weather access to markets, schools, and shopping centers. Some of them are access roads to military and naval reservations and to centers of defense industry. Thousands of miles of city streets that have been built or improved to meet the needs of heavy modern motor traffic are also included. In connection with the highway work, about 117,000 bridges of wood, steel, or masonry were built or improved, nearly 1,000,000 new culverts were installed, and other appurtenant highway facilities were completed.

Both civil and military aviation have been facilitated by WPA project accomplishments. These include the construction of 220 new landing fields and the improvement or enlargement of nearly twice that number. WPA workers also constructed nearly 500 miles of new airport runways; built large numbers of airport buildings, including hangars, administration buildings, and maintenance shops; and completed many taxi strips, aprons, turning circles, and other airport and airway improvements. The airport improvement work has been carried on at a total of 760 sites during the six-year period.

Among the outstanding accomplishments of WPA workers is the construction or improvement of about 110,000 public buildings of all types. Thousands of schools have been built or modernized to reduce overcrowding and unsafe conditions, and similar work on large numbers of auditoriums, gymnasiums, and other kinds of structures for community use has been completed, as well as the construction or improvement of many buildings at military and naval establishments. Thousands of parks, playgrounds, athletic fields, swimming and wading pools, and other recreational facilities have also been constructed.

WPA projects have resulted in the extension of public educational and recreational services. These include naturalization, literacy, and general adult education classes, in which hundreds of thousands of persons have been enrolled, and the provision of leadership for

One of the thousands of stone bridges built by PWA workers

Combination high and grade school built by WPA workers. It contains a gymnasium-auditorium as well as 12 class rooms.

public recreational activities in which large numbers of children and adults have taken an active part.

Improvements in public utility systems and in public health and sanitation facilities represent another kind of community need that has led local sponsors to initiate WPA projects. Among the many accomplishments in this field are the installation of more than 14,000 miles of new water lines and nearly 22,000 miles of new storm and sanitary sewers, and the construction of more than 2,000 new utility plants.

### Employment in the Fiscal Year 1941

The average number of persons employed on WPA projects ranged from 1,890,000 to 1,410,000 during the various months of 1941 and was 1,700,000 for the fiscal year as a whole. These monthly averages include both persons working on projects operated by the WPA and those employed on projects operated by other Federal agencies with allocations of WPA funds. Persons employed on projects operated by other agencies, however, averaged only about 3 percent of the total number of workers that were paid with WPA funds.

With the growing emphasis on national defense, the relative numbers of WPA workers participating directly in this effort increased steadily throughout the year. By June 1941, about 30 percent of the total employment was

on defense projects. Most of the 419,000 persons engaged in defense work were employed on projects operated by the WPA; about 19,000, however, were working on projects operated by other Federal agencies.

In general, WPA employment has been adjusted to unemployment conditions, but month-to-month changes have reflected the usual seasonal variations in the need for jobs and assistance. In the first month of the 1941 fiscal year an average of about 1,655,000 persons had project jobs. After slight increases in the late summer and early autumn, average monthly employment rose more rapidly during the winter months and reached the year's peak of 1,890,000 in January 1941. The curtailment in the next two months was gradual, but by April the average had been reduced to 1,610,000 and by June only about 1,410,000 persons were working on WPA projects. This rapid spring decline reflects not only seasonal increases in private employment but also the general business improvement resulting from the defense program and the limitations on funds available for operation of the WPA program.

Although industrial production and private employment improved rapidly during the 1941 fiscal year, large numbers of workers continued to be unemployed.<sup>1</sup> It was estimated by the

<sup>1</sup> According to sample surveys conducted by the WPA (see footnote 2, p. 37) about 5,900,000 persons were unemployed in June 1941 as compared with 8,600,000 in June of the previous year.

WPA workers have built thousands of miles of curbs and gutters and many other highway improvements

state WPA administrations and the public welfare agencies responsible for determining whether applicants are in need, that at the end of the year there were more than 1,000,000 persons eligible for WPA jobs who could not be employed with available funds.

The improvements in business and employment conditions that occurred during 1941 were unevenly distributed among the various sections of the country. During the course of the year, private employment increased by about a fifth in half a dozen states along the eastern seaboard, but improved only slightly in some of the inland states. Similarly, the rise in employment amounted to as much as 50 percent in a few cities that are centers of defense industrial production, but was negligible in others where there was little defense activity. Furthermore, even in defense centers the improved conditions tended to affect some occupational groups much more favorably than they did others.

The state distribution of WPA employment has reflected these divergent trends in employment and need. In contrast to the national decline of 21 percent between June 1940 and 1941, the reductions in numbers of persons employed on WPA projects amounted to more than a third in five eastern states and to more than a fourth in 12 other states, most of them predominantly industrial. On the other hand, reductions made in the agricultural states of the South and Middle West were much smaller than the decline in the national average.

A high rate of labor turnover has always been characteristic of the WPA program. Thousands of workers have left project jobs each month to obtain private employment, and other workers whose resources have been exhausted through unemployment have been added to the program. As a result of this turnover, more than 8,000,000 different workers have had WPA jobs at one time or another during the six years that the program has been in operation. Many of them are now employed in defense industries where the skills and work habits conserved through WPA employment are being utilized in the defense effort.

Labor turnover during the 1941 fiscal year was marked by an unusually large volume of voluntary separations, most of which represented workers who had obtained jobs in private industry. Total separations during June represented about one-fourth of employment at the beginning of the month, and the separations rate during the year as a whole averaged about 14 percent, as compared with an assignment rate of less than 12 percent.

The millions of workers who have had WPA jobs at one time or another during the six years since the program began constitute a cross section of the Nation's total labor force. They include men and women from practically every occupational group and with a wide variety of educational backgrounds. Nearly all of them had been certified as in need by local public relief agencies before they were assigned to WPA jobs. They include workers of all ages from 18 years upward. The average age of WPA workers in April 1941, however, was nearly 43 years, as compared with 36 years for the labor force as a whole.

A number of other public programs besides the WPA provided work for the unemployed during the fiscal year 1941. Many young persons were employed on the out-of-school and student work programs of the National Youth Administration or were enrolled in the Civilian Conservation Corps. In addition, work and construction projects of the Public Works Administration and other Federal agencies employed a small number of workers. The WPA, however, continued to provide the largest share of the jobs, as it has in the past. Assistance was extended, through the special

assistance programs in which the Social Security Board participates, to three large groups of persons who are unable to work—the aged, the blind, and dependent children. Furthermore, through state and local general relief programs, assistance was given to needy persons who for various reasons were not aided under the programs in which the Federal Government participates. In some areas general relief is also given to those who receive insufficient aid under such programs to meet their minimum requirements. Subsistence grants were made to needy farm families by the Farm Security Administration. It is estimated that in June 1941 an unduplicated total of about 4,689,000 households, including 12,364,000 persons, received employment on Federal work programs or some form of public relief.

### Financing the Program

To finance WPA activities during the fiscal year 1941, Congress made available to the WPA a total of about \$1,381,000,000. Of this amount, \$975,650,000 was appropriated in the Emergency Relief Appropriation Act, fiscal year 1941, and \$375,000,000 in the Urgent Deficiency Appropriation Act (Public Law

No. 9, 77th Congress) approved on March 1, 1941. The remainder represents unobligated balances of funds from earlier acts that were reappropriated to the WPA.

Expenditures of WPA funds (in terms of checks issued by the United States Treasury) amounted to \$1,326,000,000 during the year. Most of this amount (\$1,285,000,000) was spent for program activities operated directly by the WPA, and the remainder was used by other Federal agencies for the projects that they undertook with the aid of WPA funds. Nearly \$325,000,000, or about one-fourth of the total for all purposes, was expended for defense projects.

Most of the expenditures from WPA funds were made to pay the wages of project workers. These labor costs accounted for 87 percent of the total Federal expenditures during the year. Project nonlabor costs represented only 9 percent of the total. This percentage is only slightly larger than that for the preceding year, despite the special authorization made in the 1941 act to permit larger expenditures for the nonlabor costs of certified defense projects than are normally allowed for nonlabor purposes. The proportion of WPA expenditures made for administrative purposes, which

This settling basin for the filtration plant at a large military reservation was built by WPA workers

might have been expected to increase in view of the drastic reductions in employment and the inflexibility of certain kinds of overhead costs, remained at the same figure as in the preceding fiscal year—3.6 percent of the total. The small remainder of the expenditures represented the payment of property damage claims.

Sponsors of WPA projects have always carried a considerable share of the project costs.

During the fiscal year 1941, project sponsors spent a total of nearly \$547,900,000 in the operation of WPA projects. This amount, which represents about 31 percent of the total expenditures for projects operated by the WPA, is more than sponsors had contributed in any previous year of the program, in spite of the fact that WPA expenditures on the whole were smaller than at any time since the first year of the WPA program.

# LEGISLATIVE PROVISIONS FOR THE WPA PROGRAM

THE Work Projects Administration derives its basic authority from acts of Congress appropriating funds for emergency relief. The agency was established by an executive order issued May 6, 1935, under authority of the Emergency Relief Appropriation Act of 1935. Congress has specifically provided for the continuance of the Work Projects Administration and has laid down requirements and limitations governing its program operations.

Authority for activities during the year ending June 30, 1942, is provided in the Emergency Relief Appropriation Act, fiscal year 1942. This is the seventh major statute under which the WPA has operated. Each of these acts has embodied changes in provisions concerning the operation of the WPA program and in the amounts of funds appropriated.<sup>1</sup> In addition to the major acts, five deficiency appropriation bills have been approved, some of which amended or added to the provisions of the basic ERA acts.<sup>2</sup>

The ERA Act of the fiscal year 1942 is essentially like that for the preceding year (which is discussed in detail in the *Report on Progress of the WPA Program, June 30, 1940*). The chief difference between the two lies in the amount of money appropriated to the WPA, which was about 35 percent less in the 1942 act than in the

1941 acts. This large reduction was based on the expectation of continued improvement in employment conditions because of the national defense program.

## Amount of Funds

The 1942 ERA Act made a direct appropriation to the WPA of \$875,000,000, together with unobligated balances of funds available under the previous year's appropriation. This is the smallest annual appropriation that has ever been made to the WPA. It is designed to provide employment for an average of 1,000,000 persons during a year when unemployment is expected to drop to the lowest level since the agency was established.

Direct appropriations of specific amounts have been made to the WPA beginning with the fiscal year 1939. In the fiscal years 1936, 1937, and 1938, funds for relief and work relief purposes were appropriated in a lump sum to the President, who allocated them to the WPA and

<sup>1</sup> The five deficiency appropriations were made in the following acts. The First Deficiency Appropriation Act, fiscal year 1937, approved February 9, 1937; Public Resolution No. 80, 75th Congress, March 2, 1938, Public Resolution No. 1, 76th Congress, February 4, 1939, Public Resolution No. 10, 76th Congress, April 13, 1939, and the Urgent Deficiency Appropriation Act, 1941 (Public Law No. 9, 77th Congress), March 1, 1941.

In addition to the appropriation acts, several other acts of Congress have affected the organization of WPA and the conduct of its program. Reorganization Plan No. 1, prepared by the President in accordance with the Reorganization Act of 1939, incorporated the WPA in the new Federal Works Agency (July 1, 1939). Other legislation has pertained to the use of WPA funds for designated purposes or the transfer of WPA funds to other Federal agencies.

<sup>2</sup> The first act under which the WPA operated was the Emergency Relief Appropriation Act of 1935, approved April 8, 1935. The subsequent major acts were: The ERA Act of 1936, June 22, 1936; the ERA Act of 1937, June 29, 1937; the ERA Act of 1938, June 21, 1938; the ERA Act of 1939, June 30, 1939; the ERA Act, fiscal year 1941, June 26, 1940; and the ERA Act, fiscal year 1942, July 1, 1941.

certain other Federal agencies that were engaged in public relief or work programs.

Another fairly recent development is the policy of placing statutory limitations on the administrative expenditures of the WPA. The ERA Act of 1939 and subsequent acts specified the actual amount that could be used for this purpose. The amount specified has varied with the size of the appropriation, but the administrative limitation has averaged around 4 percent of the total appropriation. The ERA Acts of 1937 and 1938 specified that not more than 5 percent of the total amount allocated or appropriated to the WPA could be used for administrative purposes. In the acts of 1935 and 1936 no specific reference was made to the amount or percentage allowable for administrative expenses. Administrative expenditures for the program during the periods to which these acts applied, however, amounted to about 5 percent and 4 percent, respectively, of total WPA expenditures.

The ERA Act, fiscal year 1942, limits administrative expenses of the WPA to \$35,466,000. This represents a reduction of some \$9,000,000 from the administrative allowance for the preceding year. Limits are also placed on the amounts that may be spent for specific administrative purposes, as follows: salaries, \$29,016,000; communication service, \$500,000; travel, \$2,800,000; and printing and binding, \$300,000.

In addition to appropriating funds to the WPA, the 1942 ERA Act also made funds available to three other Federal agencies for expenses they incur in connection with the WPA program. The General Accounting Office received \$1,400,000, the Treasury Department \$6,005,000, and the United States Employees' Compensation Commission \$3,500,000. None of the funds for the General Accounting Office or for the Treasury Department may be used for the compensation of persons engaged in the regular work of the respective agencies unless offsetting work occasioned by WPA operations is performed by employees paid from regular funds of the agencies. The act of 1942 also authorizes the Commissioner of Work Projects to allocate up to \$576,000 to other Federal agencies for administrative expenses incurred in the planning and reviewing of WPA projects.

In addition, an appropriation of \$25,000,000 was made to the Secretary of Agriculture for the surplus commodities program.

## Types of Projects

All of the ERA acts have specified the types of projects for which appropriated funds might be used. The principal types have remained unchanged, but some additions have been made from year to year. The act of 1942 authorizes the WPA to operate all the types of projects specified in previous acts,<sup>3</sup> including projects for the training of workers for manual occupations in industries engaged in production for national defense purposes. This type of project was first authorized in the Second Deficiency Appropriation Act, 1940, approved June 27, 1940. It extends WPA activities into a field that is particularly important in terms of both the labor needs of defense industries and the return of WPA workers to private employment.

Certain types of projects are specifically declared ineligible in the 1942 act, as they were in some of the earlier acts. No theater project or project sponsored solely by the WPA may be operated. WPA funds may not be used for the establishment or expansion of mills or factories which produce articles for sale in competition with existing industry; for the manufacture, construction, or purchase of naval vessels, armaments, or munitions for military

Section 1 (b) contains the following list of eligible project types: "Highways, roads, and streets; public buildings, parks, and other recreational facilities, including buildings therein; public utilities, electric transmission and distribution lines or systems to serve persons in rural areas, including projects sponsored by and for the benefit of nonprofit and cooperative associations; sewer systems, water supply, and purification systems; airports and other transportation facilities; facilities for the training of personnel in the operations and maintenance of air navigation and landing area facilities; flood control; drainage, irrigation, including projects sponsored by nonprofit irrigation companies or nonprofit irrigation associations organized and operating for community benefit; water conservation; soil conservation including projects sponsored by soil conservation districts and other bodies duly organized under State law for soil erosion control and soil conservation, preference being given to projects which will contribute to the rehabilitation of individuals and an increase in the national income; reforestation, and other improvements of forest areas, including the establishment of fire lanes, fish, game, and other wildlife conservation, eradication of insect, plant, and fungus pests, the production of lime and marl for fertilizing soil for distribution to farmers under such conditions as may be determined by the sponsors of such projects under the provisions of State law; educational, professional, clerical, cultural, recreational, production, and service projects, including training for manual occupation in industries engaged in production for national-defense purposes, for mining and for domestic service; aid to self-help and cooperative associations for the benefit of needy persons, and miscellaneous projects."

or naval forces; nor for work on penal or reformatory institutions, unless the President finds that the projects will not promote the competition of products of convict labor with products of free labor.

The act of 1942 also continues a prohibition against construction of any building that would require more than \$100,000 of Federal funds. This kind of restriction was first introduced in the ERA Act of 1939, which set the maximum permissible expenditure of Federal funds at \$52,000 for a Federal and \$50,000 for a non-Federal building. In the ERA Act, fiscal year 1941, the restriction was continued, but was raised to the present limit of \$100,000 for both types of buildings. Both the 1942 act and that of the preceding year permitted the exemption from this provision of projects certified by the Secretary of War or the Secretary of the Navy as important for military or naval purposes. Exemption was also authorized for projects approved by the President prior to May 16, 1940; projects for which an issue of bonds had been approved at an election held on or prior to that date; projects for which a state legislature had made an appropriation on or prior to that date; and projects for the completion of which funds had been allocated and irrevocably set aside under previous emergency relief appropriation acts.

### **Sponsors' Participation in the Financing of Projects**

Although state and local sponsors of non-Federal WPA projects have always financed a considerable part of total project costs, no statutory requirement pertaining to contributions by sponsors had been made until 1937. The ERA act of that year included a provision requiring the sponsor to agree in writing to finance such part of the entire cost of the project as was not to be financed from Federal funds. This provision was retained in all subsequent acts. The act of 1939 required that the sponsor furnish such part of the project cost as the Commissioner of Work Projects determined was an adequate contribution, taking into consideration the financial ability of the sponsor. It was further stipulated in this act that, for non-Federal projects approved

on and after January 1, 1940, the sponsors' share of the entire cost of all such projects carried on within any state, territory, or possession, or the District of Columbia, must average at least 25 percent. The acts for the fiscal years 1941 and 1942 continued the sponsors' provisions in this form but authorized exemption from the 25 percent requirement in the case of certified national defense projects and of projects covering work necessary to avert danger to life, property, or health in disaster or grave emergency.

Another provision that serves to control sponsors' contributions is one limiting WPA expenditures for nonlabor purposes. Initiated in the ERA Act of 1938, this provision set the limit at an average of \$7 per month per worker during the following fiscal year in any state, territory, or possession, or the District of Columbia. Subsequent acts continued this requirement, but reduced the amount to \$6 (except that if an increase in material costs occurred, the Commissioner of Work Projects was authorized to increase the average to \$7). In order not to hinder the operation of certified defense projects, which often require higher nonlabor outlays than other projects, the two latest acts authorized the use of Federal funds for payment of nonlabor costs in excess of the specified limits; the amounts of \$50,000,000 and \$45,000,000, respectively, were set aside for this purpose in the appropriations for fiscal years 1941 and 1942.

### **Federal Agency Projects**

The allocation of WPA funds to other Federal agencies for the operation of projects similar to those operated by the WPA was authorized by the ERA Act of 1938 and subsequent acts. As the total amount of the WPA appropriation was made smaller in each successive act, the maximum amount authorized for allocation by the Commissioner of Work Projects to other Federal agencies was also reduced. From \$88,000,000 in the ERA Act of 1938, the amount authorized for allocation was cut to \$60,000,000 in the act of 1939, \$44,000,000 in the act for the fiscal year 1941, and \$8,500,000 in the 1942 act. The 1942 act specifies, in addition, that \$3,500,000 of the designated

amount must go to the Department of Agriculture for the continuation during the calendar year 1941 of existing projects under its jurisdiction. Such earmarking was not written into earlier acts. The initial provision stipulated that up to 5 percent of the amount allocated to any agency could be used for administrative expenses. This limitation was changed to 4 percent in the following acts, and the requirement that at least 90 percent of the persons employed on each project must be certified relief persons was added.

## Hours and Earnings

Standards of hours and earnings of certified relief persons employed on WPA projects have undergone several changes during the course of the program. A schedule of monthly earnings was established by the President under the ERA Act of 1935, which provided for variation in monthly earnings according to (1) the degree of skill required for the job to which the worker was assigned; (2) the geographical region in which he was located; and (3) the degree of urbanization of the county in which he was employed. In the ERA Act of 1939, Congress directed the Commissioner of Work Projects to revise the earnings schedule so that the monthly rates would not vary for workers of the same type in different geographical areas to any greater extent than was justified by differences in the cost of living. This cost-of-living basis was also incorporated in the acts for the fiscal years 1941 and 1942.

Although a schedule of monthly earnings has always been in force, the hourly rates of pay and the number of hours worked per month have been modified several times. The ERA Act of 1935 directed the President to establish such rates of pay as would "accomplish the purposes of this joint resolution, and not affect adversely or otherwise tend to decrease the going rates of wages paid for work of a similar nature." The 1936 act stated more specifically that the "rates of pay . . . shall be not less than the prevailing rates of pay for work of a similar nature as determined by the Works Progress Administration with the approval of the President." Under this provision, the number of hours to be worked per month was deter-

mined by dividing the scheduled monthly earnings by the prevailing hourly wage rate. The prevailing wage principle was retained in the next two ERA acts. The 1939 act, however, specified that all persons employed on projects should work 130 hours a month. Since the monthly earnings remained fixed, the establishment of uniform hours of work had the effect of abolishing the prevailing wage principle. The 1939 act also specified that the hours of work should not exceed 8 hours in any one day, or 40 hours in any one week. These requirements had previously been established by administrative order.

Exemptions from the scheduled monthly earnings and hours of work were authorized by the ERA Act of 1939 for supervisory persons employed on work projects, for relief persons with no dependents, to protect work already done on a project, to permit making up lost time, and in cases of emergency involving the public welfare. The acts for the fiscal years 1941 and 1942 permit the further exemption from these requirements of projects certified by the Secretary of War or the Secretary of the Navy as important for military or naval purposes.

## Employment Provisions

Provisions regarding the selection of persons for assignment to WPA projects and the conditions under which they may continue in their jobs have become more restrictive and detailed with each ERA act.

The act of 1935 authorized the President to establish rules and regulations regarding the employment of personnel but gave no specific instructions. The act of 1936 added to this general authorization the stipulation that no aliens illegally within the United States might be employed on WPA projects. Under the 1937 act, aliens who had not filed declaration of intention to become citizens were also barred from employment. The act of February 4, 1939, making a deficiency appropriation to the WPA, banned all aliens from employment and required that all WPA workers must make affidavit as to United States citizenship.

The ERA Act of 1939, approved on June 30, 1939, prohibited the employment of any person

who advocates, or who is a member of an organization that advocates, the overthrow of the United States Government through force or violence. The acts for the fiscal years 1941 and 1942 continued this provision and also prohibited the employment of Communists and members of Nazi Bund organizations.

An order of preference to be followed in selecting persons for assignment to WPA projects was specified for the first time in the 1937 act. This act provided that preference was to be given, first, to war veterans who were citizens and were in need; second, to other American citizens in need; and third, to aliens in need who had declared their intention of becoming citizens. The same provision was included in the act of 1938. The 1939 act required, however, that preference should be determined on the basis of relative needs and that, when relative needs were found to be the same, veterans should be given priority over other American citizens, Indians, and other persons owing allegiance to the United States. This order of preference was restated in the ERA Act, fiscal year 1941, except that unmarried widows of veterans and wives of unemployable veterans were placed in the same category as veterans. The act for the fiscal year 1942, however, reverted to the policy of giving needy veterans first preference in employment, regardless of the relative needs of others, and specified the application of that preference in some detail.

The ERA Act of 1937 introduced the requirement, still in force, that no person who refuses a bona fide offer of private or other public employment providing adequate compensation under reasonable working conditions may be employed on a WPA project. Any person who accepts such private or other public employment is entitled, at its expiration, to return to a WPA job if he is still in need and if he lost the employment through no fault of his own.

An additional employment provision, made for the first time in the 1939 act, was the requirement that all relief workers, except veterans, who had been continuously employed on WPA projects for more than 18 months, should be removed from employment. It was further stipulated that these workers should not be considered eligible for reemployment until after 30 days had expired and their eligibility had

been recertified. This provision was modified in the 1941 act to exempt the unmarried widows of veterans and the wives of unemployable veterans, as well as the veterans themselves. The 18-month provision was further modified in the act for the fiscal year 1942, which specified that persons who have been continuously employed for 18 months should be removed from employment only in the numbers necessary to provide jobs for persons who have been certified as in need and awaiting assignment to WPA projects for three months or more. Blind persons also were exempted from the 18-month provision, and the waiting period for restoration of eligibility for employment was reduced to 20 days.

From the outset, WPA procedure required certification of a worker's need by a local public relief agency as a condition of his eligibility for project employment. This requirement, however, was not written into legislation until the ERA Act of 1939. A provision of this act stated that no relief worker might be employed until his need for employment had been certified by a local public certifying agency, or by the WPA itself in places where no local certifying agency existed or where the WPA did not accept the local certification. Another innovation of the 1939 act was the regulation requiring the WPA to review, every six months, the need of each certified worker employed on a project and to separate from employment any of these persons not found to be in need. The acts of 1941 and 1942 modified the frequency of review to at least once every 12 months.

The ERA Act of the fiscal year 1942 continued in force employment provisions of earlier acts requiring that project personnel shall, so far as practicable, be employed on projects nearest their homes, that persons employed on projects must be capable of performing satisfactorily the work to which they are assigned, and that a blind person may temporarily relinquish Social Security aid to secure WPA employment.

## Other Provisions

Certain other requirements concerning the operation of projects that had been enacted in previous legislation were continued by the 1942 act. These relate to the rental of equipment,

revolving funds, medical and hospital care for work camp employees, disposition of receipts and collections, disability and death compensation, property damage claims, purchases amounting to less than \$300, and reimbursement of the Federal Government for project funds misapplied by sponsors.

Provisions relating to administration and supervision which were continued by the new

act cover the authority for prescribing rules and regulations, the appointment and compensation of administrative personnel, the submission of periodic reports to Congress, the prohibition of political activity of employees, the cooperation of the Commissioner with the various state and local governments in meeting the unemployment problem, and the prohibition of discrimination on account of race, religion, or politics.

# NATIONAL DEFENSE WORK

**A**T the outset of the 1941 fiscal year the Work Projects Administration had developed plans for a well-rounded program of useful work on projects important to the national defense. By that time, special legislative provisions had been made for its participation in the national defense effort, and the part it was to play had been worked out. The WPA was well qualified by its previous years of operating experience to engage in a broad program of defense work. The organization was already functioning in every state. It was only necessary for the military and naval agencies to designate the specific work that they wanted done. The WPA could then direct the labor of the large reservoir of employable but unemployed workers into the prosecution of projects useful to the defense effort.

As a matter of fact, WPA defense work had really been going on since 1935, because a great deal of WPA work during the five years preceding the national emergency was along lines now recognized as essential to national preparedness. Through WPA projects, roads, buildings, sewer and water systems, and other needed facilities were provided for military and naval reservations. Practically all the work completed at civil as well as military and naval airports contributes to a stronger defense, as do the armories, rifle ranges, and camp facilities constructed for the National Guard.

Some indication of the extent of this defense work may be derived from the fact that an estimated total of considerably more than \$400,000,000 in WPA and sponsors' funds had been spent during the period previous to June 30,

1940, in providing facilities for the Army, Navy, National Guard, and Coast Guard and on publicly owned airports. This figure, of course, tells only part of the story, since much other WPA work, done for communities in many parts of the country, is now considered of real importance for defense purposes.

## Provisions Facilitating WPA Defense Work

The provisions made by Congress to facilitate use of the WPA organization in the program of national defense were contained in the Emergency Relief Appropriation Act, fiscal year 1941, and its supplement, Public Resolution No. 9, 77th Congress, approved March 1, 1941. These provisions gave the Commissioner of Work Projects authority to exempt defense projects that the Secretary of War or the Secretary of the Navy certified as important for military or naval purposes, from a number of the statutory limitations usually applicable to the operation of WPA projects.

Outstanding among the restrictions from which certified defense projects may be exempted, when necessary to expedite their operation, is the requirement that normally limits expenditures of Federal funds for nonlabor purposes to \$6 per month per worker. Exemption from this provision permits the WPA to accept defense projects that are considered suitable for WPA operation but whose nonlabor costs exceed the regular limitation. The ERA act further provided that up to \$25,000,000 of the total funds appropriated could be used for

WPA workers renovated an old sanatorium building for a photographic training unit of the Air Corps

these nonlabor purposes. This amount supplements the expenditures regularly authorized for other than labor costs in the prosecution of certified projects. The limit of this special fund was later increased to \$50,000,000 by Public Resolution No. 9.

The act also permits the exemption of certified defense projects from the provision that not more than three-fourths of the total cost of all non-Federal projects approved after January 1, 1940, in any state, may be paid from Federal funds; from the requirement prohibiting the construction by the WPA of any building costing more than \$100,000 in Federal funds; and from the established hours of work and schedule of monthly earnings, whenever this is considered necessary.

Although any or all of the exemptions are applicable to certified defense projects, the exemption privilege has not been generally applied. Only after rigid inspection of project applications, or upon specific request and justification in the case of active projects, have any of the usual requirements of project operation been waived. Special administrative orders, issued by the Commissioner to the WPA field offices, provided definite instructions for submitting requests for exemptions and indicated the circumstances under which they would be granted.

In addition to being eligible for exemptions from the established procedures, certified defense projects have been given first preference in operation over other types of defense work as well as over all nondefense projects. In an administrative order issued early in the fiscal year, priority was granted for the operation of

certified defense projects active at that time, and it was required that all approved certified defense projects should be placed in operation as soon as possible. The order further directed that such projects should be completed as rapidly as available labor and material resources would permit. Priority in the assignment of workers to certified defense projects was required, and the states were instructed to suspend operations on other projects in instances where sufficient workers were not available for the operation of certified defense work in the same area.

Not all WPA defense projects have been certified for exemptions and priority treatment. Many projects of importance in the defense effort have not required certification, as they either did not need exemption from the usual procedures for successful prosecution or were not of direct concern to the military agencies. Many of the projects in this noncertified category were designed to assist the defense efforts of agencies other than the military services or to provide urgently needed facilities for communities where conditions were greatly altered by the influx of large numbers of persons to new or enlarged military centers or defense industries. The work performed on WPA projects requested by such communities has contributed much to the absorption of these sudden growths in population resulting from defense activities.

Through the certification process that has been established, the War and Navy Departments have largely determined the scope of WPA defense activities. Projects which these service agencies have certified as valuable for military or naval purposes are given first preference in operation, to expedite their completion. Both agencies have indicated specific categories of projects which they consider of major importance to the defense program. The list drawn up by the Secretary of War included the following project groups:

--All projects sponsored by the War Department or its duly authorized officers which are cleared by the War Department in Washington in accordance with established procedure for Federal agency clearance.

All projects for the construction or improvement of civil airports which have been

certified as important for military purposes or at sites which are designated by the War Department. Work especially desired at these sites includes field improvements such as grading, drainage, construction and extension of runways, runway paving, and night lighting, rather than the construction of buildings and hangars. (The revision and extension of lists of certified civil airport sites continued at frequent intervals throughout the fiscal year.)

—All projects for the construction or improvement of access roads leading to military posts, stations, or concentration areas designated by the War Department. In February 1941, the Secretary of War expanded the field of access road work to include work on roads leading to industrial plants working on contract orders for the War Department.

—All projects for the construction or improvement of roads forming a part of the national strategic road network as shown on maps of the War Department. (The determination of the specific roads to be improved as a part of this strategic system was made a responsibility of the Public Roads Administration and required the cooperation of the various state highway departments which ordinarily would act as sponsors of the projects.)

—All projects sponsored by the National Guard for the construction or improvement of National Guard facilities (except the construction of buildings where the cost from WPA funds exceeded \$100,000).

All projects for the construction or improvement of Reserve Officers' Training Corps

facilities where the sponsor of the project agreed to maintain the facility after completion (also with the exception of buildings costing more than \$100,000 in WPA funds).

All projects approved by the U. S. Public Health Service, sponsored by state or local governments, and located in the vicinity of War Department posts, stations, and concentration areas. (For these projects, which usually covered community sanitation work and malaria and mosquito control, the surgeon of the appropriate corps area or department was required to certify that the work would be beneficial to the health of troops stationed in the vicinity.)

—All projects designed to provide or improve air markers on air lanes and day markers on landing areas, where the proposed work conformed to specifications approved by the Civil Aeronautics Authority.

—Projects sponsored by the Federal Communications Commission for work in connection with its radio monitoring stations.

The list submitted by the Secretary of the Navy specified the following categories of work as of outstanding importance:

—All projects sponsored by the Navy Department or its duly authorized officers.

—All projects for the construction or improvement of airports or naval training facilities.

All health and sanitation projects sponsored by the state or local government agencies in the vicinity of naval establishments or in

WPA workers grading an area between runways at a western airport

locations where important work was being done for the Navy.

All projects for the construction or improvement of streets, bridges, and highways leading to naval establishments or for the construction of roads that might be considered of importance in the operation of these establishments.

These categories of work comprised the bulk of WPA defense activities during the fiscal year ending with June 1941.

### Employment on Defense Projects

Employment on defense projects financed with WPA funds rose steadily during most of the 1941 fiscal year. In the first month (July 1940) an average of about 228,000 persons were employed. Rapid expansion of defense activities in subsequent months brought the monthly average to more than twice that figure, or 488,000, in February 1941. During the remainder of the fiscal year, total WPA employment was reduced as a result of the rising demand for workers in private industry and the limited amount of funds available to the WPA. The decline in total WPA employment was reflected in employment on defense projects. The rate of decrease in the numbers employed on defense projects, however, was much slower than that for the program as a whole, since curtailment of the program was accom-

plished as far as possible through reduction in nondefense types of work. The percentage of WPA employment devoted to defense work therefore continued to increase. At the beginning of the fiscal year, only 14 percent of all WPA workers were employed on defense projects, but by February 1941 this ratio had increased to 26 percent. By June 1941 about 30 percent of WPA employment (an average of 419,000 persons for the month) was devoted to defense work.

A definite pattern of concentration at the strategic corners and outposts of the country becomes evident when each state's defense project employment is considered in relation to its total WPA employment. Hawaii, outpost of Pacific coastal defense, had the largest proportion (80 percent) of its WPA workers engaged in defense work at the end of June 1941. In Maine, at the extreme northeast corner of the country and the last take-off point for air traffic between this country and Europe, 72 percent of the employees were engaged in defense work. In Puerto Rico, a key point of defense for the strategic Caribbean and Panama Canal areas, nearly 67 percent of the WPA employment was on defense projects. Defense projects also accounted for more than 60 percent of the program employment in the District of Columbia, the states of Washington, Florida, and South Carolina, and the Virgin Islands. On the other hand, in such inland states as Iowa, Arkansas, and North and South Dakota, less than 10 percent of the WPA personnel was working on defense projects. A state's participation in defense work has been influenced to a great extent by its geographical situation and its importance to defense strategy. Another factor has been the amount of military or naval concentration within the confines of the state.

Most of the 413,000 persons engaged in defense work at the end of June 1941 were working on projects operated directly by the WPA. Nearly 19,000, however, were working on projects operated by other Federal agencies but financed by funds allocated to them by WPA.

Certified defense projects provided jobs for 240,000 of the defense workers, and other defense projects employed nearly 173,000 persons. Many of the workers on certified defense projects operated by the WPA were exempted

TABLE 1. AVERAGE NUMBER OF PERSONS EMPLOYED ON WPA DEFENSE PROJECTS SUBJECT TO LEGISLATIVE EXEMPTIONS AND ON OTHER PROJECTS DESIGNATED AS OF DEFENSE IMPORTANCE

| MONTHLY, JULY 1940-JUNE 1941 |         |                          |                                               |

A Financed by allocation of WPA funds

from the standard limitations on hours of work and total monthly earnings, in accordance with the provisions of the ERA act for the fiscal year 1941.

The types of work done under the WPA defense program during the 1941 fiscal year were generally similar to its major activities during the five years preceding the defense effort, although a somewhat greater emphasis has been placed on construction work under the defense program. Construction projects provided jobs for 343,000, or four out of five persons working on defense projects financed by the WPA at the end of June 1941. The remaining 70,000 persons were engaged in nonconstruction activities for defense purposes.

The largest share of the workers on defense projects, as well as on the WPA program as a whole, were employed in the construction and improvement of highways, roads, and streets. Some 152,000 persons were engaged in this type of work, nearly 111,000 of them on projects to build or improve portions of the national strategic network of main or parallel traffic routes. About 29,000 were working on access roads to military and naval establishments or to industrial plants of importance to the War

or Navy Department. The balance of the highway employees (12,000 persons) were performing work on roads inside military and naval reservations or were doing defense highway work of a miscellaneous character.

Projects for work at civil, military, and naval airports reflect more definitely than any other type of WPA work the emphasis placed on defense objectives during the 1941 fiscal year. This kind of work provided jobs for some 71,000 persons at the end of June 1941, more than three times the number so employed a year earlier, despite the general decline in total employment. Projects for the construction of buildings, largely at the new military and naval concentration centers established during the year, employed the services of 62,000 WPA workers; and those providing public utilities, such as water supply and sewage disposal systems, accounted for nearly 35,000 of the defense workers. Land, water, and other types of conservation work; development of recreational facilities; and other types of construction work were employing the remainder of the workers on defense projects in the construction field at the close of the fiscal year.

The WPA has also provided a variety of services outside the construction field that contribute directly to defense. For communities adjacent to military and naval training centers, whose normal facilities were inadequate to cope with the needs of large numbers of soldiers, the

<sup>a</sup> Projects which may be exempted from legislative provisions regarding cost of buildings, hours of work, earnings, nonlabor costs, or sponsors' funds.

WPA has provided entertainment and recreational facilities. Similarly, these communities, as the defense program developed, were deluged with requests for recorded information of various kinds far beyond their normal capacity and ability to prepare. Consequently, the WPA has employed recreational workers, librarians, musicians, teachers, writers, artists, research workers, record clerks, and many other types of professional and clerical workers to provide the assistance required in these communities and in the military centers themselves.

At the end of the fiscal year, a total of more than 33,000 persons were engaged in the various community service activities that are important to full development of the national defense effort. In addition, persons employed on the national defense vocational training project (described in another section of this report) are included in the total of WPA workers engaged in defense work outside the construction field.

New naval recruits at an induction center which was built by WPA workers

Nearly 37,000 persons were employed on this project at the end of June 1941. Of this number, 35,000 were being trained for occupations needed in defense industries, and 2,000 were employed in other capacities on the project.

## Project Activities and Accomplishments

WPA projects, initiated with the major objective of providing jobs for unemployed workers, have resulted in a variety of tangible accomplishments in the form of facilities needed by the Army and Navy and by other defense agencies. Even during the years previous to the national defense program, much WPA work was done at the direct request of these agencies.

Some of the varied accomplishments that have resulted from project work of the kinds now recognized as important for defense purposes are summarized in the accompanying table and described briefly in the paragraphs that follow.<sup>1</sup> These items of accomplishment, however, by no means measure the total contribution that WPA project work has made to the national defense. They include only work for the Army, Navy, Coast Guard, and National Guard (except for work at civil airports), and cover only a few of the many and varied facilities that were completed for these agencies during the six years ending with June 1941.

## Facilities at Military and Naval Establishments

Project work done under the WPA program has included the improvement of facilities or the extension of services at most of the military and naval establishments in the United States. At some centers the work has been extensive and has included many kinds of buildings and facilities. At others the service agencies have done a great deal of improvement work themselves, and WPA project activities have been confined to a few facilities such as target ranges, buildings, or roads. Work for the National Guard and the Coast Guard is characterized by the same kinds of variation in scope and type.

<sup>1</sup> Much of the descriptive detail originally planned for inclusion in this section has been omitted in order to avoid disclosure of military information.

Work completed through WPA projects during the six years ending with June 1941 included the construction of more than 3,200 new buildings and the renovation or enlargement of nearly 14,700 others. WPA workers also constructed about 100 new utility plants and improved some 150 others. Sewage and water treatment plants, heating plants, and pumping

<sup>a</sup> Includes surfacing.

One of the new Navy hospital buildings during construction

stations were among the kinds of plants on which work was completed. In addition, many miles of water mains and sewer lines were installed, and other utility equipment was provided for the use of the armed forces.

Much of the work was undertaken as part of general improvement programs that included most of the facilities of a military post or naval base and sometimes covered all the defense establishments of an entire area. WPA modernization work at army camps has greatly enlarged their capacity through the construction or renovation of mess halls, barracks, officers' quarters, school buildings, and other structures, and the installation of sewer, water, and power lines and other utilities. Facilities provided at naval reservations have ranged from quarters and recreation buildings for officers and men to docks, railroad spurs, and shipbuilding and repair facilities. Improvements to security precaution arrangements, such as alarm systems, fences, and sentry houses, have also been made by WPA workers.

Among the most important types of structures erected at military and naval establishments are hospitals and infirmaries. WPA workers completed the construction or improvement of more than 300 such buildings during the six-year period of operations. One group of buildings under construction during the fiscal year 1941 at an important naval base was designed to meet both the growing demand for bed space and the need for improved treatment facilities. The project work involves the construction of several fire-proof structures around a central court. An administration building to

This hangar was constructed by WPA workers

house the offices, laboratories, and the surgical department and a subsistence building with mess facilities and the power plant are included as well as a number of clinic and ward buildings and quarters for nurses and for officers.

Modern military and naval reservations require numerous types of training facilities, many of which have been provided through WPA projects. Large areas have been cleared and drained for maneuver grounds and target ranges of various kinds have been constructed and modernized. Among these was an antitank range to be used in the training of antitank gunners at one of the Army's reservations. WPA workers cleared brush and trees from many acres and constructed a narrow-gauge railroad over a deep ravine on a high trestle built largely with the cleared timber. The railroad

carries gravity-propelled cars bearing targets that simulate the movements of tanks in modern warfare. At the same reservation, WPA workers reconditioned an old rifle range, roofing the pit at the rifle butts, improving drainage, and modernizing the target elevators, target boards, and scoring benches.

Project work undertaken for the Army in connection with the development of one of its Air Corps training centers is typical, at least in its variety, of WPA work for the armed forces. Buildings have been constructed, utilities installed, and landing fields developed at three units of the center. At the special pursuit school where secondary training is given to pursuit pilots, mess halls, barracks, recreation buildings, warehouses, and other buildings were under construction during the 1941 fiscal year. Similar improvements have been made at the basic training school. WPA work in both places has included clearing, grading, draining, and other general improvements to the landing fields; installation of water, electric, and gas distribution systems; and the construction of roads, streets, and sidewalks. At the headquarters and advanced training school of the center, the work is a continuation of an extensive construction program that has been carried on with the help of WPA projects for a number of years. Recent work includes the construction of additional buildings, improvement of the landing field, and development of a number of auxiliary landing fields in areas adjacent to the center.

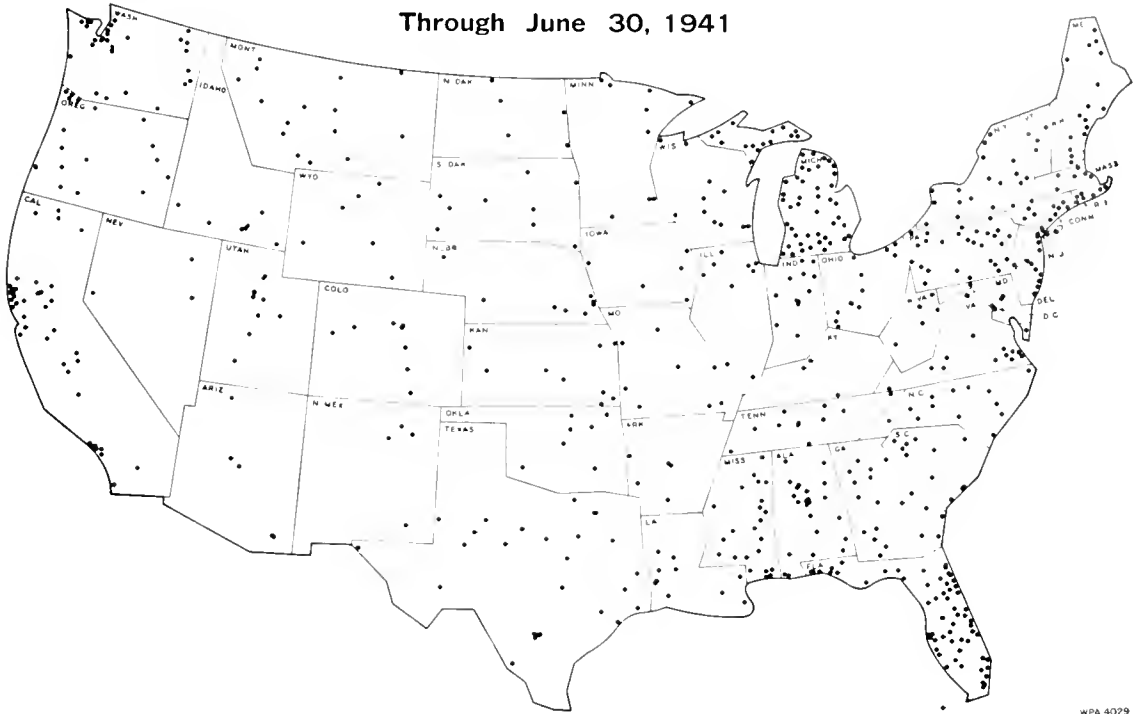

Rifle ranges built by WPA workers are in use at many training centers

## AIRPORTS CONSTRUCTED OR IMPROVED BY WPA

Through June 30, 1941

WPA 4029

Armories, airports, and camp facilities for National Guard units and training facilities for the Reserve Officers Training Corps are also included among the projects undertaken by WPA workers. Work done at National Guard camps has been similar to the general improvements made at army posts. Many of the armories and airport buildings are designed to serve community as well as military purposes. A large hangar for a National Guard observation squadron in the Middle West was nearing completion at the end of the 1941 fiscal year. It has additions on either side of the hangar area that contain caretaker's quarters, garage, shop, boiler rooms, classrooms, offices, and locker and dressing rooms for officers and enlisted personnel. When it is no longer needed for military purposes, the county commissioners, who are sponsoring the project and helping to finance it, plan to use the building as a warehouse and shop for county road machinery.

Facilities for units of the ROTC were being constructed through WPA projects at a number of colleges and universities during the 1941 fiscal year. Among these was a new building which will provide a drill hall and offices for the large volunteer unit of an eastern college. A military science building was also under construction for the ROTC trainees at a middle western university; one section of this building will house offices and laboratories and the other will include demonstration rooms, repair shops, and a rifle range. To help provide the airport facilities required for ROTC pilot training activities, WPA workers were enlarging an ROTC airport at a southern institution and extending its facilities through a project certified as important for defense purposes. Previous WPA work at this airport had included the construction of a hangar and improvement of runways. Current activities involve the construction of shops and a boiler

Construction of shoulders on an access road  
being done by WPA workers

house, installation of sewage disposal facilities, and field drainage work.

To protect the health of the soldiers and sailors in training areas, WPA malaria control projects were undertaken in a number of states and Puerto Rico during the fiscal year 1941. The WPA is cooperating with the Army, Navy, United States Public Health Service, and state and local health authorities in their campaign to eliminate malarial mosquitoes at army

camps, air bases, naval stations, and in adjacent areas. The malaria control projects which the WPA has operated for the past six years have been important factors in the sharp declines in the incidence of malaria that have been reported in a number of regions. WPA malaria control activities include permanent measures, such as the construction of drainage channels and lateral ditches, removal of undergrowth and trees that impede drainage, and other work to eliminate breeding places. They also include temporary measures, such as the spreading of larvicides.

### Work on Civil Airports

WPA defense work in the field of airport development has not been limited to the construction of landing fields for the Army and Navy or to the expansion of facilities at existing military and naval airports. It has also included extensive improvements at civil airports in all sections of the country. Whatever the original objective of the airport work, it is considered important for defense purposes if it has resulted in landing fields and ground facilities that can be used in the movement of air forces, the concentration of aircraft in strategic areas, or the training of personnel for the air arms of the military and naval services.

To provide landing fields capable of receiving modern military aircraft, WPA projects certified by the War Department as essential to national defense were carried on at many airports in all parts of the country during the 1941 fiscal year. Besides the construction of new long runways, the work at these airports usually involves clearing, grubbing, excavating, and grading; the installation of drainage facilities; and the extension of lighting systems. In addition, facilities for servicing planes on the ground have been improved through the construction or renovation of hangars, repair and machine shops, administration buildings, and other structures.

Accomplishments on WPA airport projects at civil, military, and naval airports during the six years ending with June 1941 included the development of about 220 new airports and the improvement or enlargement of nearly twice that number. In the same period WPA workers

WPA workers built this "sabotage" fence

WPA workers building an access road to air base

built some 2,600,000 feet (about 500 miles) of new runways, nearly two-thirds of which had high-type surfacing. They also completed about 900 new airport buildings among which were nearly 200 hangars and more than 100 administration buildings. In addition, large numbers of existing airport buildings were renovated or enlarged and many airport facilities of other types were improved. Altogether, WPA airport projects have been undertaken at 760 different sites throughout the country.

#### **Access Roads, Strategic Highways, and Other Transportation Facilities**

Access roads to military and naval reservations and to industrial centers are essential to effective national defense, as are also the strategic highways that connect important centers. In recognition of this fact the Army and Navy have designated several hundred sites of WPA road projects as important for defense purposes.

Work on such projects is similar to that done on roads all over the country during the six years that the program has been in operation, and the accomplishments in this field are included in the total of more than 600,000 miles of all kinds of road construction and improve-

ment that were completed by WPA workers during that period. New roads are being built in undeveloped sections; some of them are hard-surfaced highways and others are temporary gravel-surfaced roads built to expedite camp or industrial construction. Existing roads are being widened, drained, and resurfaced, and city streets are being similarly improved to handle the heavy traffic that moves to and from camps and industrial centers. Also included in defense road work are the improvements being made to main and parallel routes of the strategic highway network to speed up the movement of both military and commercial traffic.

Another kind of transportation work undertaken through WPA defense projects is the improvement of publicly owned railroad lines in and to military and naval reservations. Maintenance work on many of these lines that handle troop movements and supplies had been neglected during depression years. With the expansion of the armed forces and increased need for transportation facilities, the long-deferred improvements became imperative. In connection with these improvements, WPA workers have been placing ballast, putting in new sidings, renovating piers and wharves, and

doing extensive reconstruction work of various other kinds.

### Other WPA Defense Work

Among the variety of projects undertaken by the WPA in the interests of national defense are many other types in both the construction and nonconstruction fields that do not come under any of the major groupings already described. Through these WPA defense projects are being provided many of the facilities and services needed in communities that have grown rapidly with the expansion of defense industries. Water distribution systems, sewer lines, and sewage treatment plants, for example, are being expanded in order to handle increased loads in growing communities.

One of the many problems confronting Army officials in arranging for war games and maneuvers is the need for securing prior agreements with landowners for the use of their property. WPA clerical workers handled a great deal of the tremendous amount of detail involved in checking and completing these agreements. Another need was for a dictionary of military terms for use in consulting foreign military literature and for other military purposes. Such a dictionary was under preparation during the 1941 fiscal year by WPA writers and translators working in six foreign languages. To make available information concerning the Greenland area, WPA workers have been preparing a bibliography of publications on this region, which is of great importance to American defense. Particular emphasis has been placed on material that is of value to the Army Air

Corps. In this work the writings in 13 languages of explorers, scientists, traders, and sea captains were being indexed.

In view of the expanded need for supplies of raw materials in defense production, the availability of such supplies in the United States is of considerable importance. Efforts to obtain information on this subject are being assisted by WPA survey projects. Surveys were being conducted during the 1941 fiscal year to ascertain the amount of underground oil in Texas, to find deposits of commercial diamonds and manganese believed to be in the Blue Ridge Mountains, and to locate available limestone deposits in an Arkansas county.

Activities on WPA education, recreation, and art projects have been directed toward meeting the needs for these types of services both at military establishments and in expanding defense industrial areas. Among the developments in the field of adult education is the project to teach Spanish to officers of the Army Air Forces. A special textbook was prepared by the WPA for the program. It contains a special vocabulary designed to aid English-speaking pilots in making themselves understood in the event of forced landings in Latin-American countries or when on special missions to remote regions where no interpreters are available. This project has been extended in the fiscal year 1942 to include Navy and regular Army personnel. The Army has also requested that WPA teachers be assigned to teach English to Spanish-speaking members of our military forces in Puerto Rico.

To meet expanding defense needs, services supplementary to the nursery school program have also been developed. These include public child-care centers for children of working mothers in low-income groups and child development units in defense areas, primarily for children of enlisted men in the armed forces.

The need for books, which has developed with the enlargement of military centers and expansion of defense areas, has created a new demand for WPA library extension services. The WPA attempted to meet the demand during the fiscal year 1941 by extending its services to both army camps and industrial centers. New books were supplied and old ones repaired and catalogued for camps in a number of states.

WPA Spanish class for Air Corps officers

Local organizations have in many instances made books available to the WPA for distribution to servicemen. With WPA aid, state-owned books have been catalogued so that they may be loaned in defense centers.

In response to numerous requests, WPA artists and craftsmen were assigned to projects at military and naval training centers during the fiscal year 1941. These artists are decorating the walls of recreation rooms, officers' quarters, mess halls, and other camp buildings with murals, frescoes, prints, plaques, and other art works. Under the direction of officers, they are providing visual education aids for trainees in the form of posters that illustrate the various steps in tactical drill or exercise. They are also making charts and designs to illustrate the operation of guns, armored cars, tanks, airplanes, and even battleships, and to indicate the proper construction of pontoon bridges, correct signaling, firing methods, and other military procedures. WPA craftsmen are making light fixtures, furniture, fountains, draperies, curtains, and other objects for the quarters of officers and men and for recreation halls. Classes in art, photography, and craft subjects are being conducted by WPA instructors for soldiers and sailors in work studios adjacent to military and naval reservations.

Similar services in the fields of music and recreation are being provided through other WPA projects. Hundreds of concerts have been given each month at military and naval posts and in adjacent communities. Bands have been organized for military camps that had none of their own, and choral groups have been developed. Recreational leaders in a variety of activities, including such sports as archery and skiing, have been assigned to military establishments at the request of their commanding officers.

### Expenditures for Defense Work

Approximately a fourth of all WPA project expenditures during the fiscal year ending June 30, 1941, were made for defense projects. The total WPA outlay for these projects amounted to nearly \$324,752,000, of which \$303,756,000 was spent for defense projects operated directly by the WPA and \$20,996,000

Reading rooms are provided for men in the armed forces

was used for defense work undertaken by other Federal agencies with WPA funds transferred to them for this purpose. In addition to the WPA funds, the sponsors of defense projects provided more than \$131,203,000, bringing to nearly \$456,000,000 the total expenditures for WPA defense projects during fiscal year 1941.

The bulk of the expenditures, as well as of the employment, on defense projects operated by the WPA was for construction work. The proportion of defense expenditures that was made for construction projects was somewhat

TABLE 4.—AMOUNT OF WPA AND SPONSORS' FUNDS EXPENDED ON DEFENSE PROJECTS SUBJECT TO LEGISLATIVE EXEMPTIONS AND ON OTHER PROJECTS DESIGNATED AS OF DEFENSE IMPORTANCE OPERATED BY WPA, BY MAJOR TYPE OF PROJECT

| National defense vocational training          | 29,995,837    | 18,427,536    | 11,568,301      |

A WPA band furnishes music for drill exercises

larger, however, than the share of defense employment that was devoted to these activities. This difference in ratios is attributable for the most part to the larger requirements for materials, equipment, and other nonlabor purposes in construction work.

Almost half the outlays for defense construction projects were made for road work. Expenditures for this part of the program totaled about \$186,000,000. A considerable part of this amount was used in building or reconstructing access roads, roads that form part of the national strategic road network, and roads and streets in military and naval reservations. Expenditures for the construction and improvement of airports and airways amounted to

\$70,000,000—almost twice as much as was used for similar purposes during the previous fiscal year, when total WPA expenditures were much higher. Among other major construction project expenditures were \$56,000,000 for work on buildings such as armories and the many kinds of buildings required for adequate troop-training centers, and about \$44,000,000 for water purification, sewage disposal, and other utility projects.

The WPA nonconstruction activities conducted under the defense program cost a total of a little less than \$48,000,000 in both WPA and sponsors' funds during the 1941 fiscal year. The largest part of this expenditure (nearly \$30,000,000) was made to provide vocational training courses for WPA workers in the occupations and skills needed to fill the employment requirements of the rapidly expanding defense industries. Research work and surveys conducted in the interest of defense cost more than \$6,000,000. The preparation and transcription of public records such as birth certificates and alien and naturalization records for many state and local government agencies accounted for nearly \$3,000,000. The balance of the outlays for nonconstruction activities were distributed among a variety of useful defense projects such as the extension of library services and other educational work for the benefit of men in the armed forces.

# VOCATIONAL TRAINING

A BASIC policy of the WPA has always been to assist its workers in returning to employment in private industry. The first step in this direction is insistence upon the registration of workers with local public employment offices so that they may be considered for any available jobs for which they are qualified.<sup>1</sup> In their WPA employment, workers have been assigned as far as possible to jobs that would enable them to maintain their old skills. When this has been impossible, they have sometimes been assigned to jobs that enabled them to learn new skills, and some of them have been given an opportunity to learn supervisory methods and to do supervisory work on projects. In addition, specific projects have been undertaken to provide vocational training opportunities. Through some of these projects large numbers of persons have been prepared for jobs in domestic service. On other projects, conducted under the adult education program, many kinds of vocational classes have been provided and thousands of persons interested in reviving old skills or acquiring new ones have been enrolled.

With the expansion of the national defense program the demand for skilled and semiskilled workers increased sharply. To assist in satisfying the new needs for workers trained in the occupations utilized in defense industries, the WPA has increased the emphasis placed on vocational training and has extended the scope of its activities in this field. A new program of defense vocational training projects was

established that enabled nearly 120,000 WPA workers to receive training in occupations required by defense industries during the course of the 1941 fiscal year. Projects to train airport servicemen, and nonprofessional workers for hospitals and institutions, were also initiated.

The defense vocational training activities of the WPA are conducted as an integral part of a broad national training program to meet defense needs. The United States Office of Education, which cosponsors certain WPA training projects, has greatly increased its own training activities. The National Youth Administration has been placing emphasis on the training of young persons for specific jobs in various strategic industries. The Civilian Conservation Corps has also modified its training courses to meet national defense needs. In addition, the Maritime Commission, the Civil Aeronautics Administration, the Army Air Corps, the Navy, and the Department of Labor are expanding their vocational training work.

## WPA Defense Training

The training of workers for manual occupations needed in industries producing for defense purposes was initiated soon after legislative provisions specifically authorized the WPA to undertake this work.<sup>2</sup> A nation-wide vocational training project was set up under the sponsorship of the Advisory Commission to the Council of National Defense and the cosponsorship of the United States Office of Educa-

<sup>1</sup> During the 1941 fiscal year between 5 and 9 percent of the workers left their WPA jobs voluntarily each month, most of them to take jobs in private industry.

<sup>2</sup> This authority was contained in the Second Deficiency Appropriation Act, 1940, approved June 27, 1940.

Refresher and preemployment courses in machine shop work are given under the defense vocational training project

tion.<sup>3</sup> This project has the dual purpose of supplying the labor needs of defense industries and of facilitating the return of WPA workers to private employment. Through the project, refresher courses are provided for persons who have some experience in skills needed by defense industries, and preemployment courses are provided for those who wish to learn new skills. All persons enrolled in these courses, including WPA workers, are registered with public employment offices.

Responsibility for various phases of the project is shared by the WPA and the United States Office of Education. The WPA handles the selection and assignment of WPA trainees and pays them regular WPA wages while they are learning because they do not have sufficient resources with which to finance even their minimum needs during the training period. The WPA also provides the personnel for the maintenance of records necessary for the operation of the project. The United States Office of Education, through the cooperation of state and local school officials, is responsible for the technical training aspects of the project. It, or its representatives, select and pay the salaries of instructors, supervisors, and training superintendents as well as of the personnel required for the maintenance of buildings and facilities, and they also provide the necessary materials, light, heat, and power. The United States Office of Education, with the cooperation and assistance of state and local advisory commit-

tees, determines the methods and types of training to be given and the numbers and kinds of workers to be trained under the project.

WPA workers (including eligible persons awaiting assignment to WPA jobs) are selected for training on the basis of their past employment and WPA employment records, aptitudes, and adaptability to training. When these indicate that a worker might qualify either for immediate defense employment or for training, a more intensive investigation is made to obtain additional information concerning occupational experience and skill, health, and interest in further training. Some of the workers have had experience in the use of various hand or machine tools or in occupations requiring manual dexterity, which directly qualifies them for training or for immediate employment. Others have avocational interests in model building, woodworking, or the building and repair of radio and electrical equipment that indicate potentialities to be developed. Project supervisors are consulted as to the work habits, attitudes, and other qualifications of the prospective trainees, and in some areas use is made of aptitude tests.

This information forms the basis of a defense industries employment register that is main-

Texas trainees learning to service aircraft engines

<sup>3</sup> In January 1941, the Office of Production Management became sponsor of this project.

tained in each WPA district office to facilitate the selection of workers for specific training courses or specific jobs. The register is limited to the list of about 500 occupations designated by the Office of Production Management as essential to industries producing for national defense. Record cards for persons who are qualified for immediate employment in defense industries are separated from those for persons who by experience or training are qualified for refresher courses or for preemployment training. By April 1941, the basic registers included the names of approximately 151,000 persons qualified for immediate employment in defense industries, 154,000 persons qualified for training, and 31,000 already assigned to training courses.

WPA workers are given training in many of the occupations required by industries producing for national defense. A number of these occupations are in the metal trades essential to armament production. Machine shop classes have had the largest share of the trainees; nearly a third of the total enrollment on June 25, 1941, was in these classes. (See Table 5 below.) These trainees learn many of the techniques required in the construction and assembly of engines for aircraft and ships and in the manufacture of guns, tanks, and other military and naval equipment.

TABLE 5.—NUMBER OF WPA WORKERS RECEIVING TRAINING THROUGH THE NATIONAL DEFENSE VOCATIONAL TRAINING PROJECT, BY TYPE OF COURSE

JUNE 25, 1941

| Course                            | Number   | Percent |
|-----------------------------------|----------|---------|
| Total                             | A 34,889 | 100.0   |
| Auto servicing                    | 3,677    | 10.5    |
| Airplane servicing B              | 2,268    | 6.5     |
| Construction                      | 515      | 1.5     |
| Drafting                          | 1,002    | 2.9     |
| Electrical servicing              | 1,898    | 5.4     |
| Forge                             | 175      | 1.4     |
| Foundry                           | 770      | 2.2     |
| Machine shop                      | 11,401   | 32.8    |
| Pattern making                    | 770      | 2.2     |
| Radio servicing                   | 285      | 0.8     |
| Riveting                          | 342      | 1.0     |
| Sheet metal                       | 3,493    | 10.0    |
| Ship and boat building and repair | 749      | 2.1     |
| Welding                           | 5,291    | 15.2    |
| Woodworking                       | 1,552    | 4.4     |
| Other                             | 401      | 1.1     |

A Does not include nontrainees employed on the project.

B Includes employment on the airport servicemen training project.

Classes in welding, sheet-metal work, and riveting are turning out workers necessary in the production of aircraft, ships, tanks, trucks,

The proper method for pouring molten metal into forms is taught in a class in foundry work at a Detroit vocational school

scout cars, and other mechanized equipment. The foundry and forge work essential to these and other fields are also taught to employees on the project. These kinds of classes together accounted for almost a third of the trainees enrolled at the end of June. About one-fourth of the trainees were enrolled in the group of courses that prepare workers for the servicing of radio and electrical equipment, airplanes, and automobiles. Most of the remainder were attending classes in which woodworking, pattern making, and such technical subjects as mechanical, structural, and electrical drafting were taught.

Although some variation exists among the training centers, the basic methods of operation are similar. Class schedules are arranged so as to avoid conflict with the regular day and evening school sessions; some of the classes are scheduled between 10 o'clock in the evening and 4 or 5 o'clock in the morning if no other time is available. The teaching staff is made up of experienced industrial workers and day-school teachers who in some instances give part-time services. The subjects taught are those most needed by the defense industries in the area adjacent to the center. Each training course is adapted as much as possible to

Trainee learning to do a job of drilling inside an airplane fuselage

meet the requirements of the particular group of trainees it includes. Allowance is made for the fact that some will learn more rapidly than others and that, as these trainees are placed in industry, others will be enrolled. Usually the technical instruction and related theory given in the training shop are supplemented by additional instruction in the classroom, and performance tests as well as oral and written examinations are given throughout the course.

The training period on the project lasts from six to twelve weeks, but trainees may leave at any time if jobs become available and they are proficient enough to begin work. Workers who enroll in refresher classes frequently find that two weeks' training is sufficient to bring back the old skills. Experience during the year of operation has shown that many trainees can obtain employment in private industry at double and triple their WPA earnings. Some persons of unusual mechanical abilities have been discovered in the training classes, and many of them have secured jobs in which they have made rapid progress. If no jobs are available in private industry at the completion of the training course, the trainees may be assigned to jobs on other WPA projects. Such

workers constitute a reserve that may be drawn upon when additional workers are needed in defense industries.

The number of trainees assigned to this training project increased steadily during the fiscal year 1941. At the end of June nearly 35,000 persons were in training. In addition to these, nearly 84,000 WPA workers had been assigned to the project during the course of the fiscal year. Of this group, 75 percent left the project voluntarily; 45 percent were definitely known to have obtained private employment and 30 percent presumably found jobs. The remaining 25 percent returned to other WPA projects.

### In-Plant Preemployment Training

Toward the end of the fiscal year 1941, in-plant training, designed to accelerate the movement of workers into defense jobs, was initiated under the WPA defense training project. Under this training plan, workers who have been carefully selected on the basis of work experience, adaptability, and potentialities receive direct training at occupations approved by the OPM in industrial plants engaged in production for national defense. During the training period, the WPA pays their wages at the prevailing learners' rates established by employer-employee agreements in the participating plants.<sup>4</sup> The trainees, under the supervision of the plant management, learn the

<sup>4</sup>Since the project is certified as important for defense purposes, it may be exempted from the standard wage schedule requirements.

WPA in-plant trainee learns welding on the job

operating techniques necessary to qualify them for full-time employment at a specific job. When the plant authorities decide that the trainees are capable of assuming responsibility for the jobs (within the limits of the maximum four-week training period) they are transferred to the plant pay rolls at regular wage rates. Under this program WPA workers, both men and women, are being trained for a variety of jobs ranging from those required in airplane and parachute production to lens grinding and instrument making.

The in-plant training program has proved particularly successful. It has greatly facilitated the replacement of WPA workers in industrial jobs because it provides training in the techniques of the specific job for which the worker is needed and because only a relatively short period of objective training is necessary. So far, nearly all the WPA workers who have received this type of training have obtained private employment.

### Airport Servicemen

Another type of WPA defense vocational training has been provided through the nationwide project established in the latter part of 1940 to train persons certified to the WPA for the occupation of airport servicemen. The project was sponsored by the Advisory Commission to the Council of National Defense. The Civil Aeronautics Administration and the United States Office of Education are cosponsors. The CAA selects and approves the airports to be used as training sites, and the United States Office of Education undertakes the selection and training of instructors and the outlining and supervision of the training techniques. The WPA is responsible for the administration of the project; the assignment and compensation of instructors; the selection, assignment, and compensation of trainees; and other functions usually necessary to the operation of a project in accordance with established WPA procedures.

Candidates for training as airport servicemen must be certified as eligible for WPA employment, and must qualify in interest, health, education, and experience. Training is available only for men between 18 and 35 years of age

WPA airport servicemen trainees tying down a plane

(in accordance with current airport employment policies) who have good eyesight and hearing and at least the equivalent of an eighth-grade education. Experience in dealing with the general public and hobbies involving manual dexterity are desirable qualifications for trainees.

Trainee groups receive instruction in maintenance and service duties from trained instructors. The subject matter ranges from taxiing and fueling of planes to the care of parachutes and procedures to be followed when crashes occur. Trainees are taught safety measures and first aid and acquire experience in directing traffic and in other field operations. They also learn to handle various types of airport equipment, such as wind indicators and obstruction lights; to fill out necessary forms and records; to assist in the overhauling of engines; to follow Federal, state, and local field regulations; and to utilize weather reports and radio communications. This practical training is usually supplemented by elementary work in navigation, meteorology, the theory of flight, and related subjects. The training is given to groups of from 10 to 15 men for a period of 90 days.

These projects ordinarily are organized to operate only once at an airport. The training course may be repeated at an airport, however, as long as the demand for the services of trained men continues. Airport servicemen training courses were organized in 46 airports located in various parts of the country during the fiscal year 1941. By the end of June 1941, 21 courses had been completed and in five centers courses were being repeated. It is known that approximately 70 percent of the enrollees in these

courses during fiscal year 1941 who completed their training received employment. The remainder serve as a reservoir of trained men for employment in the near future.

### Training of Nonprofessional Hospital Workers Under the Welfare Program

A WPA activity initiated during the 1941 fiscal year was the project for training nonprofessional workers in hospitals and institutions. This project is operated under the health section of the WPA welfare program. Workers of this type had previously been made available to some institutions under WPA institutional service projects. These activities have been expanded, however, as a part of the broad national defense plan, to include the training of workers. The training was begun during the latter part of the fiscal year in response to requests from various Federal agencies, hospital superintendents, health officers, and other groups in this field. These requests are the outgrowth of the pressing need for trained nonprofessional workers such as ward helpers, orderlies, and other assistants to give elementary care to the sick under professional supervision in hospitals and institutions.

Under the expanded program a thorough six-month training course is given to qualified workers who have been certified as eligible for WPA employment. The program is intended to make available a sufficient number of workers to assist under professional supervision in times of national emergencies such as war, epidemics, natural disasters, and social dislocations caused by peacetime mobilization.

Nonprofessional hospital workers cleaning and sterilizing surgical instruments and hospital supplies

To be eligible for nonprofessional hospital workers' training, applicants must be between 22 and 50 years of age and must have at least the equivalent of an eighth-grade education. Additional requirements are good health, good standards of physical hygiene, ability to perform manual tasks, and an interest in finding employment in this field.

The training is given in public hospitals and in private hospitals operated by nonprofit organizations. General hospitals are preferred. The hospitals selected must have adequate facilities for training and demonstrations and a hospital staff sufficiently large and with sufficient free time to permit its members to direct the training program.

Teachers and demonstrators are drawn principally from the hospital staff but are augmented, as necessary, by qualified members of health departments and other health agencies. In addition to supplying the teaching staff and technical supervisors, the hospital and sponsor are responsible for the provision of space and for supplying equipment and other facilities required for the operation of the project. The WPA is responsible for the selection and assignment of qualified workers, general supervision, timekeeping, payment of wages, and referrals for employment.

An attempt is made through the training courses to develop a number of skills on the part of individual trainees so that they may be available for a variety of duties. They receive elementary training in the care of the sick—such as answering call bells, carrying meal trays, cleaning, and doing odd jobs—and learn to perform nonprofessional services for the patients at the direction of a nurse. They are also given training in institutional kitchen and serving-pantry work and in institutional housekeeping. The program includes instruction in personal care, work relationships, and behavior relating to hospital or institutional service. Classroom work and actual experience are closely coordinated during the training period.

Experience with completed training programs shows that a large proportion of the trainees secure private employment at the close of the training period, either on the sponsor's regular staff, or in other public or private hospitals and institutions.

## Household Workers

Authority to provide training for domestic workers was given to the WPA under the ERA Act of 1939. Projects that have been set up for this purpose have the double objective of training workers for jobs in a field in which shortages exist and providing jobs for unemployed persons—the teachers, supervisors, and other personnel engaged in the operation of the project.

The household workers' training projects undertaken by the WPA have been sponsored by state and local public welfare and health agencies. Usually they are developed with the assistance of advisory committees composed of representatives of local workers' organizations and leaders in the community. The advisory committees, working through subcommittees, assume responsibility for providing housing, furnishings, and equipment for the project, for the recruiting of trainees, and for the standards that are adopted as a basis for the subsequent employment of the trainees.

One of the major requirements for this type of project is suitable quarters, so that training conditions will approximate as closely as possible the working conditions in the homes where the trainees will later be employed. Frequently, the necessary equipment and furnishings are loaned by local utility companies and merchants. WPA furniture projects often supply furniture; craft projects furnish hooked rugs, block-printed draperies, and table linens; and art projects provide etchings and paintings for interior decoration.

On most of the projects, 12 weeks of training are provided under the supervision of persons experienced in the field of home economics. The trainees receive instruction in routine household work and in the preparation and serving of meals. Some projects provide elementary training in child care. On such projects the trainees spend some time at the local WPA nursery school, where they learn to bathe, feed, and care for small children.

Enrollment in the household workers' training course (for which preference is given to persons between 18 and 35 years of age) is not limited to persons certified as eligible for WPA employment. Other persons registered

Correct methods of performing household tasks are taught on WPA household workers' training projects

with local public employment offices or other approved agencies and young persons employed on the out-of-school work program of the National Youth Administration are also eligible for training. Persons eligible for WPA employment, however, usually make up between a fourth and a third of the total enrollment. Most of the trainees that are selected from WPA rolls are paid half the scheduled unskilled "B" rate applicable to the locality in which the project is located. The WPA does not make wage payments to the noncertified persons who receive training. During the fiscal year 1941, about 3,000 persons completed the training course, and 2,800 were placed in jobs.

## Vocational Training Under the Adult Education Program

Vocational training carried on under the adult education program is designed to utilize the services of unemployed teachers certified or awaiting assignment to WPA rolls. Like other WPA educational programs, it is conducted in close cooperation with state departments of education and local school districts. The classes included under this program have provided vocational training in many fields for large numbers of both employed and unemployed persons. Many of the unemployed persons came for training that in many instances enabled them to obtain employment. Of the persons who were employed when they enrolled, some came in order to attain greater skill in their current occupation and some to learn new skills that would fit them for different kinds of employment.

Enrollment in adult education classes totaled about 113,000 in April 1941. (None of the enrollees receive compensation from the WPA for attending these classes.) More than half the enrollment was in commercial subjects such as business English and arithmetic, accounting, bookkeeping, stenography, typing, and the use of office machines. Relatively large numbers of persons were enrolled in classes devoted to

carpentry and woodworking and mechanical subjects such as tool making, welding, radio and telegraphy, mechanical drafting, and electrical work. Still others took courses in sewing and needlecraft, cooking, table-waiting, cleaning, pressing, and laundry work. Painting, plumbing, masonry work, watchmaking, and cosmetology were also occupations in which many persons received instruction.

# EMPLOYMENT AND EARNINGS

**P**ROJECTS financed from WPA funds provided jobs for an average of 1,700,000 workers during the fiscal year 1941. This was the smallest annual average in the six years of the Work Projects Administration's history. It was about 17 percent less than the average employment during the preceding fiscal year and nearly 44 percent less than that for 1939.

Monthly changes within the 1941 fiscal year followed approximately the same pattern as in the two preceding years, with employment starting from a relatively low level in the summer months and reaching a higher level during the winter. In July 1940, about 1,655,000 workers were employed on WPA projects. By January 1941 the number had risen to 1,890,000, but subsequent monthly reductions brought employment down to an average of 1,400,000 in June,<sup>1</sup> the lowest recorded since October 1935, when the WPA program was just getting under way.

From October 1935 the program had expanded rapidly until in February 1936 slightly more than 3,000,000 persons were at work on WPA projects. The general downward trend that occurred in subsequent months was reversed in the summer of 1936 by a marked but temporary increase in WPA employment to aid farmers in need as a result of the severe drought that had caused extensive damage in many sections of the country. By the fall of 1937, WPA employment had reached the low level of less than 1,500,000, reflecting the declines in unemployment that had occurred throughout the year. The subsequent sharp rise in the

number of WPA workers in 1938 likewise was associated with changes in unemployment which had begun to increase rapidly at the end of 1937. Need for employment during 1938 was accentuated by the unusually low incomes of southern tenant farmers and laborers and by the New England hurricane in September of that year. During most of 1939, however, the trend of WPA employment was downward from a total of about 3,000,000 workers in the first quarter to about 1,700,000 in September. The numbers employed increased during the remainder of that year to meet seasonal increases in unemployment and need, but by June 1940 WPA employment had dropped to about the same level as that of the preceding September.

The relatively low level of WPA employment throughout the fiscal year 1941 was the result of smaller appropriations and declining unemployment, which in turn reflected the expansion of employment in private industries, particularly those engaged in defense work. A large volume of unemployment, however, has continued to exist. According to sample surveys conducted by the WPA, about 5,900,000 persons were unemployed in June 1941 as compared with 8,600,000 in June 1940.<sup>2</sup>

---

<sup>1</sup> The WPA survey of unemployment was initiated in April 1940 by the WPA Division of Research. The estimates are obtained directly, on the basis of personal interviews with a representative cross section of the national labor force each month, rather than by means of indirect estimates of labor supply and employment; the sampled households were selected at random within a group of 54 sample counties located in 38 states. For the fiscal year 1941, the WPA estimates averaged somewhat higher than those of the National Industrial Conference Board, but lower than those of the Congress of Industrial Organizations, the American Federation of Labor, and the Alexander Hamilton Institute. Publication of the National Industrial Conference Board estimates was suspended in June 1941, and of the American Federation of Labor estimates a month later.

<sup>2</sup> WPA employment was reduced to a little more than 1,000,000 in July 1941, the first month of the fiscal year 1942.

CHART 3

**EMPLOYMENT ON WPA PROJECTS\***

Through June 1941

\* Includes persons employed on WPA projects operated by other Federal agencies.

WPA 4017

A considerable number of the workers who are unemployed at any given time may not be in need of WPA employment. Some workers receive unemployment compensation payments. Others are able to accumulate reserves or can depend on assistance from other family members or from relatives to carry them through several weeks or months of unemployment. Some workers have no resources to fall back upon, however, and are in need of assistance as soon as they become unemployed. Seasonal increases in the need for fuel and clothing intensify the hardships of unemployment and heighten the need for WPA jobs. Droughts, crop failures, floods, and other disasters may sometimes force large numbers of farmers and other workers to apply for WPA employment to tide them over periods of acute need.

Throughout its period of operation the WPA has been able to provide jobs only for those most urgently in need of employment. In 1936, the number employed by the WPA was equivalent

to about a third of all unemployed workers, but the ratios for subsequent years were successively lower. In 1940 and the first half of 1941 less than one out of every four unemployed workers obtained a WPA job. The WPA appropriation for the fiscal year 1941, like the earlier appropriations, was insufficient to provide work for many heads of families who had been found, upon local investigation, to be in need and eligible for WPA jobs. Despite the year's reduction in unemployment, it is estimated by public welfare and relief agencies (the agencies responsible for determining whether applicants for WPA employment are in need) and by the State Work Projects Administrations that at the end of the fiscal year 1941 there were more than 1,000,000 persons eligible for WPA employment who could not be employed because of limited funds.

The increase in private employment that occurred between June 1940 and June 1941 was not evenly distributed throughout the country.

Nonagricultural employment, according to the United States Bureau of Labor Statistics, increased by about 20 percent in six states, most of which are located on the eastern seaboard. In four states in the west central part of the country, however, the increases represented less than 5 percent. Several states that are predominantly agricultural showed fairly large relative increases in nonagricultural employment, but because this type of employment represented only a small proportion of the total number of workers in the state, the effect of the increases was not as great as in the more industrialized states.

Changes during the year in manufacturing employment in large urban areas with 1930 populations of 100,000 or more also varied widely. In several of these cities, particularly

those that are centers of aircraft production, the increases amounted to more than 50 percent. On the other hand, in seven of the cities increases of less than 10 percent were recorded.

Even more extreme variations in employment trends could be observed in certain smaller centers. Where plants for the manufacture of defense materials have been constructed, small rural communities have become boom towns. In many areas, however, there has been little defense activity and little opportunity to participate in the accompanying increases in employment and income.

The difference in the extent to which national defense production has affected the several areas of the country is indicated by the concentration of primary defense contracts in the major industrial areas. Nearly two-thirds of

<sup>A</sup> Data represent averages of weekly employment counts made during the months.<sup>B</sup> Financed by allocation of WPA funds.<sup>C</sup> Average for last three weeks.

the value of primary contracts awarded by the War and Navy Departments through June 1941 went to plants in 20 industrial areas that included only 27 percent of the country's population and only 23 percent of WPA employment in June 1941.

To meet the divergent trends in employment and need, a substantial shift was made in the state distribution of WPA employment during the fiscal year. The national decline from June 1940 to June 1941 amounted to 21 percent. Reductions of more than a third occurred in five eastern states, and decreases amounted to more than a fourth of the June 1940 figure in 12 other states. These states included most of the New England and Middle Atlantic states, of the industrial states of the Middle West, and of the West Coast states. Reductions in WPA employment in the agricultural states of the Middle West and South were considerably smaller, amounting to less than 10 percent in nine states.

The relative number of WPA workers in the large population centers has, in general, been declining during the past several years—a trend that was emphasized in 1941 by the expansion in business activity associated with the development of the defense program. At the end of June 1941 only 37 percent of the WPA workers were employed in metropolitan counties containing cities of more than 100,000 population. The same areas included 40 percent of the WPA workers in June of the previous year and nearly 46 percent in June 1938. This decline in WPA employment in the large population centers was offset by proportionate increases in the counties with medium-sized and small cities and in rural counties. The percentage of total WPA workers employed in counties whose largest city had a population of between 25,000 and 100,000 rose from 15 to 17 during the period from June 1938 to June 1941, and the percentage in counties with cities having between 5,000 and 25,000 inhabitants increased from 22 to 26. The increase in rural counties with no town of as many as 5,000 inhabitants was from 18 to 21 percent of the total number of WPA project workers.

Approximately 96 percent of the persons employed on WPA projects at the end of June 1941 were certified workers referred to the WPA by

local relief agencies. The remainder were non-certified workers employed in supervisory jobs or in jobs for which workers with the required skills were not available among the certified group. Some of the supervisory workers had originally been certified as being in need but such workers lose their certification status when they are promoted to supervisory jobs.

TABLE 7. PERCENTAGE DISTRIBUTION OF PERSONS EMPLOYED ON PROJECTS OPERATED BY WPA, BY SIZE OF COMMUNITY

<sup>a</sup> Community groupings are based on a classification of counties according to the population of the largest municipality in each county. Since March 1941 the classification of counties has been based on the 1940 population of the municipalities; prior to that time the 1930 population was used.

The appropriation acts have established as criteria for eligibility that the worker must be in need, employable, and an American citizen. Administrative provisions require also that the member of the family who is seeking WPA employment (only one member of a family can be employed) must be at least 18 years of age and that he must register at the local public employment office.

## Labor Turnover on WPA Projects

The labor turnover that has been characteristic of the WPA program was marked during the fiscal year 1941 by an unusually large volume of voluntary separations, particularly in the last

quarter of the year. Voluntary separations averaged more than 132,000 per month during this quarter. Whereas in the two previous years voluntary separations had never exceeded 7 percent of the employment at the beginning of the month and in most months represented about 4 percent, the ratio for the months of the last quarter of 1941 averaged about 9 percent. Most voluntary separations were made in order to accept jobs in private industry but small numbers were made for other reasons, such as illness, injury, or new sources of income.

Among the causes of turnover during the fiscal year was the separation of workers from WPA jobs for military service. In the nine months from October 1940 through June 1941 about 8,000 WPA workers left WPA employment for this reason. Separations for military service averaged less than 1 percent of the number of men employed on WPA projects. This comparatively small proportion reflects the fact that the great majority of WPA workers are over draft age and that nearly all of them have dependents.

TABLE 8. NUMBER OF ASSIGNMENTS TO AND SEPARATIONS FROM EMPLOYMENT ON WPA PROJECTS <sup>A</sup>

CONTINENTAL UNITED STATES

MONTHLY, JULY 1938-JUNE 1941

| Month       | Assignments |                     |               | Separations |                        |                        | Separation rate (percent) <sup>B</sup> |                                        |
|-------------|-------------|---------------------|---------------|-------------|------------------------|------------------------|----------------------------------------|----------------------------------------|

### ASSIGNMENTS AND SEPARATIONS IN EMPLOYMENT ON WPA PROJECTS\*

July 1938 - June 1941

\* Includes persons employed on WPA projects operated by other Federal agencies.

WPA 4018

The provision requiring the termination of the employment of all workers, except war veterans, who had been continuously employed on the WPA for 18 months was included, with certain modifications, in the appropriation act for the fiscal year 1941 (see page 13). The numbers of separations made under this provision, however, have been small during most months of this year and accounted for about one-eighth of the total separations in the 12-month period.

Separations from WPA employment for all reasons averaged about 236,000 per month during the 1941 fiscal year. The monthly figures for this period ranged from about 166,000 in November and December 1940 to 384,000 in June 1941, the largest number reported for any month since August 1939. The June separations represented more than a fourth of the employment at the beginning of the month. The separation rate for the fiscal year 1941 as a whole averaged a little over 14 percent as compared with an assignment rate of slightly less than 12 percent.

The monthly total of assignments during the fiscal year ranged downward from 253,000

to 136,000, or from 16 to 9 percent of employment at the beginning of the month. Approximately one-sixth of the assignments made during the year were initial assignments of persons new to the program, and the remainder were reassignments of workers previously separated from WPA employment. The majority of the reassigned persons had left WPA jobs for private employment but were in need because of the loss of such employment and therefore entitled to immediate reassignment under the terms of the ERA act for the fiscal year 1941.

In the six years of operation of the WPA program more than 8,000,000 different persons have been employed on projects financed from WPA funds. The first year accounted for more than 3,000,000 of this total. The severe drought that occurred during the second year resulted in the assignment to WPA jobs of large numbers of farmers who had not previously been employed on the program. A large volume of initial assignments also occurred in 1938, when WPA employment was increased to meet the almost unprecedented rise in unemployment that developed during the 1937-38

WPA 4019

recession. Again in the summer of 1939, when the employment of large numbers of WPA workers was terminated because they had been continuously employed for 18 months or more, the many replacements made included large numbers of workers who were new to the WPA program. The fiscal year 1941 added only about 400,000 persons who had not previously been employed on WPA projects, the smallest number of additions made during any year of the program's operation.

## Employment on WPA Projects Operated by Other Federal Agencies

Although the great majority of all WPA jobs have been provided on projects operated by the WPA, some of them have been on projects operated by other agencies of the Federal Government. Employment on such projects during the fiscal year 1941 averaged less than 3 percent of total WPA employment. In July 1940, about 45,000 persons were employed on Federal

<sup>A</sup> Data represent averages of weekly employment counts made during the months.

<sup>B</sup> Public land inventory projects operated by the National Resources Planning Board of the Executive Office of the President with 1938 Act funds were continued with 1939 Act funds originally allocated to the National Resources Planning Board and subsequently transferred to the General Land Office of the Department of the Interior.

agency projects as compared with a total of 86,000 in the preceding month. Part of this reduction represented the transfer of projects previously operated by other Federal agencies to the state programs operated directly by the WPA. The largest average monthly employment on Federal agency projects during the 1941 fiscal year (56,000) was recorded in September. By June 1941 employment on these projects had dropped to 41,000.

More than three-fourths of the workers on other Federal agency projects in June 1941 were working under the supervision of three major agencies: the War Department, the Navy Department, and the Department of Agriculture. Projects operated by the Quartermaster Corps of the War Department provided jobs for nearly 9,400 WPA workers, and those of the Navy Department's Bureau of Yards and Docks employed about 8,200 persons. About 6,500 and 6,200 workers, respectively, were working on projects of the Bureau of Entomology and Plant Quarantine and of the Forest Service, both of the Department of Agriculture. The National Park Service of the Department of the Interior and the Soil Conservation Service of the Depart-

ment of Agriculture were the only other Federal agencies providing jobs for more than 1,000 persons on WPA projects.

Two major types of activity predominated among the projects operated by other Federal agencies. The first comprised the construction and repair of army forts and naval and air bases, under the direction of the Quartermaster Corps of the War Department and the Bureau of Yards and Docks of the Navy Department. The second consisted of work directed toward the conservation and improvement of natural resources; these projects were conducted by the Soil Conservation Service, the Forest Service, and the Bureau of Entomology and Plant Quarantine, all three of the Department of Agriculture, and the National Park Service of the Department of the Interior. In June 1941, between 18,000 and 19,000 persons were employed on each of these major types of activity. Projects providing employment for white collar workers in research and statistical work accounted for a large share of the remainder.

### Employment by Types of Projects

Projects operated under the WPA program cover a wide variety of activities and utilize the skills of workers with a wide variety of occupational backgrounds and training, reflecting differences among communities in the kinds of public facilities and services needed and in the occupational skills and abilities of local unemployed workers eligible for WPA jobs. The projects included both construction and nonconstruction activities and both defense and nondefense work.

Continuing the pattern of previous years of WPA operations, the great majority of project workers in the fiscal year 1941 were employed on construction projects. Since the beginning of the program, however, there has been a gradual increase in the relative numbers of persons employed on nonconstruction projects. At the end of the 1940 fiscal year, 74 percent of all workers employed on projects operated by the WPA were engaged in various types of construction work, but at the end of June 1941 construction projects accounted for only 68 percent of all project workers. A considerable part of the decline, however, may be attributed

Employment on airport projects was greatly increased in 1941; these workers are laying concrete for a turning circle

to the employment on the national defense vocational training project of a number of workers (representing about 3 percent of the total) who would normally be engaged on projects of construction types.

A considerable share of WPA project work during the 1941 fiscal year was directed toward defense objectives, and the emphasis placed on this type of activity continued to increase throughout the year. At the beginning of the year about 14 percent of all WPA workers were employed on projects that were considered important to the national defense. By June 1941 about 30 percent of the total, or 419,000 persons, were working on defense projects including those operated by other Federal agencies with WPA funds. Most of the defense workers (83 percent) were employed on various kinds of construction projects, such as those for the development of access roads, airports, and facilities at military and naval reservations. The remaining 17 percent were engaged in activities outside the construction field that were of value in the defense program. Among these were the workers being trained for occupations needed in defense industries.

Although the WPA's participation in the national defense effort increased the emphasis placed on some kinds of projects and consequently raised the percentage of workers employed on them, it did not radically change

Projects for the improvement of roads provide jobs for large numbers of WPA workers

the relative importance of the major types of projects. Projects for the construction or improvement of highways, roads, and streets continued to account for the largest share of the total employment on projects operated by the WPA. Employment on these projects, however, represented only 36 percent of total employment in June 1941, as compared with about 43 percent a year earlier.

Projects for the construction of public buildings provided jobs for nearly 10 percent of all WPA workers at the end of June 1941. These projects involved the construction or

<sup>B</sup> Separate data are not available; included in research and records.

renovation of school buildings, municipal buildings, and various structures designed for recreational purposes, as well as armories, airport buildings, and buildings at military and naval establishments that are of value for defense.

Almost as large a share (9 percent) of the WPA workers were employed on public utilities projects as were engaged in work on buildings. The utilities projects, however, provided a slightly smaller percentage of the WPA jobs than they did a year earlier, when 10 percent of the workers were so employed. Projects for the improvement of sewage collection and disposal facilities accounted for a large part of the 120,000 workers who were working on publicly owned or operated utilities in June 1941. Construction of water purification and supply systems also provided jobs for large numbers of workers.

Development of airports and airway facilities provided jobs for about 5 percent of all WPA workers at the end of June 1941 (Table 11). Nearly 68,000 persons, representing several times as large a share of the total employment as in the preceding year, were employed on these projects.

All the other major groups of construction projects employed a slightly smaller proportion of the WPA workers in June 1941 than a year earlier. Projects for the construction of recreational facilities such as parks, playgrounds, and athletic fields provided jobs for some 51,000 persons, or about 4 percent of the total. Conservation of natural resources—chiefly work to prevent erosion and facilitate water conservation—required 29,000 workers. In addition, about 15,000 workers were engaged in sanitation work including improvement of drainage systems and malaria control activities.

More than 373,000 workers, or about 28 percent of the WPA total at the end of June 1941, were employed on community service programs covering a variety of activities in the non-construction field. Most important among these, in terms of employment, were community welfare activities. These included projects for the operation of sewing rooms in which large numbers of women were employed in the production of clothing and household goods for distribution to needy families and public institutions. Other welfare activities included

the preparation of hot lunches for school children, the provision of housekeeping aides to assist needy families when the regular homemaker was ill or some other emergency existed, and public health and hospital work.

Public activity projects, which made a variety of educational, recreational, and cultural opportunities available to the public, provided jobs for large numbers of WPA workers. Some of these workers conducted literacy, naturalization, and other adult education classes or assisted in the operation of nursery schools. Others were employed on projects that sup-

plemented local library services or on locally sponsored art, music, and writing programs. In addition, many WPA employees were working on research, survey, and records projects that provided assistance for various activities of governmental agencies, universities, and other public agencies or were being trained for occupations needed in defense industries. (The defense training project is described in some detail in another section of this report.) The numbers of workers engaged in these activities at the end of June 1941 are shown in Table 11.

The kinds of WPA projects undertaken differ in relative importance from state to state. In all the states more than half the WPA workers in June 1941 were engaged in work on construction projects, and the proportion ranged as high as three-fourths in nine states. The major types of projects, however, showed a wide range in relative importance. Barely a sixth of all WPA workers in Maine, for example, were employed on the construction or repair of highways, roads, and streets, but such projects accounted for over three-fifths of all WPA jobs in Arkansas. The construction and improvement of airports and airways required the work of half the WPA workers in Maine but less than 5 percent of the total in a majority of the states. Sewing projects employed 1 out of 5 WPA workers in New Hampshire but only 1 out of 100 in Tennessee.

During the course of the year changes occurred in the distribution of WPA employment by type of project in most states and in the country as a whole. Weather conditions influence the numbers that can be employed on outdoor construction work, particularly in the northern states. Changes in the level of WPA employment and in the occupational qualifications of the workers in need of jobs cause fluctuations in the proportions that can be effectively employed on the several types of projects. An additional factor during the past year has been the emphasis on projects that are important to national defense. Although these activities did not produce any radical change in the distribution for the country as a whole, they did effect marked changes in a number of states. The number of workers employed on the major types of projects at the end of June 1941 is shown by states in Appendix Table IV.

## Hours and Earnings of WPA Workers

During the fiscal year 1941 the standard schedule of wages, as developed in accordance with provisions of the ERA Act of 1939, continued in force. This act had specifically provided that "the monthly earnings schedule shall not be varied for workers of the same type in different geographical areas to any greater extent than may be justified by differences in the cost of living." The three bases for differentiation in wages that had been adopted at the beginning of the WPA program continued to apply: the degree of skill required for the job to which the worker is assigned; the section of the country in which he lives; and the degree of urbanization of the county in which he is employed.

Variation in wages on the basis of skill is provided by five wage classes—unskilled "B," unskilled "A," intermediate (semiskilled), skilled,

Wage Region I—Connecticut, Delaware, District of Columbia, Illinois, Indiana, Iowa, Kansas, Maine, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, New Hampshire, New Jersey, New York, North Dakota, Ohio, Pennsylvania, Rhode Island, South Dakota, Vermont, West Virginia, Wisconsin.

Wage Region II—Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, Wyoming.

Wage Region III—Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia.

<sup>a</sup> Since March 1941 the classification of counties has been based on the 1940 population of the municipalities; prior to that time the 1930 population was used.

and professional and technical. Geographic differences are taken into consideration through the division of the continental United States into three wage regions: Region I, covering the northeastern and north central parts of the country; Region II, the western states; and Region III, the southeastern and south central sections. A separate wage schedule has been established for the territories and possessions. To provide for the third basis, variation in the degree of urbanization, the counties within each region are grouped according to the population of their largest municipalities: 100,000 or more; 25,000 to 100,000; 5,000 to 25,000; and less than 5,000.<sup>3</sup> The variations in wages on these bases, from \$31.20 for the least skilled workers in the rural counties of Region III to \$94.90 for highly skilled professional and technical workers in the largest cities of Regions I and II, are indicated in the accompanying schedule (Table 12).

The necessity for a certain degree of flexibility in the application of the wage schedule has been recognized. To allow for the higher cost of living in areas adjacent to large urban centers, adjustments in wage rates have been authorized for counties or parts of counties included in metropolitan districts as defined by the census. Special adjustments in wage rates may also be applied temporarily to individual projects on which the entire labor force or a major portion of it commutes to work from a county with a higher living cost.

Under current statutory provisions all project wage employees, with certain specific exceptions, are required to work 130 hours per month but not more than 8 hours in any day or 40 hours in any week. Exemptions from the limitation on hours of work are permitted by law to protect work already done on a project, to make up time lost because of illness or factors beyond the worker's control, to meet an emergency (such as flood or hurricane) involving the public welfare, and to expedite work on projects certified by the Secretary of War or the Secretary of the Navy as being important for military or naval purposes.

Under the provision made for certified defense projects, the Commissioner of Work

Projects in March 1941 authorized state WPA administrators to raise the working schedule on certified defense construction projects up to 48 hours per week, with a proportionate increase in monthly earnings. This authority may be used only when all other means (such as the use of multiple shifts, the employment of additional workers by the project sponsors, or the use of additional equipment) are found to be inapplicable or insufficient. Permission has also been granted to state administrators to exempt certain categories of WPA trainees from the standard limitation of hours and earnings.

TABLE 13.—NUMBER OF HOURS WORKED ON PROJECTS OPERATED BY WPA, BY MAJOR TYPE OF PROJECT

CUMULATIVE THROUGH AND YEAR ENDING JUNE 30, 1941

| Type of project                               | Cumulative through June 30, 1941 |          | Year ending June 30, 1941 |          |
|-----------------------------------------------|----------------------------------|----------|---------------------------|----------|
|                                               | Number                           | Per cent | Number                    | Per cent |
| Total                                         | 16,895,179,744                   | 100.0    | 2,476,654,470             | 100.0    |
| Highways, roads, and streets                  | 6,801,680,825                    | 40.2     | 948,321,332               | 38.3     |
| Public buildings                              | 1,378,697,853                    | 8.2      | 224,060,315               | 9.0      |
| Recreational facilities (excluding buildings) | 1,297,009,253                    | 7.7      | 110,322,356               | 4.4      |
| Publicly owned or operated utilities          | 1,581,960,385                    | 9.4      | 252,632,362               | 10.2     |
| Airports and airways                          | 284,822,160                      | 1.7      | 76,160,604                | 3.1      |
| Conservation                                  | 677,596,790                      | 4.0      | 60,782,909                | 2.5      |
| Sanitation                                    | 127,768,456                      | 2.5      | 31,064,116                | 1.3      |
| Sewing                                        | 1,518,727,277                    | 9.0      | 176,262,590               | 7.1      |
| Community service (excluding sewing)          | 2,422,775,704                    | 14.3     | 490,113,954               | 19.8     |
| National defense vocational training          | 40,183,853                       | 0.2      | 40,183,853                | 1.6      |
| Miscellaneous                                 | 163,959,188                      | 2.7      | 66,450,919                | 2.7      |

In June 1941, 12 percent of all WPA workers were working under these exemptions. Exempted employees were most numerous on airport and airway and public buildings projects. More than three-fourths of the airport workers and a third of the persons employed on public buildings projects at the end of June 1941 were exempted from the standard limitation of hours and earnings. These two groups together represented 60 percent of all exempted employees at that time.

The monthly average of scheduled hours for all project wage employees has risen in recent months, largely because of these exemptions. The increase in the number of exempted workers, together with changes in the proportion of workers assigned in the various wage classes, has also resulted in a rise in average full-time

<sup>3</sup> Prior to March 1, 1941, the classification of counties was based on the Fifteenth Census of the United States, 1930. Population. Since that date the Sixteenth (1940) Census has been the basis of classification.

monthly earnings of all WPA workers. In June 1941, full-time earnings averaged \$59.60, as compared with \$56.40 in June 1940. The average scheduled monthly hours and earnings of WPA workers are somewhat greater than the average number of hours actually worked and amount of earnings actually received. The difference is attributable chiefly to loss of time because of illness or other reasons and to interruptions in project operation or transfer between projects.

During the fiscal year 1941, all WPA project employees (including project supervisors) earned a total of approximately \$1,119,800,000, for which they worked about 2,476,700,000 hours (Table 13). The hours worked amounted to 34 percent less than the total hours for the fiscal year 1939, the peak year in terms of hours earnings, and average employment, and to 15 percent less than the total for 1940. Total earnings for 1941 represent the lowest annual figure since the first year of WPA operations and are 40 percent less than the 1939 total and 13 percent less than the total earnings for the fiscal year 1940.

## WPA Jobs in the Various Wage Classes

Persons employed on WPA projects differ greatly in their occupational backgrounds and range from unskilled workers to professional and technical personnel. Unskilled workers are most adversely affected by unemployment and they have always been the most numerous group among WPA employees. At the end of June 1941 persons assigned in the unskilled wage class represented about 61 out of every 100 WPA workers. Of the 61 unskilled workers, 55 were assigned in the unskilled "A" wage class (chiefly manual laborers) and 6 were in the unskilled "B" wage class (which includes such workers as charwomen, messengers, and janitors).

The remainder of the WPA workers in June 1941 were assigned to jobs requiring a higher degree of skill. About 17 percent were in the intermediate (semiskilled) wage class. In this class are found helpers to skilled or professional and technical workers; operators of power-driven equipment and tools requiring repetitive manipulation (such as graders and jack hammers); and most office machine operators.

TABLE 14. PERCENTAGE DISTRIBUTION OF PERSONS EMPLOYED ON PROJECTS OPERATED BY WPA, BY WAGE CLASS

SELECTED PERIODS, JUNE 1936-JUNE 1941

| Period        | Grand<br>total | Project wage employees |             |              |              |                   |         |                                    | Project<br>super-<br>visory<br>employees |

<sup>a</sup> With the inauguration of the new schedule of monthly earnings on September 1, 1939, as prescribed in General Order No. 1, the unskilled wage class was divided into two groups: group "B," including workers assigned jobs of a routine, simple, nonhazardous nature, and group "A," including workers assigned to types of work normally done by construction and general laborers and to routine clerical work.

\* Data are based on pay rolls ending during the first half of the month.

TABLE 15. PERCENTAGE DISTRIBUTION OF PERSONS EMPLOYED ON PROJECTS OPERATED BY WPA, BY TYPE OF PROJECT AND BY WAGE CLASS

JUNE 25, 1941

| Type of project                               | Grand total | Project wage employees |           |           |           |              |         |                            | Project supervisory employees |
|-----------------------------------------------|-------------|------------------------|-----------|-----------|-----------|--------------|---------|----------------------------|-------------------------------|
|                                               |             | Total                  | Unskilled |           |           | Intermediate | Skilled | Professional and technical |                               |
|                                               |             |                        | Total     | Group "B" | Group "A" |              |         |                            |                               |
| Total                                         | 100.0       | 95.1                   | 61.3      | 6.1       | 55.2      | 17.3         | 13.5    | 3.3                        | 4.6                           |

(A) Less than 0.05 percent.

Nearly 14 percent were in the skilled wage class, which includes such widely varied occupations as those of carpenter, roofer, power-shovel operator, and sheet-metal worker. Workers assigned to jobs in the professional and technical wage class which made up about 3 percent of the total are architects, engineers, registered nurses, writers, and others with considerable training in recognized professional, scientific, and technical fields. The remaining 5 percent represented supervisory personnel.

Some of the WPA women workers are employed on canning projects

The number of workers assigned to the unskilled wage classes has been relatively largest when total employment is high and smallest when employment is at a low level. In September 1938, for example, when WPA employment was near its peak, workers in the unskilled group represented about 72 percent of all project employees. When WPA employment reached its lowest level at the end of June 1941, however, only 61 percent of the workers were in the unskilled wage classes. At that time about 17 percent were assigned to the intermediate group as compared to 12 percent in September 1938. Workers assigned to the skilled wage class represented about 13 percent of total employment in June 1941 and 11 percent in September 1938.

In general, unskilled workers make up a larger share of the WPA employment in rural than in urban areas. Workers assigned in the unskilled wage classes at the end of June 1941 represented nearly 68 percent of the project employment in rural counties where the largest town had less than 5,000 inhabitants. In the highly urban counties containing cities with 100,000 or more inhabitants, however, barely 56 percent of the workers were in the unskilled group. Workers assigned to the intermediate

wage classes represented about 16 percent of the employment in the rural counties and 19 percent in large urban communities. These differences between urban and rural areas are closely related to the kinds of projects undertaken, which in turn reflect differences both in the kinds of facilities and services required and in the occupational backgrounds of the unemployed workers who are eligible for WPA jobs.

The various types of projects differ considerably in the kinds of workers they require. Projects for the construction or improvement of highways, roads, and streets utilize relatively more unskilled workers than any other kind of construction activity. Workers assigned in the unskilled wage classes represented 74 percent of the total on highway projects at the end of June 1941. Since this kind of improvement is most urgently needed in rural areas and also provides jobs for large numbers of unskilled workers, it makes up the greater part of the WPA program in the sparsely settled sections of the country. Public buildings projects, on the other hand, require relatively large numbers of highly skilled workers. More than 28 percent of the workers on these projects were assigned in the skilled wage class, and a little less than half of them were classified as unskilled. Community service projects as a group provided jobs for relatively large numbers of professional and technical workers. This was particularly true of the public activities projects, on which more than a fifth of the workers were teachers, artists, writers, musicians, and others assigned in the professional and technical wage class. These community service projects occupied a much more prominent position in the WPA programs of urban centers than in those of rural areas where few unemployed workers with experience in professional, technical, and clerical fields were eligible for WPA employment.

### Characteristics of WPA Workers

Employment opportunities in the labor market are determined to a considerable extent by such factors as sex, age, and race, as well as by the skill and experience of the workers. These factors do not affect eligibility for WPA employment except that the minimum age requirement is 18 years, but they are important in aiding or

impeding the return of WPA workers to private or other public employment. They are also a consideration in the selection of projects for the WPA program.

TABLE 16. NUMBER OF WOMEN EMPLOYED ON PROJECTS OPERATED BY WPA

QUARTERLY, DECEMBER 1935-JUNE 1941

|              | Date | Number  | Percent of all workers |
|--------------|------|---------|------------------------|

| June 29      |      | 372,058 | 13.3                   |
| September 28 |      | 409,954 | 13.1                   |
| December 28  |      | 405,665 | 13.5                   |
|              | 1939 |         |                        |
| March 29     |      | 391,442 | 13.6                   |
| June 28      |      | 352,784 | 14.6                   |
| September 27 |      | 251,071 | 14.6                   |
| December 27  |      | 333,620 | 16.1                   |
|              | 1940 |         |                        |
| March 27     |      | 367,062 | 16.6                   |
| June 26      |      | 243,276 | 15.4                   |
| September 25 |      | 264,611 | 16.1                   |
| December 26  |      | 323,288 | 17.7                   |
|              | 1941 |         |                        |
| March 26     |      | 312,128 | 18.8                   |
| June 25      |      | 254,814 | 19.2                   |

The great majority of the WPA workers are men. Women employed on WPA projects at the end of June 1941 made up a little more than 19 percent of the total employment. This proportion was the highest in the history of the program. A year earlier, when total employment was considerably higher, women represented only 15 percent of the workers, and in some earlier months the proportion was as low as 13 percent. The June 1941 ratio, however, was only slightly higher than those recorded during the autumn of 1937, when WPA employment was at a correspondingly low level.

Women workers constitute a smaller proportion of the total WPA employment than they do of the total national labor force. Data from the 1940 Census indicate that women made up nearly a fourth of all those in the labor force, as compared with 13 to 19 percent of the WPA workers during the various months since the

beginning of the WPA program. This difference reflects primarily the fact that most WPA jobs are given to heads of families.

The majority of WPA workers are over 40 years of age. A survey of all certified workers employed on projects financed from WPA funds at the end of April 1941 indicated that their median age was nearly 43 years. About one-third (32 percent) of the workers were under 35 years of age, nearly half (49 percent) in the middle age groups from 35 to 54 years, and the remainder, approximately one-fifth, were 55 years of age or older.

The women workers were slightly younger than the men, or 42 as compared with nearly

43 years of age on the average. The proportions of men and of women who were in the younger age group (under 35) were approximately the same. A larger proportion of the women than of the men was in each of the age groups ranging from 35 to 54 years and the opposite was true of the older age groups (55 years and over).

WPA workers in 1941 were considerably older, on the average, than all workers in the national labor force. The median age of all workers according to the 1940 Census was 36 years, as compared with nearly 43 years for the WPA workers. A part of this difference is attributable to the regulation preventing the employment of persons under 18 years of age on WPA projects. The fact that the programs of the NYA and the CCC provide jobs for young persons and the restriction of WPA jobs primarily to heads of families are also factors. If the comparison is limited to workers 18 years of age and over, the difference is reduced slightly. The median for workers in this more limited age group was about 37 years for all workers and 43 years for WPA workers.

The chief difference between the distributions of WPA workers and the total labor force occurs in the groups from 40 to 64 years of age. About 55 percent of the WPA personnel in April 1941 were in this age range, which includes only 37 percent of the total labor force. Little difference between the two distributions

<sup>A</sup> Covers certified and noncertified WPA workers employed in November 1937.

<sup>B</sup> Covers certified WPA workers employed in February 1939 whose certifications were continued in the review of need conducted at that time.

<sup>C</sup> Covers certified WPA workers employed on April 30, 1941.

exists in the age groups from 25 to 39 years. Young workers from 18 to 24 years of age, however, represented twice as large a proportion of the total labor force as of the WPA workers. Relatively few WPA workers were in the age group 65 and over. Many persons in this age group receive benefits under the social security program for old-age assistance.

Negro workers, who represented approximately 16 percent of the WPA total on April 30, 1941, were in general somewhat younger than the white workers employed on the program. Their median age was 41 years, as compared with 43 years for white workers. Negro women on WPA rolls, whose median age was 38 years, were younger than Negro men, for whom the median age was 42 years. The difference between the median ages of white men and women was only about five months (43.3 and 42.9 years, respectively).

Considerable variation existed among the states in the average age of WPA workers on April 30, 1941. In eight southern states the median age of WPA workers was 40 years or less, and in 13 other states it was over 45 years, as compared with 43 years for workers in the continental United States as a whole.

WPA workers in large cities were somewhat older than those in the rest of the country. In urban areas having a population of 100,000 or more the average age of WPA workers was approximately 44 years, whereas workers in the remainder of the country averaged 42 years. The men employed in major urban areas were

CHART 6  
PERCENTAGE DISTRIBUTION OF WPA WORKERS  
BY AGE GROUPS

two and one-half years older than WPA men elsewhere (44.5 as compared with 42.0), but the women in the large cities were two and one-half years younger than the women in other sections of the country (40.5 as compared with 43.1 years of age).

The median age of project workers was only half a year higher in April 1941 than in November 1937 when total WPA employment was at approximately the same low level.<sup>4</sup> The median age for men was about 43 years in both periods, but the median age for women workers was about two years higher in 1941 than in 1937.

Comparison of the age distribution of WPA workers in April 1941 with that in February 1939, on the other hand, reveals considerable difference. The median age of workers in April 1941 was almost three and a half years higher than in February 1939, nearly 42.8 as compared with 39.4 years. Relatively fewer workers were in the age groups under 40 years in April 1941 than in February 1939, and more were in the higher age groups. The difference between the two years is attributable largely to the character of the employment changes that occurred between 1937 and 1941. Between 1937 and 1939 a marked expansion of WPA employment occurred, in the course of which large numbers of workers considerably younger than the typical worker in 1937 were added to the WPA rolls. When private employment expanded and WPA employment was reduced

TABLE 19. PERCENTAGE DISTRIBUTION OF THE LABOR FORCE IN THE UNITED STATES, BY AGE GROUP<sup>A</sup>

MARCH 24-30, 1940

| Age group (years)  | Total | Men   | Women |
|--------------------|-------|-------|-------|
| Total              | 100.0 | 100.0 | 100.0 |
| 14-17              | 2.5   | 2.3   | 2.9   |
| 18-19              | 5.0   | 4.1   | 7.8   |
| 20-24              | 14.5  | 12.5  | 20.9  |

| 55-59              | 5.9   | 6.6   | 3.9   |
| 60-64              | 4.2   | 4.7   | 2.6   |
| 65 and over        | 4.0   | 4.6   | 2.0   |
| Median age (years) | 36.0  | 37.6  | 31.2  |

<sup>A</sup> Based on preliminary data from 1940 Census of Population (Release P-1, No. 8). Includes persons 14 years of age and over who were employed or seeking employment during the week of March 24-30, 1940.

<sup>4</sup> The survey in November 1937 covered all WPA workers, noncertified as well as certified.

between 1939 and 1944, these younger workers were able to obtain jobs in private industry more readily than their elders.

During the period from 1939 to 1941 the median age for the men employed on WPA projects increased by three and a half years as compared with an increase of only about a year

and a half for women workers. The actual number of men decreased 51 percent, but the number of women decreased only 29 percent. This difference reflects the more numerous employment opportunities that exist for men than for women in the currently expanding defense industries.

# FINANCIAL SUMMARY

**W**ORK Projects Administration activities are financed primarily from Federal funds appropriated by Congress, but a large share of the cost is met by the state and local agencies that propose and sponsor WPA projects. Nearly all the sponsors' funds are used for materials, equipment, and other nonlabor items of project cost. WPA (Federal) funds, on the other hand, are used chiefly to pay the wages of project workers; the amount of WPA funds available, therefore, limits the number of workers that can be employed under the program. The total Federal appropriation for the WPA program in the fiscal year ending June 30, 1941, was the smallest amount made available for this purpose except in the fiscal year 1936 when the program was inaugurated. Sponsors' contributions, however, were larger than in any previous year.

## Appropriations

Of the gross amount made available to the WPA for the year, \$975,650,000 was appropriated by the ERA Act, fiscal year 1941, and \$375,000,000 was added by a supplemental appropriation (Public Law No. 9, 77th Congress, also referred to as the Urgent Deficiency Appropriation Act, 1941) approved on March 1, 1941. In addition to the \$1,350,650,000 in new appropriations, \$30,540,000 in unobligated balances remaining from previous ERA acts was reappropriated, making a gross total of \$1,381,190,000 available for the fiscal year 1941.

Deductions were made from this fund for various purposes. The amount of \$225,000 was transferred to the Procurement Division

of the Treasury Department for the work relief supply fund; \$13,440 was transferred to the Post Office Department for expenses of the United States Official Mail and Messenger Service; and \$1,250 was transferred to the Office of Administrator, Federal Works Agency, for administrative expenses. After these deductions had been made, a net total of \$1,380,950,000 was left available to the WPA for the year's operations.

| Net funds available to WPA                                            | 1,380,950,270 |

Includes \$8,864,559 of 1938 and 1939 act funds which continued to be available for obligation on Federal construction projects through provisions of the fiscal year 1941 act, of this amount, \$7,288,887 was available for projects operated by WPA and \$1,575,672 for WPA projects operated by other Federal agencies.

Source: Based on reports of the U. S. Treasury Department.

## Allocations of WPA Funds

Most of the funds made available to the WPA were allocated for projects that it operated directly. The sum of \$1,289,777,000, or 93 percent of the total, was allocated for this purpose. About 3 percent, or \$43,702,000, was

allocated by the WPA to other Federal agencies for the operation of WPA projects and for administrative expenses incurred by these agencies in connection with such projects. In addition to the project allocations, allotments amounting to \$44,468,000 were made for the administrative expenses of the WPA, \$29,500 was set aside for the settlement of property damage claims, and \$2,974,000 remained undistributed as of June 30, 1941.

Of the \$43,702,000 allocated to other Federal agencies during the fiscal year, \$42,126,000 was

made available from the new appropriations and the remainder (\$1,576,000) represented unobligated balances of funds set aside under previous acts for the completion of Federal construction projects. The \$42,126,000 in newly appropriated funds was distributed among 24 bureaus, offices, and independent establishments. More than half this amount, however, went to the War and Navy Departments. The Bureau of Yards and Docks of the Navy Department received \$11,371,000 for additions and improvements at its shipyards, fleet and air bases, and other stations along the Atlantic, Gulf, and Pacific Coasts. For similar work at army forts, camps, supply depots, and other posts, \$10,891,000 was allocated to the Quartermaster Corps of the War Department. Of the \$19,864,000 allocated to the other 22 agencies, \$11,203,000 was distributed among several bureaus of the Department of Agriculture, including the Bureau of Entomology and Plant Quarantine (\$4,739,000), the Forest Service (\$4,354,000), and the Soil Conservation Service (\$1,111,000). Other agencies that received allocations of more than \$1,000,000 were the National Park Service and the Bureau of Labor Statistics. The complete list of agencies, together with the amounts allocated to each under the ERA Act, fiscal year 1941, is given in Table 21. Table VII of the appendix shows by agencies the amounts of WPA funds allocated, obligated, and expended under the ERA Act, fiscal year 1941, and under all ERA acts.

## Expenditures of WPA Funds

Expenditures of WPA funds for all purposes during the year ending June 30, 1941, amounted to \$1,326,111,000. Programs operated by the WPA accounted for \$1,284,781,000 of the total, and the remainder, \$41,330,000, was expended for programs operated by other Federal agencies. WPA expenditures for its own programs were 12 percent less than in the preceding year. About 96 percent, or \$1,239,178,000 of the expenditures made by the WPA in the fiscal year 1941, was used for work projects and \$45,575,000 for administration. A small portion, \$27,000, was paid out in settlement of property damage claims.

<sup>A</sup> Includes NYA administrative expenses incurred prior to July, 1939 but does not include funds for other NYA activities or WPA funds transferred under the ERA Acts of 1935 and 1936 for land utilization and rural rehabilitation programs administered by the Farm Security Administration.

<sup>B</sup> Includes work projects and administrative expenditures of WPA funds allocated under section 3 of the ERA Act of 1938, section 11 of the ERA Act of 1939, and section 10 of the ERA Act, fiscal year 1941.

<sup>C</sup> Includes a total of \$15,901,935 expended on miscellaneous activities, including purchases of surplus clothing, aid to self-help and cooperative associations, tornado relief, and settlement of property damage claims. The distribution of this total by fiscal year is as follows: 1939—\$15,827,320; 1940—\$47,332; 1941—\$27,283.

Source: Based on reports of the U. S. Treasury Department.

The expenditure of \$41,330,000 of WPA funds by other Federal agencies during the fiscal year 1941 represented a decline of 29 percent from the preceding year and of 44 percent from the fiscal year 1939, the first year in which such expenditures were made. Of the funds allocated to these other agencies in the fiscal year 1941, 3.8 percent was used for administrative purposes and the remainder was spent for project operations.

The chief purposes for which WPA funds were spent during the year are indicated in Table 23, which presents data separately for the programs operated by WPA and by other Federal agencies. All expenditures for projects, administration, and other purposes are included.

### Fluctuations in Expenditures

The amount of WPA funds expended in the fiscal year 1941 was the smallest annual expenditure in the six years of WPA operations, except for the fiscal year 1936, when the program was initiated and developed. Total WPA expenditures (including those of other Federal agencies) in the fiscal year 1941 were 13 percent less than in 1940 and 41 percent less than the amount expended in the 1939 fiscal year, the peak of WPA employment.

Trends in WPA expenditures have been similar to those in WPA employment, which are analyzed in an earlier section of this report (p. 37). Both expenditures and employment

CHART 7  
WPA EXPENDITURES\*

\* Includes WPA funds allocated to other Federal agencies from July 1938 to date.

WPA 4021

rose rapidly during the last six months of 1935, when the program was getting under way. Both followed a downward course from the spring of 1936 until the latter part of 1937, when WPA operations were again expanded to relieve the acute unemployment resulting from the 1937 business recession. Since the last quarter of 1938 the trends have been downward. (See Tables 24 and 25.)

Month-to-month fluctuations in WPA expenditure figures, however, have tended to be more pronounced than those in WPA employment. To some extent this variation has resulted from differences in the number of proj-

ect pay roll periods ending within a month and other technical factors associated with pay roll, accounting, and purchasing procedures. Moreover, the expenditure figures do not respond to changes in the level of program activity as rapidly as the employment figures. A sharp rise in employment during a given month is not fully reflected in the expenditure data for that month because of the lapse of time between the assignment of a worker to a project and the receipt of his first pay check. Average figures, therefore, such as the three-month moving average shown in Chart 7,

provide a more satisfactory measure of changes in WPA expenditures than do monthly totals, because they minimize the effect of these technical factors.

### Administrative Expenditures

During the fiscal year 1941, the WPA spent \$45,575,000 for administration, including the liquidation of obligations incurred during the preceding year. This amount, which represented 3.6 percent of total WPA expenditures for the year, was the smallest annual expenditure for administrative purposes in the six

| December  | 134,296   | 177,793     | 107,085     | 214,794     | 133,301     | 114,284     |           |

<sup>A</sup> For programs included, see footnotes to Table 22.

Source: Based on reports of the U. S. Treasury Department.

years of program operation. It was 14 percent lower than the previous year's total and 38 percent less than the amount expended in the fiscal year 1939.

The ERA act for the fiscal year 1941 (as amended by Public Law No. 9, 77th Congress), placed a limitation of \$44,500,000 on the amount of obligations that might be incurred for administrative expenses, and stipulated that of this amount a maximum of \$37,100,000 might be used for personal services (salaries), \$3,600,000 for travel, \$600,000 for communications, and \$320,000 for printing and binding, leaving a balance of \$2,880,000 available for all other items.

The 1941 administrative expenditures shown in Table 26 include checks issued during the year in liquidation of obligations incurred in the previous year, as well as checks issued in liquidation of obligations incurred during fiscal year 1941 in accordance with the 1941 act. The total expenditures in terms of checks issued during the fiscal year 1941 are, therefore, slightly larger than the amount of obligations incurred during the year, which did not exceed the limitations specified in the act.

Most of the reduction in administrative expenditures between the fiscal years 1940 and 1941 was brought about by a reduction in administrative personnel. During the fiscal

WPA 4023

year 1941, administrative employment averaged 21,000 persons as compared with 29,500 in 1940 and 36,000 in 1939. By June 30, 1941, the number had been reduced to 18,900 employees. About 17,200 of these employees, or more than 90 percent of the total, were in state and local offices, less than 1,400 were in the central office in Washington, and approximately 300 were regional office and other field employees.

OPERATED BY WPA, BY FISCAL YEAR  
AND BY SOURCE OF FUNDS

each state. The second control is the limitation of WPA project expenditures for nonlabor purposes to an average of \$6 per month per worker in any state. Currently, however, projects that have been certified by the Secretary of War or the Secretary of the Navy as important to the national defense may be exempted from these provisions, and the WPA was specifically authorized to spend up to \$50,000,000 of its funds during the fiscal year 1941 for nonlabor costs in excess of the usual limitation when necessary for the operation of certified defense projects.

Salary payments to administrative personnel represented 83 percent of the total administrative costs of the WPA during the fiscal year 1941. Travel expenses of administrative employees accounted for 7 percent of the total, the purchase of materials, supplies, and equipment for about 3 percent, and the rent of buildings and equipment for another 3 percent. The amounts paid out for these and all other items of administrative cost are shown in Table 26.

### Sponsors' Funds

From its beginning, the WPA program has been a joint responsibility of the Federal Government and of state and local governments throughout the country. The state and local agencies (and in a few cases, other Federal agencies) propose the projects, cooperate with the WPA in their supervision, and contribute a substantial share of their cost. Expenditures made by sponsors during the fiscal year 1941 amounted to \$547,867,000, or 31 percent of total project expenditures. This amount represented an increase of 11 percent over the previous year's expenditures.

The share of the cost of projects borne by sponsors is subject to two general statutory controls. The first is the provision requiring sponsors to meet an average of at least 25 percent of the total cost of all non-Federal projects approved after January 1, 1940, in

Sponsors' funds, for the most part, are supplied by highway and street commissions; water, sewer, and park departments; boards of education, health, and welfare; and similar agencies of municipalities, counties, townships, and states. Comparatively small amounts are supplied by the Federal agencies that sponsor projects operated by the WPA.

### WPA and Sponsors' Expenditures on Projects Operated by the WPA

Combined WPA and sponsors' expenditures on projects operated by the WPA during the year ending June 30, 1941, amounted to \$1,787,045,000. The WPA supplied \$1,239,178,000 and sponsors \$547,867,000 of this

amount. The 1941 total represents a reduction of 6 percent below the previous year's expenditures and of 30 percent under the total for the fiscal year 1939.

### Objects of Expenditure

The chief purposes for which WPA and sponsors' expenditures are made differ basically. WPA project funds are used to pay the wages of certified relief workers and of some of the supervisory personnel; they are also used to pay a limited portion of the nonlabor costs. Sponsors' funds, on the other hand, are used to pay the bulk of the nonlabor costs of projects and the salaries of some of the supervisory personnel, engineers, operators of heavy equipment, and other key personnel not available among persons certified for WPA employment. This division of the project costs insures the maximum amount of employment from the expenditure of WPA funds. Furthermore, it leaves the initiation of projects with high nonlabor costs dependent largely upon the willingness and ability of the project sponsors to provide the additional funds necessary for these nonlabor purposes (except, of course, in the case of certified defense projects).

Wages of project workers accounted for about 90 percent of the total project expenditures from WPA funds during the fiscal year 1941; 7 percent was used for the purchase of materials, supplies, and equipment; 2 percent was spent for the rent of equipment; and the balance of 1 percent was absorbed by other nonlabor costs. In contrast with this distribution, only 17 percent of the sponsors' funds was spent for labor, but 44 percent went into the purchase of mate-

rials, supplies, and equipment; some 27 percent was used for rent of equipment; and 12 percent for other nonlabor costs. (See Table 28.) Of the total labor cost, about 92 percent was paid from WPA funds and 8 percent from sponsors' funds. On the other hand, only 21 percent of the nonlabor cost was met by the WPA and 79 percent was paid by project sponsors. WPA and sponsors' expenditures for nonlabor purposes are shown by type in Table X of the appendix.

Despite the extra expenditures of WPA funds for nonlabor costs of certified national defense projects, the proportion of total WPA funds spent for labor was only slightly less in the fiscal year 1941 than in the previous year (90.4 percent in 1941 as compared with 91.5 percent in the year ending with June 1940). It has been possible to maintain this high ratio of wage payments because sponsors have increased their expenditures for nonlabor purposes. Sponsors paid 79.3 percent of the nonlabor costs of all projects during the fiscal year 1941, as compared with 77.7 percent in 1940.

### Types of Projects

The relative amounts of expenditures for the various types of projects were approximately the same in the fiscal year 1941 as in the earlier years of the WPA program, although the emphasis placed on some kinds of work was modified to meet the requirements of the national defense program. Somewhat smaller proportions of the total funds in 1941 than in the preceding fiscal year were spent for road and street, conservation, sanitation, and recreational facility projects. Increases in the proportionate

CHART 10

**WPA AND SPONSORS' EXPENDITURES ON PROJECTS  
OPERATED BY WPA, BY TYPE OF PROJECT**

Year Ending June 30, 1941

share of expenditures were reported for projects representing work on airports and airways, public buildings, and public utilities, and for community service programs. Approximately three-fourths of the project expenditures were made for construction work and the remainder were made for various kinds of nonconstruction projects. These included a new activity undertaken by the WPA during 1941—the training of workers for occupations needed in defense industries, which is described in a special section of this report.

As in previous years, projects for work on highways, roads, and streets continued to predominate, although they declined somewhat in importance. Road work accounted for nearly 39 percent of the \$1,787,045,000 in WPA and sponsors' funds that was spent for project operations during the 1941 fiscal year. Two other kinds of work represented approximately equal shares (11 percent) of the total expenditures. These were projects for the construction and improvement of sewer and water systems and other public utilities, which cost \$194,877,000, and public buildings projects, on which \$188,779,000 was expended. Work on parks and other recreational facilities accounted for about 5 percent of the total. Airport and airway projects, costing \$69,777,000, were only slightly less important in terms of expenditures; airport work, however, accounted for about twice as large a share of the expenditures as it

had in the preceding year. Conservation and sanitation work were responsible for 3 and 1 percent, respectively, of the total project costs.

Among the various community service projects that comprise the bulk of WPA nonconstruction activities, welfare projects accounted for the largest expenditures. For this group, which includes sewing, school lunch, and housekeeping aide projects and those for the distribution of surplus commodities, 12 percent of the total project funds was expended. The public activities group, consisting of education, recreation, library, museum, and arts projects, utilized 8 percent of the expenditures. Four percent of the total was spent for research and records projects, which make up the third major community service group.

WPA defense work accounted for a considerable part of both construction and nonconstruction project activities. Expenditures for this work amounted to \$434,959,000 in WPA and sponsors' funds, or about a fourth of the total payments for projects operated by the WPA during the fiscal year. This amount includes expenditures for noncertified defense projects as well as for projects certified by the Secretary of War or the Secretary of the Navy as being of such importance for military or naval purposes that they may be operated under benefit of the exemptions provided in the ERA Act, fiscal year 1941.

Sponsors' expenditures, which represented 31 percent of total expenditures for all projects, were relatively largest on the kinds of projects that require considerable quantities of materials and equipment, since the greater part of the sponsors' contributions are made in this form. Sponsors' expenditures for work on highways, roads, and streets, and for public buildings projects approximated 34 percent of total costs for these types. From 31 to 33 percent of the cost of four other types of construction projects—recreational facilities, public utilities, conservation, and sanitation was met by the sponsors. The community service programs, for which nonlabor expenditures were relatively small, received sponsors' contributions that averaged 23 percent of the total cost during the year.

Sponsors contributed a larger share in the fiscal year 1941 than in the previous year for

every major type of project, except airport and airway projects. The decline in the sponsors' share for these projects was chiefly attributable to the fact that most of the work done at airports was considered of great importance for national defense and therefore Federal funds were, in many instances, used for nonlabor costs above the usual limitation.

The kinds of work carried on under the WPA program in the states have been determined primarily by the needs in the various communities for both defense and nondefense facilities and services, the financial abilities of the state and local governments, and the types of skills possessed by the persons available for WPA jobs. Highway, road, and street projects are well adapted to most state WPA programs. In all but five states, expenditures on road

projects exceeded those on any other type during the year ending June 30, 1941, and in eight states these projects accounted for half or more of the total expenditures. Work on certain other types of projects, such as public buildings and public utilities, represents about the same proportion of total expenditures in most states as in the country as a whole. The relative amounts spent for other types of projects, such as airport work, conservation projects, and some of the community service activities, have varied considerably within the United States in response to local social and economic conditions, which during 1941 were greatly affected by defense activities. The amounts expended in each state and their percentage distribution are shown by major types of projects in Tables XV and XVI of the appendix.

# PROJECT ACTIVITIES

**T**HE primary purpose of the WPA program has always been to furnish useful employment to unemployed workers in local communities. Through the operation of projects to attain this end, public resources that otherwise might have been used to support a considerable part of the population in idleness have been directed toward the construction or improvement of the physical assets of communities in all parts of the country and toward the performance of useful public services. A great deal of the work has been devoted to the improvement of physical facilities for transportation and communication, recreation, education, conservation, and public health and sanitation, and of facilities used in the performance of other normal governmental functions. Substantial contributions have also been made through nonconstruction activities such as recreational leadership, educational services, provision of school lunches and other welfare work, the prosecution of research and records surveys, and many other activities.

Much of the work undertaken through WPA projects has been a direct contribution to the defenses of the Nation. This has been particularly true during the 1941 fiscal year, but it applies also to the earlier years of program operation. Airports that have been built or improved during the past six years form an important part of the Nation's aerial defenses. Improvements made by WPA workers have helped to preserve the usefulness of many military and naval posts that were becoming obsolete. These kinds of work were expanded

during 1941 and, in addition, new defense activities were undertaken such as the construction of access roads to military and industrial centers and the training of manual workers for occupations needed in defense industries.

The accomplishments in many of these fields are not readily measurable. For this reason, the record of achievement presented in this chapter, extensive though it is, should be considered an indication rather than a complete summary of the contribution that has been made by the WPA program.

## Transportation and Communication

Construction and improvement of the facilities for transportation and communication that are essential both to the successful development of the national defense and to the normal conduct of everyday affairs have always constituted the major activity under the WPA program. The greater part of the improvements and additions to the airport network in this country since 1935 have been made through WPA projects. WPA road work has done much toward making highways and roads in all sections of the country adequate to meet the requirements of modern motor transportation. These include not only the needs of farmers and others in rural areas but also military and industrial requirements for access roads and strategic traffic routes. Work to improve water transportation facilities has been much less extensive, but has been important in the areas where it has been undertaken.

Highway, road, and street projects are well adapted to prosecution under the WPA program. The number of persons employed on them can be readily increased or decreased, according to the number of eligible unemployed workers available, without disrupting the continuity of work. Sections of roads may be fully completed so that they are usable in the event that large numbers of workers leave for harvest work or other private employment. Furthermore, projects of this type can utilize large numbers of the unskilled and semiskilled laborers who constitute a large proportion of the total eligible workers.

As a result of the emphasis placed on this kind of work, the accomplishments on highway, road, and street projects since the establishment of the WPA program in July 1935 have been extensive. In the six years ending with June 1941, a total of some 600,000 miles of road construction or improvement was completed. During the last year of this period, WPA highway, road, and street construction or improvement averaged about 230 miles for each day of the year.

By far the greatest part of the WPA road work has been in rural areas. Of the mileage completed in the six-year period, about 530,000 represented the construction or improvement of rural roads as compared with 61,000 miles of urban streets. In addition, about 10,000 miles of roads in parks and other reservations were completed by WPA workers. These mileage

totals include the access roads, strategic highways, and other road work important for defense purposes that are discussed briefly on page 25 of this report.

Important differences exist between the kinds of road work required in urban and in rural areas. Much of the work in urban areas involves the widening of streets, replacement of old pavement by new and often high-type surfacing, and the relocation of sidewalks, curbs, gutters, and other street appurtenances. In rural areas, on the other hand, the necessary improvements constitute a simpler kind of construction. Rural roads can often be widened without rebuilding the entire roadbed and high-type surfaces are not essential to carry the anticipated traffic loads. These differences are reflected in the fact that only about 9 percent of the roads built or improved through WPA projects in rural areas have had high-type surfacing as compared with 43 percent of the streets on which work has been done in urban

Farm-to-market roads built by WPA workers; the one above is near Meridian (Miss.) and that at the left is near Falmouth (Mass.)

centers. Nevertheless, the improvements made on farm-to-market and other rural roads, giving farmers access to markets, schools, and churches and permitting regular mail deliveries in all weathers, undoubtedly represent at least as great a benefit to rural families as do the street construction jobs to urban residents.

Illustrative of the work in urban centers is the Kilbourn Avenue widening project in Milwaukee, Wisconsin. This street is being developed to handle heavy east-west traffic, thus keeping cross-town traffic off the principal business street of the city. The undertaking is a unit of a comprehensive plan, devised jointly by the city and county, to develop major traffic arteries. Ten city blocks have been improved through the use of WPA labor on several projects sponsored by the city. The work included the demolition of more than 60 structures; removal and replacement of sidewalks, driveways, curbs, and gutters; widening and paving of street surfaces to provide two 40-foot traffic lanes separated by a landscaped center plot varying from 20 to 230 feet in width; and such appurtenant work as laying sewer lines and providing street lighting,

| Other roads .....        | 9,658   | 2,230             | 7,428                           |

traffic controls, and fire and police alarm systems.

Another and more unusual kind of construction project undertaken in an urban center was the extension of 4,650 feet of subway for street-car operation in Boston, Massachusetts. This work, completed in December 1940, was carried on in one of the most thickly populated and congested sections of the city. Temporary walks and other safeguards for pedestrian traffic were built, adjacent buildings were underpinned, and the project was operated at times when the noise would cause the least interference with business in the vicinity. The excavation was made through soft material with a ground water level from four to twelve feet below the surface. These conditions, together with the presence of obstructions, such as old pilings, wharves, and abandoned sewers, presented difficult construction problems. Nevertheless, under the expert supervision of the engineering staff of the city's transit commission, the job was completed by relatively unskilled men

Kilbourn Avenue in Milwaukee before and after widening

at a cost that compared favorably with similar jobs on other sections of the subway line. More than a fourth of the total project cost was paid by the sponsor.

In connection with the WPA work on highways, roads, and streets, large numbers of bridges and culverts have been built and extensive improvements in the form of sidewalks, curbs, and gutters have been completed. During the six years ending with June 1941, about 73,000 new bridges and viaducts were built by WPA workers and some 44,000 others were reconstructed. Of the new bridges, about 20,000 were of steel or masonry, but the great majority (53,000) were of wood. The wooden and masonry bridges averaged about 30 feet in length, but the steel bridges were considerably longer (50 feet, on the average). The new culverts completed through WPA projects numbered approximately a million for the entire six-year period. During the 1941 fiscal year alone, 218,000 new culverts were installed, an average of about 600 per day.

The bridges and viaducts, like the highways of which they are a part, vary with the need they are intended to satisfy. Some of them are important steel spans of considerable length. Many of them are small, sturdy bridges replacing weak structures that were unsafe for modern truck traffic. Some eliminate the necessity of fording streams that became impassable in rainy weather. Others replace old bridges that were too narrow to accommodate even two lanes of traffic. A new 40-foot reinforced concrete girder span built across the Pensaukee River in Oconto County, Wisconsin, permitted the relocation of a road that had been closed to traffic practically every spring because of high water and washouts. The new road is four feet higher and considerably shorter than the old one and passable in all seasons.

Much work has also been done to increase the safety of roads and to improve their appearance. More than 153,000 miles of roadside drainage have been completed to reduce the hazards of flooded roadways; 4,000 miles of guardrails and guardwalls have been built or improved; 27,000 new light standards have been installed and 66,000 others have been reconditioned; and 824,000 traffic signs have been erected. In addition, nearly 44,000 miles of roadway have

Masonry bridge built under the farm-to-market road program in Kentucky to replace the old covered bridge at the right

been improved by clearing and planting shrubs and trees, sodding and seeding of road shoulders and parkways, and other roadside beautification work. Some 25,000 miles of curbs and 5,900 miles of gutters have been constructed or improved. For the benefit of pedestrians, 18,000 miles of new paved sidewalks and paths have been completed and 7,000 miles of both types have been reconstructed or improved.

Some of the WPA nonconstruction work has also been directed toward the improvement of transportation facilities. Surveys of traffic made by WPA workers in cooperation with local community officials have led to changes in traffic routing and in selecting the streets on which improvements were most needed. As a result, projects subsequently selected for operation have helped to reduce accidents and to improve traffic conditions.

WPA work in the field of air transportation has been directed toward making ground facilities adequate for the use of the fast aircraft

TABLE 31. BRIDGES, CULVERTS, AND OTHER ROAD APPURTENANCES CONSTRUCTED OR IMPROVED ON PROJECTS OPERATED BY WPA

| Sidewalks and paths              | Miles               | 27,808    | 21,049           | 6,759                         |  |
| Curbs                            | Miles               | 25,226    | 21,886           | 3,340                         |  |
| Gutters                          | Miles               | 5,895     | 5,122            | 773                           |  |
| Guardrails and guardwalls        | Miles               | 4,159     | 2,806            | 1,353                         |  |
| Culverts                         | Number              | 1,112,540 | 997,983          | 114,557                       |  |
| Bridges and viaducts             | Number              | 116,563   | 72,699           | 43,864                        |  |
| Wood                             | Number              | 76,918    | 52,462           | 24,456                        |  |
| Steel                            | Number              | 21,158    | 6,036            | 15,122                        |  |
| Masonry                          | Number              | 18,487    | 14,201           | 4,286                         |  |

that have been developed in recent years. The accomplishments include the development of some 220 new landing fields and the enlargement or improvement of about twice that number, as well as the new construction or improvement of 3,400,000 feet of runways and of many taxi strips, turning circles, and other airport facilities. Since practically all airport work is now considered important to the national defense, these accomplishments are described in some detail in the section on defense work (pages 24 and 25).

Improvements to water transportation facilities that have been completed through the operation of WPA projects have consisted for the most part of the construction or reconstruction of docks, wharves, piers, and jetties and breakwaters. Artificial channels and canals have also been built or improved.

Communication services have been extended by the stringing of 3,500 miles of publicly owned telephone and telegraph lines and the improvement of about 2,200 miles of existing lines. These lines have facilitated communication for fire prevention work in forests and have improved intercommunication at army bases and other Federal establishments. WPA workers have also constructed or improved police, fire alarm, and traffic signal lines which in total length would reach from New York to San Francisco.

## Education

Local communities have recognized the advantages to be derived from WPA work in the field of education and have sponsored many projects both to improve their school plants and to extend educational services to groups not ordinarily reached by the public school systems. The need for improvement or extension of school facilities varies widely, of course, from one community to another, and this variation is reflected in the kinds of work done by the WPA in this field. Many WPA projects have been undertaken to improve or recondition school buildings that had fallen into disrepair during the depression years and that, in many instances, had been condemned by public officials. The types of work have ranged from the replacement of roofs to com-

plete renovation to provide modern lighting, heating, and plumbing facilities for the school children. Through the WPA program more than 30,000 school buildings ranging from small rural schools to large city institutions were improved during the period from the beginning of the program through June 1941.

About 5,000 new school buildings were completed by WPA workers during the same six-year period. Many of them provide a modern educational plant to replace an inadequate old establishment. Sometimes the new buildings were designed to effect the consolidation of several schools, permitting the old buildings to be converted into branch libraries or to be used for other educational purposes.

TABLE 32.—NUMBER OF SCHOOL BUILDINGS CONSTRUCTED ON PROJECTS OPERATED BY WPA, BY PUPIL CAPACITY

| CUMULATIVE THROUGH JUNE 30, 1941 |                  |         |           |         |
|----------------------------------|------------------|---------|-----------|---------|
| Pupil capacity                   | New construction |         | Additions |         |
|                                  | Number           | Percent | Number    | Percent |
| Total .....                      | 5,103            | 100.0   | 1,908     | 100.0   |
| Less than 50 .....               | 1,289            | 25.3    | 540       | 28.3    |
| 50-149 .....                     | 1,978            | 38.8    | 819       | 43.1    |
| 150-249 .....                    | 811              | 15.8    | 289       | 15.1    |
| 250-349 .....                    | 444              | 8.7     | 121       | 6.3     |
| 350-449 .....                    | 252              | 4.9     | 62        | 3.2     |
| 450-549 .....                    | 184              | 3.6     | 31        | 1.6     |
| 550-649 .....                    | 74               | 1.5     | 14        | 0.7     |
| 650-749 .....                    | 27               | 0.5     | 13        | 0.7     |
| 750-849 .....                    | 19               | 0.4     | 10        | 0.5     |
| 850 and over .....               | 25               | 0.5     | 9         | 0.5     |

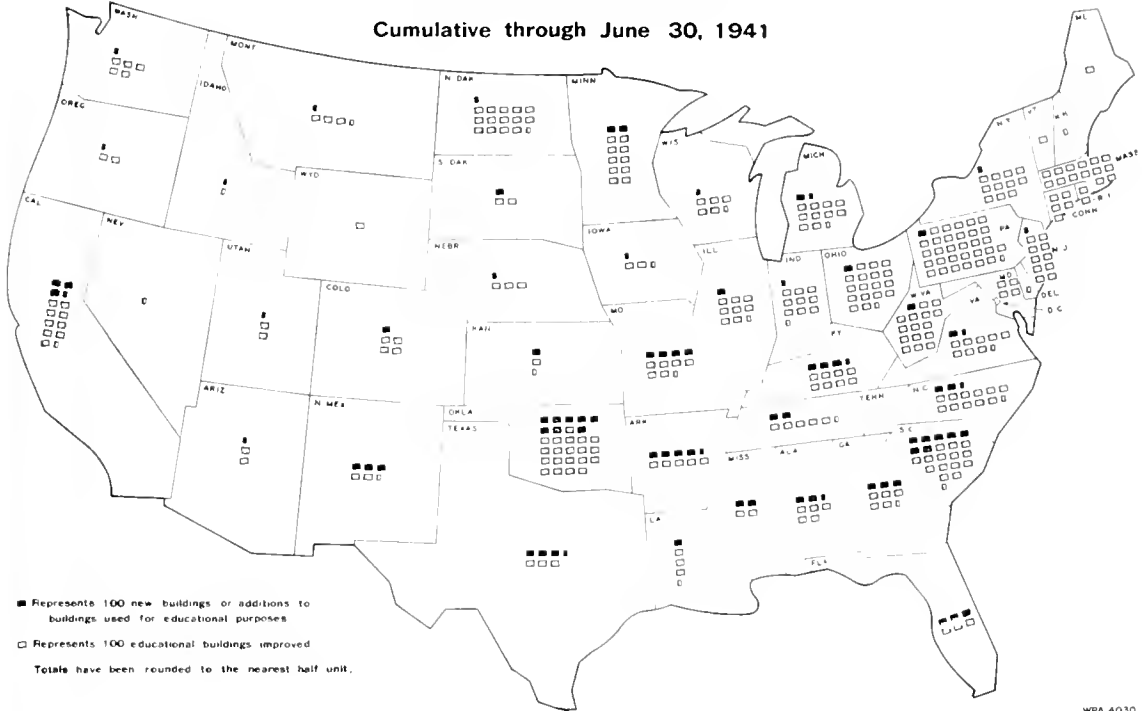

The new schools that project sponsors have chosen to build with WPA assistance ranged from small buildings for rural areas to large city institutions with accommodations for many hundreds of pupils. Nearly two-fifths of them were buildings with a capacity of between 50 and 150 pupils, as is indicated in Table 32. Although small schoolhouses with perhaps no more than one or two rooms continue to fill the needs in some sparsely settled areas or sections where transportation is difficult, these small schools with room for less than 50 pupils made up only 25 percent of the WPA-built total. Nearly 16 percent of the schools had facilities for between 150 and 250 pupils, and a slightly larger proportion could accommodate between 250 and 550 children. The remaining 3 percent of the school buildings were large structures, 25 of which had room for more than 850 pupils.

## CHART 11

### EDUCATIONAL BUILDINGS CONSTRUCTED OR IMPROVED BY WPA

Cumulative through June 30, 1941

One of the new grade school buildings with facilities for approximately 100 pupils was recently completed in Shawnee County, near Topeka, Kansas. The destruction of the district school by fire in the spring of 1939 had created an urgent need for school facilities in that district where temporary school quarters were being provided in an old railway coach. Through cooperation with the WPA, a new school was built at a cost of \$37,000 of which the sponsor provided about a third. Constructed of brick, with an asphalt roof and stone trim, the new school contains four classrooms, offices, and an auditorium with a stage on the main floor and has boiler, pump, and coal rooms in the basement.

Among the buildings that are partly educational and partly recreational in function is the new student-activities building constructed by WPA workers for the State Teachers' College at Tempe, Arizona, where the continually increasing enrollment had created a need for expanded

student facilities. The central part of the building is an auditorium, an unusual feature of which is a two-way stage constructed so that its audience may be seated either in the auditorium or on the lawn outside. Classrooms, office rooms, locker rooms, and showers are provided in the wings on either side of the auditorium. For the walls of the building, WPA workmen made bricks out of the earth which was excavated to form the basement, using as an admixture a bitulithic oil or emulsifier instead of the water and straw customarily used in the manufacture of adobe in Arizona. The foundation is of reinforced concrete and the roof is covered with asbestos roofing. Murals for the decoration of the auditorium and hand-woven textiles for window draperies and upholstery were provided through a WPA art project.

Educational facilities have also been improved through projects for the construction of additions to existing buildings. A small rural

New grade school building in Shawnee County (Kans.) replaces an older building destroyed by fire

community in Bulloch County, Georgia, which had reached its limit of permissible bonded indebtedness, was in great need of additional classroom space and facilities, because of the growth of the school population. With WPA providing the labor and the county as sponsor providing money and materials to the extent of about 40 percent of the total cost, an addition was made to the Nevils High School. The new structure is a five-room frame building, containing a canning plant, a farm and industrial arts shop, an agricultural classroom, and two home economics classrooms.

Since the beginning of the program, more than 1,900 additions to schools have been constructed through WPA projects. More than two-fifths of these additions have a capacity of between 50 and 150 pupils, as is indicated in Table 32.

WPA contributions in the field of education have included the provision of many educational

opportunities for persons beyond school age and for children of preschool age from low-income families. These educational activities have been conducted on a state-wide basis in close cooperation with state departments of education, to make sure that they supplement rather than take the place of any activities conducted by existing state bureaus. In addition to expanding the educational opportunities available to the public, these WPA projects have facilitated the placement of unemployed teachers in regular jobs under the state school systems.

Work to eliminate illiteracy and to facilitate the naturalization of aliens has occupied an important place in the educational program. WPA literacy classes have been conducted for the benefit of the many Americans who have grown to maturity without learning to read and write and of the large numbers of aliens who must learn to read and write English before they can begin to take steps toward becoming citizens of the United States. To assist foreign-born persons in taking further steps toward naturalization, additional classes are included under the educational program. In these classes prospective citizens study the history of the United States, the principles of democratic government, the responsibilities of citizenship, and other subject matter required for naturalization.

Because literacy and naturalization work are so closely related, many states have conducted these classes as one program; therefore data for the country as a whole are available only for the two activities combined. During the month of April 1941, about 211,000 persons were enrolled in literacy and naturalization classes provided under the WPA program.

Although large numbers of persons have been assisted in obtaining their citizenship through WPA classes during the past six years, a large field for the expansion of such work remains. Results of the alien registration in December 1940 indicated that there were more than 4,500,000 aliens residing in the United States, a considerable number of whom are probably unable to read and write English. In a number of states the alien population represented more than 5 percent of the state total in 1940. It is important, especially in the present emergency, that as many persons as are able to accept the responsibilities of citizenship should

Interior of Student Activities Building at Arizona State Teachers College (Tempe), furniture, drapery and upholstery material, as well as the building itself, are products of WPA labor

do so. One of the main objectives of the educational program under the WPA at the present time is to help such persons become citizens by conducting classes along lines suggested by the Immigration and Naturalization Service, and at the end of the fiscal year plans were under way for the expansion of these classes as a defense measure.

The WPA in cooperation with the United States Office of Education and local sponsors has undertaken vocational training in the interest of national defense. This national defense vocational training project, as well as the training for household and institutional workers and the general vocational training provided under the adult education program of the WPA, are discussed in the section beginning on page 29.

Besides literacy and naturalization courses and vocational training, many general educational activities are carried on under the adult education program. Classes are conducted in a variety of subjects which have enabled hundreds of thousands of adults (292,000 in April 1941 alone), many of whom had only the most rudimentary education, to take more advanced work. A special workers' service program has also been undertaken in a number of states to meet the educational needs of both industrial and agricultural workers.

Activities in which the general public participates, such as lectures, forums, and art and music classes, are also conducted through the WPA education program. The public participation in these activities during the month of

WPA naturalization class for foreign-born residents of Kansas City (Mo.)

April 1941 indicates the wide interest shown in these educational pursuits. Attendance at lectures and forums approached 135,000 and enrollment in art and music classes totaled about 290,000 in that month.

Nursery school activities, closely integrated with parent education and homemaking, comprise the WPA family life education program. The nursery schools are designed to serve pre-school children from relief and low-income groups. The children are given well-balanced meals, a daily health inspection and essential health services, and opportunities for experience with books, pictures, music, creative materials, and such guidance as children need to learn personal independence and socially useful ways of living. Parent-education and homemaking classes relating to diets, budgets, child care, and similar subjects are conducted for the parents of nursery school and other children.

This WPA-built school (in Paris, Texas) can accommodate 600 students

Lunch time in a WPA nursery school

During the month of April 1941 about 37,000 children were enrolled in 1,300 WPA nursery schools, and about 132,000 adults attended parent-education and homemaking classes.

Persons with physical handicaps have also been benefited through WPA educational projects. Special classes have been conducted for institutionalized and handicapped children and adults. Visual aids have been made for the use of persons handicapped by loss of hearing. Three dimensional models, relief maps, and other devices have been produced on WPA projects for the use of the blind.

One of the 1,100 gymnasiums that have been built with WPA labor; this one is at Springville (Utah)

Library facilities have been extended to the general public both through the construction, enlargement, or improvement of about 1,000 library buildings and through the assistance furnished in the operation of thousands of libraries throughout the country. The extension of permanent library service systems to areas where such facilities were inadequate or nonexistent has been effected through demonstrations that include branch libraries and book deposit stations, augmented by bookmobile service in rural areas. In addition to library services rendered, nearly 87,000,000 books have been renovated or repaired by WPA workers since the inception of the program.

### Recreation

The sponsorship of projects in the field of recreation by local communities reflects the growing interest in facilities of this type by the general public. Substantial contributions have been made through the construction of recreational buildings; a total of 8,000 new buildings had been completed through WPA projects by the end of June 1941, and more than 5,000 existing recreational buildings had been renovated. During the same period 500 additions were completed. Included among the new buildings were nearly 400 auditoriums and 1,100 gymnasiums.

Some of the numerous recreational facilities, other than buildings that have been completed through project work, are illustrated by the accompanying photographs and a summary of accomplishment through June 30, 1941, is furnished in Table 33. Parks and playgrounds have been popular projects in all states; nearly 8,000 parks and more than 12,000 playgrounds were constructed or improved during the six-year period. It is difficult to summarize the items of accomplishment connected with park and playground development, but much work along such lines as tree and shrub planting, seeding and sodding, placement of playground equipment, and construction of outdoor fireplaces is performed in the operation of these projects. The buildings, roads, sidewalks, and other facilities constructed or improved in connection with the development of parks are included in the respective totals for those items.

Municipal swimming pool for the residents of Wichita (Kans.)

Among the recreational facilities that have resulted from WPA projects are more than 2,800 new athletic fields and nearly 2,400 that have been improved. Since the inception of the program 2,100 new stadiums, grandstands, and bleachers have been constructed; often these were built at the site of athletic fields con-

structed or improved by WPA workers. Nearly half the new stadiums, grandstands, and bleachers are small structures containing seats for less than 1,000 persons. About a fourth of them can accommodate between 1,000 and 2,000 persons, and the remainder are considerably larger; some of them have a seating capacity of more than 10,000.

TABLE 33. RECREATIONAL FACILITIES CONSTRUCTED OR IMPROVED ON PROJECTS OPERATED BY WPA

CUMULATIVE THROUGH JUNE 30, 1941

| Type of facility              | Number           |           |                               |
|-------------------------------|------------------|-----------|-------------------------------|
|                               | New construction | Additions | Reconstruction or improvement |
| Parks                         | 1,552            | 196       | 6,107                         |
| Playgrounds                   | 2,815            | 98        | 9,159                         |
| Athletic fields               | 2,816            | 63        | 2,382                         |
| Fairgrounds and rodeo grounds | 46               | 5         | 283                           |
| Tennis courts                 | 9,403            |           | 2,998                         |
| Golf courses                  | 237              |           | 351                           |
| Handball courts               | 1,668            |           | 156                           |
| Horseshoe courts              | 2,135            |           | 155                           |
| Swimming pools                | 712              |           | 319                           |
| Wading pools                  | 775              |           | 81                            |
| Ice skating areas             | 1,084            |           | 37                            |
| Ski trails (miles)            | 312              |           | 7                             |
| Ski jumps                     | 64               |           | 24                            |
| Bandshells                    | 214              |           | 27                            |
| Outdoor theatres              | 132              |           | 758                           |
| Stadiums and grandstands      | 2,101            | 114       |                               |
| Recreational buildings        | 8,046            | 540       | 7,317                         |
| Auditoriums                   | 372              | 128       | 402                           |
| Gymnasiums                    | 1,093            | 224       | 688                           |
| Other                         | 6,581            | 188       | 4,227                         |

Facilities for practically all forms of outdoor recreation have been provided through WPA projects. Thousands of handball, horseshoe, and tennis courts have been built. Hundreds of swimming and wading pools have been constructed, many of them in sections of the country where public facilities for water sports were not previously available. Golf courses, ski jumps, and bandshells are among the other facilities that have been provided for community recreation through WPA projects.

WPA recreational leaders in cooperation with local agencies have conducted leisure-time programs in both rural and urban communities. In most states the WPA recreation program is operated on a state-wide basis through the sponsorship of a department of education, public welfare, or other state agency. Local advisory committees composed of interested

citizens as well as representatives of churches, hospitals, labor unions, and business groups play an important part in the program. They assist in surveying community recreational needs, in securing the use of available recreational facilities, and in planning programs and training workers.

Under the WPA recreation program, leadership is provided in a variety of leisure-time activities including recreational opportunities appropriate and interesting to practically all groups in the community. The WPA activities are designed to supplement existing local recreation programs or to provide public recreational services in communities where they previously were lacking. Typical of the leadership activities are those that afford people the opportunity of participating in music, drama, and craft work, and developing other cultural and hobby interests. Games and sports and other kinds of physical recreation are conducted in accordance with local facilities and climatic conditions and with the preferences of local groups.

## Public Health and Sanitation

More healthful surroundings have been the objective of many of the projects initiated by local sponsors and operated through the WPA. These include projects relating to public health such as the construction and improvement of hospitals, sanitary and storm sewers, and water supply systems, as well as projects that provide medical and health services. Research studies on syphilis, tuberculosis, and industrial diseases conducted under the research program of the WPA have also made contributions in the field of public health.

Directly related to public health have been the projects through which 164 new hospitals and 92 hospital additions have been constructed and nearly 1,800 have been improved or renovated. More than three-fourths of the new hospitals are small institutions with a capacity of less than 50 beds, but a few of them are large enough to accommodate several hundred patients.

Many of the newly built hospitals were provided for communities in which no such facilities were previously available. Among these

is the new municipal hospital recently completed for Warroad, Minnesota, a rural town of nearly 1,200 population, in Roseau County. Prior to the construction of this building there was no modern public hospital in this part of the state. The building is of monolithic concrete construction, fireproof throughout, and has steam heat, air conditioning, and modern operating, X-ray, and laboratory equipment. It contains six wards and six private rooms (all with signal and public address systems), a six-bed nursery, a modern kitchen, offices, and nurses' dining room and lounge. Approximately a third of the cost of this 38-bed hospital was provided by the town of Warroad, which sponsored the project.

Some of the new buildings have been designed to meet special needs, as does the new Crippled Children's Home located near Florence, South Carolina. The Home was established in 1937 in a two-story residence in Florence, but only 12 children could be cared for there and the facilities were inadequate. The new establishment is located on a beautiful six-acre wooded knoll a short distance from the town. It consists of two large buildings, joined by a central heating plant and kitchen, in which about 40 children may be cared for. Facilities for physiotherapy and occupational therapy and other methods of treatment are provided. These facilities are available primarily to children whose parents are financially unable to provide such care through private hospitals. As the Home is the only institution of its kind in the state, the State Board of Health, through the Crippled Children's Commission, provides funds so that children from all parts of the state can be cared for at a nominal cost to the parents.

The WPA-built municipal hospital at Warroad (Minn.) serves a large rural area

Crippled Children's Home near Florence (S. C.) built under a WPA project and staffed largely by WPA workers

Medical and health services for persons who could not otherwise afford them have been furnished on WPA projects through assistance to local health agencies at medical and dental clinics and through training and furnishing nonprofessional workers in wards, kitchens, and other departments of tax-supported hospitals and institutions. Sometimes they have been extended to areas where such services were not previously available. The services have included medical and dental treatments and tests; immunization against diphtheria, scarlet fever, smallpox, typhoid fever, and other diseases; and hearing and vision testing of school children.

One of the clinics operated with WPA assistance is the Lymanhurst Children's Clinic in Minneapolis, Minnesota. The project is under the sponsorship of the Division of Public Health of the Hennepin County Board of Public Welfare. The clinic specializes in the treatment of heart ailments of children. In addition to the care which is provided for needy children who might otherwise be neglected, research into the factors involved in cardiac conditions is a valuable service rendered by the clinic. The WPA has provided personnel to assist in this work, such as nurses, orderlies, maids, clerks, a laboratory technician, and supervisory employees. In addition, the clinic building and the grounds around it have been improved by WPA workers.

During the past year a new training program for nonprofessional workers in hospitals and institutions was conducted as a part of the WPA defense activities. The scope of this pro-

gram is described in the section of this report beginning on page 29.

Important contributions to public health have been made by the WPA projects through which water supply and sewage disposal systems have been built or improved. Some of these projects provided modern sanitation facilities for communities which previously had to depend on more primitive methods. Others extended the water or sanitation systems of urban communities in which population growth had made the existing facilities inadequate. This kind of situation has been particularly prevalent since the initiation of the defense program which resulted in tremendous population increases in some centers of defense industrial activity.

In the six years of WPA activity more than 200 water treatment plants have been built or enlarged and 150 existing plants have been

^ Includes additions to existing facilities.

renovated. Berlin, New Hampshire, is one of the cities in which the construction of a water treatment plant through a WPA project made suitable for human consumption water that was previously considered unsafe. The city had experimented unsuccessfully with various drainage and strainer methods for several years in an effort to remove the high color and turbidity of its water, caused by the swampiness of the land near the source of supply. The new filtration plant, built at an elevation of about 300 feet above the city, is designed to eliminate all sediment and to supply water by gravity to the highest parts of the city. It is composed of eight cork-insulated steel tanks, with a combined capacity of some 54,000 gallons. These tanks can filter nearly 2,200,000 gallons of water every 24 hours.

In some communities the quality of the water supply has been good, but the distribution system was inadequate. The construction of more than 14,000 miles of new aqueducts, water mains, and distribution lines and the improvement of some 3,000 miles of existing water lines have materially increased the availability of the water supply in many such communities.

Water for Roma, Texas, a town of about 1,400 population, used to be drawn by hand

from the Rio Grande River and hauled in barrels to the residents. The Rio Grande is still the source of the town's water, but it is made available to the residents by a complete modern plant with intake, purification, and distribution facilities, built through a WPA project.

Storage facilities for water have been expanded through the construction of about 2,700 storage tanks and reservoirs and the improvement of 660 others. In addition to providing a larger supply of water for human use, this work has been an important factor in fire protection in outlying communities, as has also the new construction, enlargement, or renovation of about 1,400 pumping stations, many of which were for use in connection with water-supply systems.

One of the WPA reservoir projects under way at the end of the 1941 fiscal year will permit the storage of 4,600 acre-feet of water for Greeley, Colorado, and other communities nearby. The project work includes the construction of an earth-fill dam 400 feet long and 90 feet high, on the north fork of the Cache la Poudre River, and of a 325-foot diversion tunnel. The tunnel, drilled through solid rock, is being used to divert water from the stream bed during the construction of the dam. Upon the completion of the earthen barrier,

Sunbury (Ohio) sewage disposal plant showing filter beds and treatment plant

the tunnel will be used as an outlet to carry water from the reservoir into the Greeley city distribution system.

Inadequate treatment of sewage not only creates a serious health problem but often prevents the use of streams and lakes for recreational purposes. In order to relieve such conditions, local communities have sponsored the new construction or enlargement of more than 800 treatment plants and the improvement of nearly 400 others.

As the result of a recently completed sewage disposal project, Sunbury, Ohio, a town of about 900 population, now has for the first time a modern sewerage system. The new system involved the installation of five and a half miles of sewer lines and the construction of a disposal plant, including a pump house, an Imhoff settling tank, two small sludge beds, and four sand filter beds. The plant can handle 75,000 gallons of sewage daily and is designed so that the only power required for its operation is an electric pump which raises the sewage into the Imhoff tank, from which point it flows by gravity.

The size of the Sunbury plant is typical of the plants constructed by the WPA. Nearly half (48 percent) of the new sewage treatment plants built since the beginning of the program have had capacities of less than 100,000 gallons per day and 39 percent can handle from 100,000 to 500,000 gallons. Although most of the plants have been relatively small, 20 plants having capacities of over 2,500,000 gallons per day have been built through WPA projects.

Much of the WPA work in connection with sewage disposal systems has been the extension of sanitary facilities to additional users. Project operations have resulted in the construction of nearly 22,000 miles of new sanitary and storm sewers and the improvement of about 3,400 miles of sewer line. New service connections numbered nearly 540,000. In rural areas where the installation of sewerage systems was not feasible, more than 2,240,000 sanitary privies were built. Seven southern states accounted for over half of the total number of sanitary privies built through WPA projects.

Malaria control through the drainage of lowlands and the spraying of oil and insecticide on marshes and ponds to destroy the breeding

A few of the many recipients of hot school lunches served through WPA projects

places of disease-carrying mosquitos is another health activity in which the WPA has assisted. In the opinion of health authorities these controls have contributed greatly to the reduction of the spread of malaria. During the past year such projects have been operated near army camps to reduce the menace of the disease to troop concentrations.

Better health conditions are also the objective of WPA mine sealing projects. During the six years ending with June 1941 more than 218,000 openings of abandoned mines, most of which were located in the Ohio River Basin, were sealed by project workers. Mine sealing greatly reduces the sulfuric acid pollution of streams and thus cuts the cost of purification necessary to make their waters fit for human consumption. In addition to this benefit, fish losses and losses through corrosion of dams, locks, and steel boats are diminished.

## Welfare

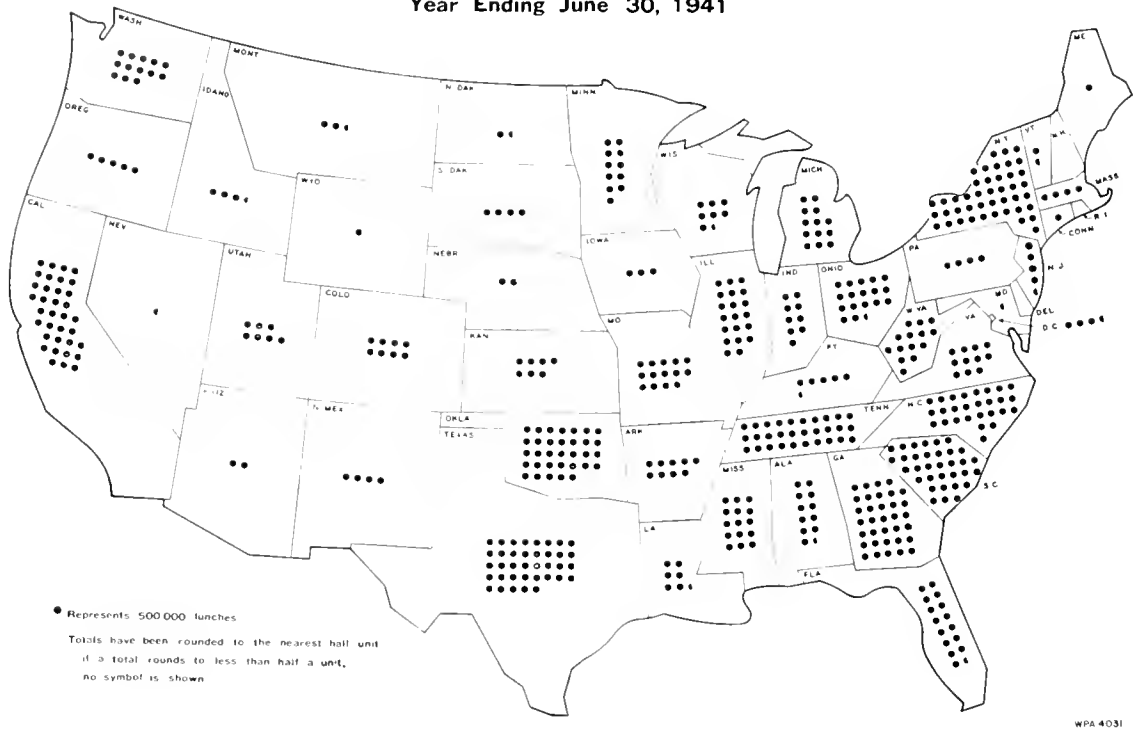

WPA work in the field of welfare includes a variety of activities ranging from the serving of school lunches to provision of assistance for needy families by housekeeping aides. This group of projects has not only expanded the welfare services available in communities all over the country, but also has provided jobs for a large share of the women eligible for employment under the WPA program.

An important part of the welfare activities, particularly during the past year, has been the school lunch program designed to improve the

CHART 12

LUNCHES SERVED ON WPA SCHOOL LUNCH PROJECTS

Year Ending June 30, 1941

health of school children by providing them with nutritious well-balanced hot lunches. School officials report that this service results in better grades, better school attendance, and better attitudes on the part of the children as well as better health. The increased local interest in this type of activity is indicated by the fact that 271,500,000 lunches were served during the 1940-41 school year as compared with 148,100,000 in the preceding school year. During one quarter of the past year, about 22,000 different schools located in three-fourths of the counties in the Nation participated in the school lunch program.

Canning and the preserving of food are done on many WPA projects. The food is obtained from WPA gardening projects, from the Surplus Marketing Administration, and from local sponsors. Much of the food preserving has been undertaken in conjunction with the school lunch program. A significant part of the work, however, is done for public institutions, as in

Colorado where more than 67,000 gallons of fruits and vegetables were canned during the year ending June 30, 1941 by a WPA canning project for the State Hospital at Pueblo. Most of the vegetables canned were produced in the hospital's gardens, but some were bought by

TABLE 35 ACCOMPLISHMENTS ON SELECTED TYPES OF WELFARE PROJECTS OPERATED BY WPA  
CUMULATIVE THROUGH JUNE 30, 1941

| Item                               | Number      |
|------------------------------------|-------------|
| Visits made by house-keeping aides | 26,515,000  |
| Lunches served to school children  | 765,153,000 |
| Food preserved:                    |             |
| Quarts canned                      | 60,255,000  |
| Pounds dried                       | 6,218,000   |
| Articles produced in sewing rooms  | 437,327,000 |
| Garments                           | 342,009,000 |
| Men's                              | 67,718,000  |
| Women's                            | 77,226,000  |
| Boys'                              | 59,237,000  |
| Girls'                             | 69,548,000  |
| Infants'                           | 41,568,000  |
| Diapers                            | 26,712,000  |
| Other articles                     | 95,318,000  |

the hospital from Colorado farmers. On all canning and preserving projects during the past six years more than 60,250,000 quarts of food-stuffs have been canned and nearly 6,220,000 pounds have been dried. The WPA has also furnished employment to certified workers on projects for the distribution of surplus commodities made available by the Surplus Marketing Administration.

Many garments and other articles for distribution to needy families and public institutions have been produced on WPA sewing-room projects operated in all states. More than 342,000,000 garments for men, women, and children and about 95,300,000 other articles such as sheets, pillowcases, towels, and other household goods had been produced by the end of June 1941.

Valuable services have also been extended to needy families by WPA housekeeping aides who go to their assistance when the regular homemaker has been incapacitated or when some other emergency exists. More than 26,500,000 visits were made by housekeeping aides during the entire period ending with June 1941. These aides, in rendering needed emergency assistance, introduce into the homes of the needy better methods and higher standards of health and housekeeping efficiency that will be of permanent value.

### Conservation of Natural Resources

WPA projects directed toward the conservation of natural resources such as soil, water, forests, fish, and game have played an important part in the national conservation program during the period that the WPA has been in operation. The work is generally undertaken with long-range objectives and the items of physical accomplishment that are available serve to indicate the scope of the activities rather than to measure their contribution.

Much of the work is intended to reduce the loss of soil through the destructive action of water or wind. The items of accomplishment that have this objective include the construction or improvement, during the six years ending with June 1941, of 1,500 miles of levees and embankments, 1,800 miles of retaining walls and revetments, and several hundred miles of

TABLE 36 CONSERVATION AND FLOOD CONTROL ACTIVITIES ON PROJECTS OPERATED BY WPA

CUMULATIVE THROUGH JUNE 30, 1941

| Item                            | Unit of measurement     | New construction | Reconstruction or improvement |

| Levees and embankments          | Miles                   | 525              | 1,023                         |
| Retaining walls and revetments  | Miles                   | 1,686            | 126                           |
| Riverbank and shore improvement | Miles                   |                  | 4,223                         |
| Stream-bed improvement          | Miles                   |                  | 7,907                         |
| Irrigation systems              | Miles of pipe and flume | 1,420            | 4,844                         |

<sup>a</sup> Includes additions to existing facilities.

jetties and breakwaters and of bulkheads. The improvement of 12,000 miles of stream bed and river bank and the riprapping of more than 15,000,000 square yards of surface serve a similar purpose. The reclamation of soil through irrigation canals and the placement or improvement of flumes and pipes has also been accomplished on WPA projects, principally in the far West. In addition, many of the dams built for water storage or flood control purposes or to create artificial lakes for recreational uses, also contribute toward the conservation of soil and water.

WPA work directed toward the conservation of forests has also been extensive. With this objective millions of trees have been planted in publicly owned forests throughout the Nation. In all, more than 147,000,000 trees have been planted. Forest protection work has included the construction or improvement of 6,900 miles of firebreaks, 7,500 miles of fire and forest trails, and many other facilities used in forest protection, such as forest ranger stations and fire look-out towers. Other protective work for the preservation of forests and crops has included such activities as spreading poisons for grasshopper and cricket control, prevention of plant and tree diseases, and destruction of noxious weeds.

Protection and propagation of game and fish represent a considerable part of the general conservation program on which WPA workers have been employed. Through their work, a total of about 270 fish hatcheries have been

newly constructed or enlarged and 150 others have been improved. On the Atlantic and Gulf Coasts nearly 8,100,000 bushels of oysters have been planted in depleted oyster beds. In other sections of the country a great deal of work has been done to increase the number of game birds and animals by the development of bird and game farms and through the construction and placement of shelter houses, feeding stations, and other devices in game refuges.

The objectives of conservation have been furthered by many other activities of the WPA. Incidental work related to park projects or to road construction (as, for example, roadside drainage, tree planting, and similar work) help to conserve soil, water, and other natural resources.

In the field of conservation research, the WPA has helped state universities and colleges to conduct a variety of studies. Free soil testing done with WPA assistance in some states has enabled farmers to take the steps necessary to replenish soil deficiencies. Research in fish propagation has assisted conservation commissions in finding more efficient ways of stocking lakes and streams. Other studies, aimed at determining the factors active in destroying certain wild animal life, have helped to develop preventive action for the preservation of these species.

## Other Accomplishments

The six general fields already mentioned, in which the WPA has assisted local communities in meeting both their normal and their defense needs through the employment of eligible unemployed workers, make up a considerable share of the WPA program. The needs of individual communities vary greatly, however, and it is practically impossible to include all the important phases of the program under a few general categories. For example, the work accomplished on the 38,500 educational buildings, 14,000 recreational buildings, and the 2,000 hospitals that is described on the preceding pages accounts for scarcely more than half of the total number of public buildings constructed or improved by WPA workers. The other 56,000 buildings include a variety of im-

portant structures. Among them are more than 700 armories, 2,400 firehouses, 5,600 office and administrative buildings, 4,200 garages, and some 700 buildings at penal institutions. The many other buildings constructed or improved through WPA projects vary in size and serve many purposes.

A new building constructed by WPA workers for the State Department of Archives and History in Montgomery, Alabama, is an example of these structures. The department was formerly housed in limited space in one wing of the Capitol Building, but it is now occupying a new building of its own that provides adequate office space and complete display and storage facilities for housing all records maintained by the department. The building is designed to harmonize architecturally with the State Capitol and with the new highway department building also constructed by the WPA.

Accomplishment on many projects operated by the WPA cannot be measured in physical terms. This is particularly true of the research projects that have been mentioned previously and many others such as housing, traffic, and engineering surveys; studies in costs of living, employment and unemployment, public finance, purchasing, taxation, education, and recreation; historical studies; personnel studies; and property inventories.<sup>1</sup> Through records projects, information on police and fire department activities, land holdings and transfers, and various other administrative matters has been arranged in convenient form so that it may be used readily in the daily operations of local governments. The work done on vital statistics records by the WPA proved particularly valuable when large numbers of persons were required to furnish proof of citizenship and age for employment in defense industries or for other activities under the defense program.

It is also difficult to measure the cultural contributions that have been made by the art and music projects which were established to bring the works of great composers and an appreciation of art to millions of people. During the month of April 1941, a total of about 6,200

<sup>1</sup> A list of research project reports may be found in the *Index of Research Projects* (Washington, D. C.: Work Projects Administration, Vol. I, 1938; Vol. II, 1939, in collaboration with National Resources Committee and State Planning Agencies, and Vol. III, 1939) and in the *Bibliography of Research Projects* (Washington, D. C.: Work Projects Administration, Nos. 1-4, 1940 and No. 5, 1941).

musical performances were given by unemployed musicians on WPA projects to an aggregate audience of about 2,800,000 persons. Besides the public performances by orchestras, bands, and choruses, the varied project activities include the development and organization of community music activities.

Under the art program, thousands of easel paintings, murals, prints, and works of sculpture have been executed and many art objects have been made for schools, libraries, and other public buildings. In addition, hundreds of drawings for the Index of American Design have been made by project workers, community art centers have been established, and exhibitions of fine art and handicrafts have been circulated to public institutions and art galleries in many sections of the country.

On writers' projects hundreds of books, pamphlets, articles, and leaflets dealing with various aspects of life in the United States have been completed. This group of publications includes guides for most of the states and for Alaska, Hawaii, and Puerto Rico under the American Guide series and also many volumes on cities and counties. Public response to these works has been favorable and large numbers of copies had been distributed by the end of June 1941. In addition, a collection of research data valuable to students of the American scene has been accumulated.

## Project Procedures

The great variety of project accomplishment that has been described in the preceding pages reflects differences in community needs for improvements and services, differences in the skills of the eligible unemployed workers available locally, and differences in the financial ability of sponsors to provide funds for non-labor project costs. Furthermore, during the 1941 fiscal year the requirements of the national defense program have been an important factor in the determination of the kinds of projects to be undertaken and, ultimately, of the kinds of accomplishments recorded. To provide channels through which these various requirements might find expression in the form of projects actually operated under the WPA program, detailed procedures have been de-

veloped. These are outlined briefly in the paragraphs that follow.

WPA projects are sponsored by public agencies having authority legally to undertake the responsibilities that sponsorship entails. Most project sponsors are local or state agencies, although some are agencies of the Federal Government, such as the War and Navy Departments and the United States Public Health Service. A large number of projects that were sponsored by local agencies have been certified by the Secretary of War or the Secretary of the Navy as important for military or naval purposes. Many projects for the development of civil airports, for example, are sponsored by a local public agency and certified by the Secretary of War.

Sponsors are required to assume an average of one-fourth of the total cost of projects in each state, except for certified defense projects which may be exempted from this requirement. This does not mean that each sponsor is required to assume one-fourth of the total cost of the project he proposes, but rather that the sponsors in each state, taken as a whole, must bear one-fourth of the total cost of all non-Federal projects undertaken in the state, exclusive of certified defense projects. Such a provision is essential in order that states may cope with unemployment problems in areas where sponsors are financially unable to meet as much as a fourth of the total costs. In actual operation, the sponsor generally provides most of the materials and supplies that are utilized on a project and the Federal Government pays the wages of the eligible unemployed who receive employment through the project. The Federal Government is restricted to an average expenditure of \$6 per month per worker for other than labor costs, again with the exception of certified defense projects. The Commissioner of Work Projects, however, is empowered to raise the average to as much as \$7 if rising prices of materials justify it.

Proposals for projects that sponsors wish to initiate are submitted to the state WPA offices, accompanied by detailed plans, specifications, cost estimates, statements covering the reasons for the prosecution of the project, and other related information. These project proposals are reviewed in the WPA state offices, which

utilize the technical advice of state agencies such as boards of health, welfare, and education and highway commissions.

After acceptance of projects in the state office they are submitted to the Federal WPA in Washington for final review. Proposals for certain types of projects are subject to review by other Federal agencies concerned with the respective fields of activity. For example, the Public Roads Administration, Civil Aeronautics Authority, War Department, Navy Department, Public Health Service, Bureau of Biological Survey, and National Park Service review the technical aspects of the proposed WPA projects that fall in their respective fields. Each application approved by the WPA must also be approved by the President before the project becomes available for possible operation.

It is not possible to place in operation all the projects submitted by sponsors that receive final approval. The projects selected must

necessarily be those which furnish jobs that utilize the skills of the unemployed workers available within a community at the time, since the primary purpose of the WPA program is to furnish jobs to the needy unemployed through useful public projects. Because all projects cannot be placed in operation at any one time, a reserve of approved projects is accumulated, which can be drawn from as the need arises. These reserves, consisting of projects that provide a variety of jobs for both men and women and for professional and technical as well as unskilled workers, have permitted the rapid expansion of the program when an increase in unemployment makes such action necessary. Experience has shown that such projects as highway, road, and street projects and conservation projects, on which employment can be readily expanded or contracted, are important to the project reserve and provide for the WPA program its essential flexibility.

# FEDERAL WORK PROGRAMS AND PUBLIC ASSISTANCE

**S**INCE the fiscal year 1936, aid has been extended to needy persons through a number of specialized public programs. Through some of these, jobs have been provided for unemployed workers, and through others, assistance has been provided for various groups of persons who are unable to work.

The WPA program throughout its history has been the chief employment-providing program of the Federal Government and has accounted for the major share of the total numbers that have been employed on the various Federal work programs. Notwithstanding the reduction in WPA employment during the 1941 fiscal year, more than half the persons working on all Federal work program projects in June 1941 were employed on projects financed from WPA funds. The National Youth Administration and the Civilian Conservation Corps also accounted for relatively large proportions of the total. A very small percentage of the total was represented by employment on the construction program of the Public Works Administration and on other Federal agency projects that are financed from emergency relief appropriation act funds. The low level of employment on the latter groups of projects reflected the limited amount of funds available for these activities.

Under the Social Security Act, the Federal Government has cooperated with the states in financing assistance programs for the needy

aged, the needy blind, and dependent children. The relative importance of these programs has increased steadily since the fiscal year 1936, when Federal participation began. Their current high levels stand in sharp contrast to the recent trends of most of the other work and assistance programs. The other public assistance programs—the general relief program and the Farm Security Administration grant program—have followed a generally downward course for some time.

Prior to the fiscal year 1936, when the WPA program was placed in operation, general relief was the principal form of assistance given to needy persons of all types including those whose need resulted from unemployment. The Federal Emergency Relief Administration financed a large part of the total cost of the general relief and related programs in the period from May 1933 through December 1935. From November 1933 through March 1934, when the Civil Works program was in active operation, FERA activities were temporarily curtailed. State and local governments became entirely responsible for the financing of the general relief program after FERA grants to the states were discontinued.

## Households and Persons Aided

During the fiscal year 1941, sizable reductions were recorded in the estimates of the undupli-

CHART 13

### HOUSEHOLDS AND PERSONS BENEFITING FROM EMPLOYMENT ON FEDERAL WORK PROGRAMS AND PUBLIC ASSISTANCE

January 1933 - June 1941

ated numbers of households and persons receiving Federal work program earnings and public assistance payments.<sup>1</sup> In each month of the fiscal year, the estimated totals were substantially lower than those for the same month of the preceding year (Table 37).

About 5,055,000 households, including 14,331,000 persons (about 11 percent of the country's population), received Federal work program earnings or public assistance payments in July 1940. The number of households fluctuated somewhat irregularly during the two subsequent months and then began to reflect seasonal

<sup>1</sup> The series of estimates relating to the unduplicated total numbers of households and persons benefiting from Federal work and public assistance programs and to the aggregate amount of payments to these recipients that are presented herein, differ from those that appeared in the 1940 issue of the *Report on Progress of the WPA Program* in that they exclude data pertaining to construction projects financed from RFC funds and from regular Federal appropriations. For purposes of comparison, data for these activities have been combined under the heading "regular Federal construction projects" and are shown in separate sections of Tables 39 and 40. These changes were made upon the recommendation of the Joint Committee on Relief Statistics of the American Statistical Association and the American Public Welfare Association. For descriptions of programs and of estimates of households and persons receiving Federal work program earnings and public assistance payments, see appendix (Explanatory Notes—see the *Report on Progress of the WPA Program*, June 30, 1940, pp. 90 to 109 and T. E. Whiting and T. J. Woolter, Jr., *Summary of Relief and Federal Work Program Statistics, 1933-1940* (Washington, D. C., Work Projects Administration, 1941) for more detailed descriptions of the various programs.

increases in need, reaching a total of 5,458,000 in February 1941, the high point of the fiscal year. This, however, was the smallest February total since 1933 and was nearly a third below the peak reached in February 1934.

The number of persons aided (including dependents of family heads) began to move upward in October and continued to rise until January 1941, when the year's high point for this series, 15,064,000, was reached. This total represented a record low for the month of January and was only a little more than half as large as the peak figure of February 1934.

During the last four months of the fiscal year 1941 successive declines were recorded in both households and persons. By June the number of households

had dropped to 4,689,000, a net reduction of 13 percent from June 1940, and the number of persons had declined to 12,364,000. The latter figure represented 9 percent of the population and was the smallest number of persons aided in any month of the entire period beginning with January 1933. It represented a net reduction of 18 percent from June 1940. The more rapid rate of decline in the number of persons than in the number of households reflected the increase during the year in the proportion of households that typically represent only one or two persons—such as those receiving aid under the old-age assistance program.

### Payments to Recipients

The aggregate amount of Federal work program earnings and public assistance payments for the country as a whole was also considerably smaller in each month of the fiscal year 1941 than a year earlier (Table 38). As in preceding years, the monthly changes in total payments were generally somewhat sharper and more irregular than those recorded in the totals

of households and persons. Changes in total payments are influenced by variations within a given program and among the several programs with respect to the amounts paid to individual recipients. They are also subject to fluctuations that result from variations in the number of pay days and working days in different months and from technical factors associated with accounting procedures.

Nevertheless, the total amount of monthly payments made under the several programs followed approximately the same seasonal trends as the recipient data. From a total of \$212,000,000 in July 1940, the monthly amount rose to \$222,000,000 in January, the highest point reached during the year. This is to be compared with the preceding year's peak of \$254,000,000 and the all-time high of \$308,000,000, reached in January 1934 when the Civil Works

program was in operation. Declines occurred during four of the five remaining months of fiscal year 1941, and by June the total had dropped to \$188,000,000, the smallest since October 1934.

Total payments made under the various programs during the 1941 fiscal year amounted to \$2,520,000,000 or 13 percent less than in the preceding year. The reduction reflected the contraction that took place in all the Federal work programs, except those operated by the National Youth Administration, and in the general relief and Farm Security Administration programs. To a large extent, however, the reduction was determined by the magnitude of the declines in total payments under the WPA and general relief programs. WPA earnings during the year amounted to \$1,143,000,000, or about 14 percent less than in the preceding year,

<sup>A</sup> See notes on pp. 98 and 99 for description of data included.

and general relief payments totaled \$339,000,-000, or about a fourth less than in the fiscal year 1940. Although substantial increases occurred in total payments made under the NYA programs and the special assistance programs in which the Social Security Board participates (amounting to 22 and 13 percent, respectively, for the year), they were not great enough to offset the reductions in WPA and general relief outlays.

Payments for all Federal work programs combined represented about 59 percent of the total payments in the fiscal year 1941, as compared with 63 percent in the preceding year. In spite of the fact that WPA earnings decreased in absolute amount, they accounted for nearly as large a share of the total in the fiscal year 1941 as in 1940 (45 as compared with 46 percent). Payments to CCC enrollees, which had also declined somewhat in total, represented about 8 percent in both 1940 and 1941. Earnings on PWA projects, which in 1940 accounted for more than 6 percent of total program payments, in 1941 represented less than 2 percent. All public assistance payments combined accounted for 41 percent of the total for all programs in the fiscal year 1941, as compared with 37 percent in the preceding year. The proportion represented by the special assistance programs increased from nearly 21 percent to about 27 percent, while general relief payments declined from nearly 16 percent in 1940 to less than 14 percent in 1941.

Monthly totals of recipients assisted under the individual programs during the fiscal year

1941 are shown in Table 39, and a parallel series on the amount of payments made under these programs is presented in Table 40. In addition, comparable data for previous years and state data for the month of June 1941 are shown in Appendix Tables XX to XXIII.

## Work Projects Administration

The WPA since 1935 has operated a program of useful public projects on which jobs have been provided for unemployed workers who have been certified by local public relief agencies as being in need.<sup>2</sup> During the fiscal year 1941, the WPA program provided employment for an average of approximately 1,700,000 workers in the continental United States. This was about 17 percent less than the average number employed during the preceding year. Approximately 30 percent of the persons employed at the end of the year were working on national defense projects.

Trends in WPA employment and earnings during the fiscal year 1941 followed the usual seasonal patterns. Rising steadily during the first half of the year, the average number of persons employed reached a high point of about 1,858,000 in January. In subsequent months the number declined until only 1,376,000 workers were employed in the continental United States in June 1941. This was the smallest average for any month since October 1935 and

<sup>2</sup> WPA project activities, employment, expenditures, and other aspects of the WPA program are discussed in detail in earlier sections of this report. A brief summary is included here to facilitate comparison with other programs.

a decrease of more than a fifth from the total for the preceding June. Monthly earnings on WPA projects during the year ranged from a high point of \$103,500,000 in January to a low of \$80,800,000 in June 1941. The June figure was the smallest monthly total that had been recorded since November 1935.

### National Youth Administration

Part-time employment for young men and young women is provided on the student work and out-of-school work programs of the NYA. The student work program offers work opportunities for high school and college students who would be unable to continue in school without this assistance. On the out-of-school work program, young persons who are no longer in full-time attendance at school are given part-time employment on public projects.

Employment on the NYA student work program during the 1940-41 school year was at approximately the same level as during the preceding year. After the usual decline in the summer vacation months, the program expanded rapidly in September, and by October about 352,000 students were employed on NYA

projects. The numbers increased during most of the subsequent months until a peak of 478,000 was reached in April 1941, and then declined to 356,000 in June. During the course of the school year the students earned a total of about \$27,100,000. Maximum monthly earnings amounted to \$6 for high school students, \$20 for undergraduate college students, and \$30 for graduate students.

The out-of-school work program provides training and work experience in the basic mechanical trades and in various specialized fields on projects for the construction and improvement of public facilities such as buildings and roads and for the provision of professional, clerical, and other assistance in a variety of nonconstruction fields. Projects designed to develop specialized skills of importance to the national defense program were given emphasis during the 1941 fiscal year.

During the fiscal year 1941, the NYA out-of-school work program provided part-time employment on public projects to a greater number of young men and young women who were in need of employment than ever before. In July 1940, 196,000 youths were employed on the program. By December the number

<sup>A</sup> See notes on pp. 98 and 99 for description of data included. Comparable data for earlier years are given in Table XX of the appendix.

<sup>B</sup> Does not include data pertaining to regular Federal construction projects.

<sup>C</sup> Less than 500.

increased to 326,000, and in February it reached a peak of 482,000. The high point in employment during the preceding year had been 336,000. By June 1941 employment had declined to 384,000—a figure that was higher than the total for any month of any preceding year.

Monthly earnings on NYA out-of-school work program projects fluctuated between \$3,100,000 and \$9,300,000 during the various months of the 1941 fiscal year, and totaled nearly \$80,400,000. The earnings of individual workers ranged from \$14 to \$24 per month, depending upon the geographic location and size of the community in which the young person was employed.

### **Civilian Conservation Corps**

Since its initiation in 1933, the Civilian Conservation Corps has provided employment for unemployed young men, on projects for the conservation and development of natural resources. The enrollees are maintained in camps and are given opportunities for education and vocational training. Early in the 1941 fiscal year, CCC training was intensified and expanded to give special emphasis to trade and industrial courses in fields important to the national defense, such as electrical repair work, automobile and airplane servicing, metal work, and blueprint reading.

During the first six months of the 1941 fiscal year, CCC enrollment averaged about 270,000 per month, or only slightly less than during the same months of the preceding year. In the months subsequent to February 1941, however, a marked decline occurred in the number of enrollees. From an average of 244,000 men in March, enrollment dropped to 195,000 in June. The extraordinarily low level reached in June 1941 anticipated a reduction in the number of camps scheduled for operation in the new fiscal year. In general, the downward trend in CCC enrollment during the latter half of the year reflected a decrease in the volume of applications for enrollment and an increase in the numbers of enrollees leaving the Corps prior to the expiration of their enrollment terms.

The estimated monthly earnings of CCC enrollees ranged from \$12,900,000 to \$19,000,000

during the fiscal year and totaled \$201,706,000 for the year. These estimates include not only the maintenance that the enrollees receive in the camps but also the cash allowances of which a large share is allotted to dependents. Effective January 1, 1941, the allotments to dependents of junior enrollees (men between 17 and 23 years of age, who make up the bulk of the enrollment) were reduced from \$22 to \$15 so that the \$7 difference might be set up as a savings account for the enrollee, payable to him upon his discharge from the Corps.

### **Public Works Administration and Other Federal Agency Employment**

The Public Works Administration and a number of Federal agencies other than the WPA, CCC, and NYA have also undertaken public construction projects that have been financed from emergency appropriations. For several years, however, this group of projects has provided a progressively smaller number of jobs. No new appropriations were made for the PWA program in 1941, and total employment on projects financed with PWA funds dropped from 63,000 persons in July 1940 to only 8,000 in June 1941. In July 1939 about 227,000 workers had been employed on PWA projects. Employment on other Federal agency projects financed from emergency appropriations totaled only about 1,000 persons during most months of the 1941 fiscal year.

Total earnings on PWA and other Federal agency projects amounted to barely a fifth as much in the fiscal year 1941 as in the previous year. Workers on PWA projects received \$38,300,000 in 1941 as compared with \$186,400,000 a year earlier, and those employed on other Federal agency projects earned \$1,400,000 as against \$2,300,000 in 1940.

### **Special Types of Public Assistance**

The numbers aided under the three special types of assistance in which the Federal Government participates under the Social Security Act—old-age assistance, aid to dependent children, and aid to the blind—increased substantially in the 1941 fiscal year. During this period the number of recipients of old-age assistance increased 10 percent; of aid to dependent children,

about 13 percent; and of aid to the blind, 3 percent. Federal grants are made on a matching basis (up to specified limits) to states operating these programs under plans approved by the Social Security Board.

During the 1941 fiscal year, old-age assistance was administered in all states with the financial participation of the Federal Government. The number of recipients of old-age assistance increased steadily, from a total of 1,986,000 in July 1940 to 2,166,000 in June 1941. Monthly payments from Federal, state, and local funds for this type of assistance increased from \$39,600,000 in July 1940 to nearly \$45,700,000 in June 1941, a rise of 15 percent. The relatively larger increase in payments than in the number of recipients reflected increases in the average amount extended per recipient in the majority of the states, among which Texas and Washington were outstanding. In June 1941 the average monthly amount per recipient of old-age assistance ranged from less than \$10 in six states to more than \$30 in three states. In total, nearly \$506,200,000 was paid to recipients of old-age assistance during the year.

Two states—Mississippi and South Dakota—were added during the 1941 fiscal year to the number granting aid to dependent children under plans approved by the Social Security Board. By June, Federal, state, and local funds were being used to assist needy children in 43 states; in the remainder of the states such aid was being administered under state laws from state and local funds without Federal participation. In June 1941, 391,000 families,

CHART 14  
RECIPIENTS OF FEDERAL WORK PROGRAM EMPLOYMENT  
AND PUBLIC ASSISTANCE, BY PROGRAM

July 1935 - June 1941

including 942,000 children, were recipients of aid to dependent children. This figure represented an increase of 45,000 families, or 13 percent, over the June 1940 total. More than half the increase occurred in Pennsylvania,

<sup>A</sup> See notes on pp. 98 and 99 for description of data included. Comparable data for earlier years are given in Table XXI of the appendix.<sup>B</sup> Does not include earnings on regular Federal construction projects.

where more liberal eligibility standards became effective during the year. Payments from Federal, state, and local funds for aid to dependent children increased 17 percent from June 1940 to June 1941 (from \$11,000,000 to \$12,800,000), and totaled nearly \$145,700,000 for the 1941 fiscal year. As in the case of the old-age assistance program, the relatively larger rise in payments than in the number of recipients was the result of slight increases in the average amount of aid per family in the majority of the states.

The smallest of the special assistance programs—aid to the blind—showed comparatively minor increases during the year. As in the preceding fiscal year, 42 states provided aid to the blind under plans approved by the Social Security Board, and four additional states furnished such aid under state laws without Federal participation. Between June 1940 and June 1941 the number of recipients increased by 3 percent to 74,000 and the amount of payments increased by 4 percent to \$1,900,000. A total of more than \$22,300,000 was paid to recipients of aid to the blind during the course of the 1941 fiscal year.

## General Relief

Public general relief has been financed from state and local funds since the discontinuation, during the fiscal year 1936, of grants by the Federal Emergency Relief Administration to the states. Among the persons aided under this residual program are the physically handicapped and other unemployable persons who do not meet the eligibility requirements of any of the special assistance programs, as well as some of the employable persons for whom jobs are not available on work programs because of shortages of funds or other causes. Also, general relief is sometimes extended to needy families receiving assistance under other programs when their income from these other sources is not sufficient to meet minimum requirements.

The downward trend in the national general relief totals that had been evident in the two previous years was accentuated during the fiscal year 1941.<sup>3</sup> Instead of the upward movement that usually takes place in the fall and winter

<sup>3</sup> The comparability of the general relief totals for months subsequent to August 1940 with those for previous months is affected to some extent by the exclusion, beginning with September 1940, of cases receiving medical care only and of total payments for medical care.

months, a steady decline in the number of cases occurred from July through November 1940, and only slight increases were evident in December and January. The estimate for January was only 1,257,000 cases, a decline of roughly 100,000, or 8 percent, from the estimate for the preceding July, and the smallest January total in the period beginning with 1933 for which nation-wide statistics are available. The decline that began in February continued throughout the remainder of the year, particularly heavy reductions being recorded during the last quarter. By June 1941, the estimated national total number of cases had dropped to 934,000, the first total of less than 1,000,000 that had been recorded in the entire period beginning with January 1933. The reduction from June of the preceding year amounted to about 420,000, or slightly less than a third.

A similarly pronounced downward movement was evident in the total monthly payments for general relief. In July 1940, general relief payments totaled about \$32,200,000 or 11 percent less than in the preceding July. This, nevertheless, was the highest monthly total recorded during the fiscal year 1941. The total for June 1941 was only \$20,600,000, the lowest of the entire period beginning with January 1933. General relief payments during the year totaled a little less than \$339,300,000, as compared with a total of about \$453,400,000 during the fiscal year 1940.

Reductions in general relief totals occurred in practically all the states, although a major portion of the national decline occurred in the large industrial states. The contraction in the general relief rolls in the larger states was primarily attributable to increased employment and income. This factor was also responsible to some extent for the changes that occurred in most of the other states. In some areas, decreases were partly attributable to reductions in available funds and more restrictive eligibility requirements. Expansion of the old-age assistance and aid to dependent children programs also contributed materially to the downward trend in the general relief rolls in a number of states. Declines were comparatively small

in a few states where little assistance was given during the year to employable persons.

For the continental United States as a whole the average amount of general relief extended per case during the month of June 1941 was about \$22. Average monthly payments do not furnish an accurate measure of relief standards, since they are affected by various factors such as the average number of persons per case, the extent of turnover in relief rolls, and the extent to which assistance supplements other income. Nevertheless, it is evident that great variation existed in the general relief standards prevailing in the several states. Only half a dozen states reported average benefits that were higher than the national average, but in about a dozen states the average was less than \$10 in June. A few states with comparatively high payments had considerable influence on the national average. Nearly half of the cases receiving general relief during June 1941 were located in three states in which the average monthly payments per case ranged from \$19 to \$36. These three states included 24 percent of the national population.

### Farm Security Administration Grants

The Farm Security Administration, as a part of its rehabilitation activities, makes grants to destitute and low-income farmers to provide them with food, clothing, and other family needs. During the 1941 fiscal year relatively small numbers of grants were made, ranging from 31,000 to 66,000 in the various months. Even the largest monthly total contrasts sharply with the winter peaks of from 119,000 to 335,000 that had been recorded in preceding years. Total grants during the year amounted to about \$14,100,000, which was 29 percent less than in the fiscal year 1940 and 59 percent less than in 1937. The low level of grants in the 1941 fiscal year reflected not only the general improvement in agricultural conditions but also the fact that there had been relatively few of the emergency situations, such as those arising from floods and droughts, that necessitated program expansion in previous years.

# EXPLANATORY NOTES

WPA statistics presented in this report relate to activities conducted under the program from its initiation in the summer of 1935 through June 30, 1941. The figures cover activities on all WPA projects financed in whole or in part with WPA funds. Most of these projects have been operated by the WPA itself, but in the period beginning with July 1938 a few have been operated by other Federal agencies with funds appropriated to the WPA and allocated to these agencies. Unless otherwise specified, all statistics presented in this report cover the continental United States and the territories of Alaska, Hawaii, Puerto Rico, and the Virgin Islands. Many of the tabulations relate to fiscal years (July 1 through June 30).

## Employment Statistics

WPA employment data shown in the first three tables of the appendix relate to persons employed on all WPA projects. Tables IV and VI relate to employment on projects operated by the WPA itself, and Table V covers only employment on WPA projects operated by other Federal agencies. None of the figures shown in these tables include administrative employees or workers paid by project sponsors.

Monthly WPA employment figures have usually been used in both the appendix and the text tables except for certain distributions that were reported only for selected weeks. The monthly statistics are averages of the numbers employed on Wednesday of each week. The basic weekly figures are summarized for the United States and territories in Table I of the appendix.

## Financial Statistics

Tables VII, VIII, and IX are based on reports of the Department of the Treasury and relate to Federal funds allocated or appropriated to the WPA under the ERA Acts of 1935, 1936, 1937, 1938, 1939, and fiscal year 1941. The data cover project operations and administrative expenses of WPA (including administrative expenses of the NYA prior to July 1939); other Federal agency project operations and

administrative expenses financed with allocations of WPA funds; the purchase of surplus clothing for needy persons and aid to self-help and cooperative associations under the ERA Act of 1938; tornado relief under the ERA Act of 1939; and the settlement of property damage claims under the ERA Acts of 1939 and fiscal year 1941. Some of the terms used in these tables are defined in the following paragraphs:

1. "Allocations" represent amounts directly appropriated to the agency or ordered transferred to it, warrants for which have been issued by the Treasury.

2. "Obligations," as used in this report represent actual or contingent liabilities incurred against allocated funds. The figures are cumulative and represent paid, as well as unpaid, obligations. Requisitions for materials, supplies, and equipment are set up as obligations. Items such as pay rolls, rents, and travel expenses, which are certain to become due in a short period, are obligated one period in advance.<sup>1</sup>

3. "Expenditures" represent checks issued in payment of pay rolls and other certified vouchers.

Neither obligations nor expenditures necessarily provide a wholly accurate measure of operations at any given time since obligations in part reflect future operations, and expenditures lag behind current operations because of the time consumed in making actual payments.

Tables X to XVI, dealing with expenditures of WPA and sponsors' funds on projects operated by WPA, are based on data compiled from WPA project ledgers maintained by the WPA divisions of finance in the several states.

## Project Accomplishment Statistics

Tables XVII, XVIII, and XIX relate to the number of physical units of work that were

<sup>1</sup> This definition of "obligations" does not correspond with that used under the revised accounting procedure effective with fiscal year 1942. Under the new procedure, the definition given above applies to "encumbrances," and the term "obligations" covers only those transactions which legally reserve an appropriation for expenditure. For example, the obligations recorded for labor costs in the fiscal year 1942 include only earnings for completed pay periods plus accrued earnings for incomplete pay periods; in general, those recorded for nonlabor costs include only WPA requisitions for which purchase orders, bills of lading, or similar documents have been issued.

completed on projects operated by WPA from the beginning of the program through June 1941. The figures shown for certain activities on community service programs, however, refer to the extent of public participation during the month of April 1941. The data presented are limited to selected items of accomplishment.

### Federal Work Program and Public Assistance Statistics

The estimated unduplicated total numbers of households and persons, discussed in the section on Federal work programs and public assistance and presented in Table XX include both relief and nonrelief recipients, exclusive of administrative employees, in the continental United States who benefited under the following agencies and programs: emergency relief (general work and direct relief and FERA special programs) financed in part from FERA funds; general relief, including outdoor poor relief, financed from state and local funds; subsistence grants made by the Farm Security Administration; the three special types of public assistance (old-age assistance, aid to the blind, and aid to dependent children) which, from February 1936, have been financed in part from Federal funds under the Social Security Act; the Civil Works program; the Work Projects Administration; the Civilian Conservation Corps; the National Youth Administration; the Public Works Administration; and all other work and construction projects of Federal agencies other than WPA, PWA, NYA, and CCC that have been financed from funds made available by emergency relief appropriation acts.

The estimates differ from those published in the *Report on Progress of the WPA Program, June 30, 1940* in that they exclude data pertaining to regular Federal construction projects; these data are shown separately, however, in all the tables covering individual programs. The series shown in this report as well as in the earlier publications exclude recipients of institutional care (with the exception of transient relief included under the special programs of the FERA), surplus commodities (including those made available through the stamp plan

and the direct distribution system of the Surplus Marketing Administration), and rural rehabilitation loans made by the Farm Security Administration; they also exclude persons benefited by the unemployment compensation and old-age and survivors' insurance programs of the Social Security and Railroad Retirement Boards.

The monthly figures on aggregate payments made to these recipients, which are presented in Table XXI, were obtained by adding the amounts reported or estimated for the various programs. They exclude administrative costs and material, equipment, and other nonlabor costs incident to project operations.

In order to arrive at the total numbers of households and persons, it was necessary to make several types of adjustments. Basic recipient data reported for the majority of programs correspond fairly closely to the number of households (families and single persons), but, for certain programs, reported recipient data were converted to a household basis. The number of persons benefited, including dependents of family heads, was reported monthly for only a few of the programs; data for other programs were estimated from information available from special reports and sample studies.

Allowances were made for duplication because some households and persons benefit from more than one program in the course of any given month. Duplication between programs is sometimes technical in nature—a result of the fact that assistance or work may be provided during part of a month under one program and during the remainder of the same month under another program. This type of duplication has attained important proportions at certain times, as, for example, in the fall of 1935.

Unduplicated totals of households and of persons are rough approximations which are presented only on a nation-wide basis. The allowances for duplication in nearly all instances were based on sample information which is not adequate for making adjustments in totals for individual states. Figures for the country as a whole are not suited for use in adjusting state figures because of the existence of wide variation in the extent of duplication among the different states. Unduplicated state totals consequently

have not been developed. Recipient data for individual programs, however, are shown by states, for June 1941, in Table XXII.

The unduplicated estimates were prepared jointly by the Social Security Board and the WPA. Duplication within the three special types of public assistance (old-age assistance, aid to the blind, and aid to dependent children) and between these programs and general relief for months subsequent to June 1936 was estimated by the Social Security Board. All other adjustments for duplication were prepared in accordance with methods developed by the

Division of Research and the Division of Statistics of the WPA.

The coverage of the basic statistics on the number of recipients and amount of payments to recipients for each of the Federal work and public assistance programs, which are shown in Tables XX to XXIII, is indicated in the footnotes to the tables. All figures relate to the continental United States or its political subdivisions and, unless otherwise specified, refer to the calendar month. The source of the basic statistics, unless otherwise specified, is the WPA.

TABLE I.—NUMBER OF PERSONS EMPLOYED ON WPA PROJECTS

WEEKLY, AUGUST 1935-JUNE 1941

| Month     | Year ending June 30, 1935 |                          |                                             | Year ending June 30, 1936 |                          |                                             | Year ending June 30, 1937 |                          |                                             | Year ending June 30, 1938 |                          |                                             | Year ending June 30, 1939 |                          |                                             | Year ending June 30, 1940 |                          |                                             | Year ending June 30, 1941 |                          |                                             |

<sup>A</sup> Covers funds appropriated by the ERA Acts of 1935, 1936, 1937, 1938, 1939, and fiscal year 1941, and by deficiency appropriations listed in footnote 2, p. 9.

<sup>B</sup> Total allocations do not include \$8,864,559 of 1938 and 1939 fund funds which continued to be available for obligation on Federal construction projects through provisions of the fiscal year 1941 act, of this amount, \$7,288,887 was available for projects operated by WPA and \$1,575,672 for WPA projects operated by other Federal agencies.

<sup>C</sup> Allocations of WPA funds to these other Federal agencies were made under the ERA Acts of 1935, 1939, and fiscal year 1941, and the last three of the deficiency appropriations referred to in footnote A.

<sup>D</sup> For the use of the Bureau of Internal Revenue and the Division of Tax Research.

<sup>A</sup> Expenditures during the fiscal year include, in addition to amounts expended under the current ERA act, the liquidation of obligations incurred under previous ERA acts.

<sup>B</sup> Expenditures of WPA funds by these other Federal agencies began in the fiscal year 1939.

<sup>C</sup> For the use of the Bureau of Internal Revenue and the Division of Tax Research.

<sup>a</sup> Includes programs of other Federal agencies financed by allocation of WPA funds under the RRA Acts of 1938, 1939, and fiscal year 1941. Expenditures on these programs began in July 1938. Includes NYA administrative expenses incurred prior to July 1939, when the WPA and NYA programs were administered jointly.

<sup>b</sup> Separate data on WPA and other Federal agency expenditures are given by state for the fiscal years 1939 and 1940 on p. 123 of the *Report on Progress of the WPA Program*, June 30, 1940.

Source: Based on reports of the U. S. Treasury Department.

TABLE X.—AMOUNT OF WPA AND SPONSORS' FUNDS EXPENDED FOR NONLABOR PURPOSES ON PROJECTS OPERATED BY WPA, BY TYPE OF PURCHASE OR RENTAL AND BY SOURCE OF FUNDS

CUMULATIVE THROUGH AND YEAR ENDING JUNE 30, 1941

<sup>A</sup> Figures represent the number of recipients of public relief or persons employed during the calendar month except where otherwise specified. Administrative employees are excluded. Source: WPA, Division of Statistics except where otherwise specified.

<sup>B</sup> Estimates of the net number of households and persons receiving public relief and employment on Federal work programs during the month. Does not include employment on regular Federal construction projects, which increased substantially during the fiscal year 1941, reflecting expansion in construction for defense purposes. Duplication within the three special types of public assistance, and between these types and general relief, estimated by the Social Security Board for months subsequent to June 1936. All other adjustments for duplication prepared by the WPA Divisions of Statistics and Research.

<sup>C</sup> Average weekly employment on WPA projects, including those operated by other Federal agencies. Corrected to August 10.

<sup>D</sup> Source: National Youth Administration for months subsequent to June 1939.

<sup>E</sup> Average enrollment. Source: Civilian Conservation Corps.

<sup>F</sup> Average weekly employment during the month ending on the 15th of the specified month. Source: U. S. Department of Labor, Bureau of Labor Statistics.

<sup>G</sup> Average weekly employment on other Federal agency projects financed from ERA acts during the month ending on the 15th of the specified month. Source: U. S. Department of Labor, Bureau of Labor Statistics.

<sup>H</sup> Derived from peak week employment in each state.

TABLE XX.—NUMBER OF PERSONS EMPLOYED ON FEDERAL WORK AND CONSTRUCTION PROJECTS AND NUMBER OF RECIPIENTS OF PUBLIC ASSISTANCE, BY PROGRAM <sup>A</sup>—Continued

CONTINENTAL UNITED STATES

MONTHLY, JANUARY 1933-JUNE 1941

[In thousands]

<sup>1</sup> For January 1933-January 1936 includes recipients assisted from state and local funds only; for subsequent months, from Federal, state, and local funds for programs administered under state plans approved by the Social Security Board and from state and local funds for programs administered under state laws without Federal participation. Excludes recipients of institutional care, hospitalization and/or burial only and, beginning September 1940, recipients of medical care only. Corrected to July 15. Source: Social Security Board.

<sup>2</sup> Partly estimated. Local poor relief cases, for which separate estimates are shown for 1933-35, are included in the general relief totals for subsequent months. Excludes cases receiving hospitalization and/or burial only and, beginning September 1940, cases receiving medical care only. Corrected to July 25. Source: April 1937 to date, Social Security Board.

<sup>3</sup> Estimated number of cases receiving transient relief through state and local emergency relief administrations.

<sup>4</sup> Partly estimated for July-December 1935.

<sup>5</sup> Net number of cash grant payments made to individual cases for subsistence plus number of cases receiving commodities or Surplus Marketing Administration stamps issued by the Farm Security Administration. Ordinarily only one cash grant payment per month is made to a case. Source: Farm Security Administration.

<sup>6</sup> Average weekly employment during the month ending on the 15th of the specified month. Includes employment on projects financed from RFC funds. Partly estimated by WPA for months prior to January 1936. Source: January 1936 to date, U. S. Department of Labor, Bureau of Labor Statistics. (See note b.)

<sup>7</sup> Less than 500 persons.

TABLE XXI.—AMOUNT OF EARNINGS OF PERSONS EMPLOYED ON FEDERAL WORK AND CONSTRUCTION PROJECTS AND PAYMENTS TO RECIPIENTS OF PUBLIC ASSISTANCE, BY PROGRAM A

CONTINENTAL UNITED STATES

MONTHLY, JANUARY 1933-JUNE 1941

[In thousands]

<sup>1</sup> For January 1933, January 1936 represents payments from state and local funds only, for subsequent months, from Federal, state, and local funds for programs administered under state plans approved by the Social Security Board and from state and local funds for programs administered under state laws without Federal participation. Excludes cost of institutional care, hospitalization and burials and, beginning September 1940, cost of medical care. Corrected to July 15. Source: Social Security Board.

<sup>2</sup> Partly estimated. Local poor relief, for which separate estimates are shown for 1933-35, is included in the general relief totals for subsequent months. Excludes cost of hospitalization and burials and, beginning September 1940, cost of medical care. Corrected to July 25. Source: April 1937 to date, Social Security Board.

<sup>3</sup> Partly estimated. Obligations incurred from Federal, state, and local funds for transient relief extended to cases by state and local emergency relief administrations.

<sup>4</sup> Partly estimated for July-December 1945.

<sup>5</sup> Net amount of cash grant payments made to individuals for subsistence plus cost to Farm Security Administration of commodities and Surplus Marketing Administration stamps issued to individuals. Source: Farm Security Administration.

<sup>6</sup> Total earnings shown on pay rolls ending during the month ending on the 15th of the specified month. Includes earnings on RFC projects. Partly estimated by WPA for months prior to January 1936. Source: January 1936 to date, U. S. Department of Labor, Bureau of Labor Statistics.

<sup>7</sup> Less than \$500.

TABLE XXII NUMBER OF PERSONS EMPLOYED ON FEDERAL WORK AND CONSTRUCTION PROJECTS AND NUMBER OF RECIPIENTS OF PUBLIC ASSISTANCE, BY STATE AND BY PROGRAM A

A See notes on Table XX.

B Average enrollment during the month by state from which enrolled.

C Includes employment on projects financed from FWA funds and on other Federal agency projects financed from ERA acts.

D Partly estimated. Does not represent total of state data, cases receiving medical care, hospitalization, and/or burial only excluded.

E Includes estimates for two states for which data are not available.

F Estimated.

G County indigent aid only. It is estimated that, in addition, 28,800 cases were aided by the state relief administration.

H Includes unknown number of cases receiving medical care, hospitalization, and/or burial only.

J State program only; does not include program administered by local officials.

K Includes cases receiving medical care only, number believed by state agency to be insignificant.

L Represents 4,803 cases aided under program administered by state board of public welfare, and 6,711 cases aided by county commissioners' amount of duplication believed to be large.

TABLE XXIII. AMOUNT OF EARNINGS OF PERSONS EMPLOYED ON FEDERAL WORK AND CONSTRUCTION PROJECTS AND PAYMENTS TO RECIPIENTS OF PUBLIC ASSISTANCE, BY STATE AND BY PROGRAM<sup>A</sup>

JUNE 1941

[In thousands]

WORK PROJECTS ADMINISTRATION

MAJOR GENERAL PHILIP B. FLEMING, Acting Commissioner

GEORGE H. FIELD, Deputy Commissioner

SAMUEL L. HABER, Director, Division of Research and Statistics

## PREFACE

The Work Projects Administration, a unit of the Federal Works Agency since July 1, 1939, was established in 1935 with the primary purpose of providing work for the unemployed on useful public projects. The activities of the WPA in achieving this objective during the fiscal year ending June 30, 1942, are reviewed in this report. A final report covering the entire eight-year period of operation of the WPA program is to be published at a later date. For this reason, the report for the fiscal year 1942 is considerably shorter than previous annual reports.

The report contains special sections on the war activities and the vocational training activities carried on by the WPA. The remainder of the report is devoted to three sections that bring up to date previous statements on employment, expenditures, and accomplishments.

## TABLE OF CONTENTS

|                                     | Page |

# REVIEW OF THE WPA PROGRAM

**T**HE fiscal year 1942 for the Work Projects Administration was a period of further adjustment to the Nation's emergency defense program which, after Pearl Harbor, became the Nation's war program. Wherever possible the labor of workers on the WPA rolls was utilized for the construction of facilities and the provision of services which would aid the war effort. A program was set up for the training of workers in the manual occupations needed in war industries. More than a third of the WPA program was devoted to defense and war activities during the fiscal year 1942. The remainder of the program continued the construction and improvement of public facilities and the provision of various services to communities.

## WPA War Work

The WPA has been doing work for the military and naval authorities since 1935. WPA projects at military and naval reservations in prewar years helped greatly in the rehabilitation of utilities and other physical equipment of our armed forces. When the national emergency was declared in the summer of 1940, it was recognized that many of the WPA projects undertaken for civilian use were now of military value. A large number of roads, bridges, and airports constructed in peacetime now became an integral part of the Nation's defenses.

WPA work for the armed forces was increased and speeded up in the fiscal year 1942. Project workers constructed and improved barracks, mess halls, garages, warehouses, training fields,

rifle ranges, administration buildings, hospitals and infirmaries, roads, water and sewer lines, and other structures and utilities at military and naval establishments.

Service projects provided leadership at recreation centers for the use of members of the armed forces and war industry workers. Other WPA service project work included the making of maps, posters, and other visual educational aids; the tabulation of weather data; the giving of assistance to libraries, aid to health agencies in a program of venereal disease control, and other kinds of clerical assistance to agencies overburdened with war activities.

Other WPA work directly useful to the war program included civil airport construction and improvement, construction and improvement of access roads and utilities, and health and welfare services in war industry centers.

Under Congressional legislation enacted in June 1940 and continued in subsequent years, projects of the types described above were eligible for certification by the Secretary of War or the Secretary of the Navy as of importance to the war effort. Such certification was necessary in order to secure the benefit of priority in obtaining materials, and was the basis of exemption from restrictions applying generally to WPA hours and wages.

At the beginning of the fiscal year 1942, 34 percent of all WPA workers were engaged in war work; by the end of the fiscal year the percentage of workers on war projects had risen to about 41 percent. The number of workers on war projects in mid-June 1942 was 287,000, of

whom 205,000 were employed on certified war projects. Of the 287,000 WPA war workers, more than 185,000 were doing construction work, and nearly 64,000 were on service projects, while 38,000 were taking vocational training courses in preparation for private employment in the war industries.

The fiscal year 1942 was the seventh in WPA history. Over this whole seven-year period, more than 25,000 buildings had been constructed, enlarged, or improved for the use of the armed forces. During the same period, about 800 airports and more than 4,000 airport buildings had been built, enlarged, or improved.

A special feature of WPA war work in the fiscal year 1942 was scrap collection, carried on at the request of the War Production Board. Between October 1941 and the end of June 1942, 44,000 tons of steel rail had been removed from city streets by WPA workers. In an agricultural and urban scrap collection campaign, between the latter part of April and the end of June 1942, WPA workers collected more than 27,000 tons of scrap metal and about 2,000 tons of rubber.

### Project Activities and Accomplishments

The general range of project activities in this fiscal year was nearly as broad as in former years, despite the gradual shift in emphasis to projects directly or indirectly aiding the war effort. About three-fifths of all WPA project expenditures in the fiscal year 1942 were made on work which, while often indirectly aiding the Nation's war effort, was undertaken primarily for the civilian population.

It is, of course, impossible to make a distinct cleavage between civilian benefits and benefits to the war program. Roads built for civilian use in nonstrategic areas may at any moment become of military importance. The practical distinction is that some roads and not others received certification as of importance to national defense. Noncertified roads, chiefly for the benefit of rural districts, continued to be built by WPA workers in the fiscal year 1942, though less extensively than before.

Airport work was placed in the category of certified war projects. Construction of public buildings was largely but not entirely in mili-

tary or war industry areas. The construction and improvement of hospitals had a special wartime value in any area. Noncertified building construction, a diminishing category, included new school buildings erected to replace old and unsafe structures. Water treatment and sewage disposal plants were constructed, and water mains and sewer lines laid. General park work was scarcely carried on at all, but playgrounds were constructed in many localities. In general, large construction for recreational purposes was discontinued. Malaria control work was undertaken especially for the protection of military encampments. Conservation work, such as tree planting and work at fish hatcheries, continued on a smaller scale. Employment on the WPA work program was being reduced, and it was reduced most rapidly in the field of construction for civilian use and benefit.

The service part of the WPA program was to a considerable extent turned into war work; and here again, the distinction between work of importance for war purposes and other work is sometimes merely a formal distinction between certified and noncertified projects. The nursery school program was expanded to include the children of mothers working in war plants and of men in the armed forces. Adult educational work was concentrated particularly upon literacy and naturalization classes, and on vocational training. Library extension work was in large part for the benefit of the armed services. Public health activities—clinics and venereal disease control especially—were expanded in military and war production areas. School lunches were continued, with increased local support, in all parts of the country. Work on sewing projects included the reconditioning of army clothing and equipment. A considerable part of the work performed on research and records projects and art and music projects was related to the war emergency. WPA service projects in general, however, continued to serve civilian needs of communities.

The figures showing the work performed by the WPA in seven years are impressive. About 664,000 miles of highways, roads, and streets were constructed and improved. A large portion of all airport work throughout the Nation was done by the WPA. Waterfront

improvements include more than 700 docks, wharves, and piers. About 5,700 new school buildings have been constructed, and more than 33,000 others enlarged or improved. More than 200 new hospitals were built and about 2,000 improved or reconstructed. WPA workers built 140 new libraries and enlarged or reconditioned 900 others. The construction and improvement of recreational facilities included more than 8,500 new recreational buildings, 3,000 new athletic fields, and more than 8,100 parks. WPA workers built nearly 950 sewage treatment plants and laid nearly 16,000 miles of water main and distribution lines. More than 15,000 miles of drainage ditches were dug in malarial areas. Under the WPA service program workers repaired or renovated about 94,000,000 books, served more than 1,000,000,000 school lunches, and made 375,000,000 garments and 111,000,000 other articles in sewing rooms. Educational and other cultural services have been extended to large numbers of children and adults through the projects on this program.

### Vocational Training

During the defense and war period, several new training programs were set up to prepare WPA workers for private wartime jobs.

A national project for the training of workers in the occupational skills required in the defense industries was carried on under the sponsorship of the War Production Board and the cosponsorship of the United States Office of Education. The WPA selected the workers to be trained, and paid them WPA wages during a course of training, which in different schools varied from four to twelve weeks. The instructors and supervisors were furnished by the United States Office of Education. Classroom instruction was supplemented by shop practice. About 32,000 trainees were enrolled in these classes on June 16, 1942.

Small machine shops, not yet drawn into war production, were used as auxiliary shops in this training program; and more than 1,400 trainees were in auxiliary shops at the end of the fiscal year.

In addition, there was an in-plant training program, in which selected WPA workers were

paid learners' wages by the WPA during a four weeks' training period in war production plants; if their work was satisfactory, they were then put on the plant pay rolls. On June 16, 1942, more than 1,500 WPA workers were taking in-plant training.

Women as well as men were trained for war industry work. Many women formerly employed on sewing projects were taught to operate small bench machines; other women were trained in work ranging from light aircraft riveting to blueprint reading. About 4,900 women were receiving training on vocational projects at the end of the fiscal year.

A nation-wide project for the training of WPA workers as airport servicemen was operated under the sponsorship of the Civil Aeronautics Administration and the United States Office of Education. The airports used as training stations were selected by the CAA, the instructors were furnished by the United States Office of Education, and the trainees were selected, assigned, and paid wages by the WPA during a training period of 90 days. At the end of the fiscal year, more than 500 WPA workers were receiving such training. Approximately 35,000 persons were in training under all the above wartime training programs in June 1942.

In addition, the WPA conducted two other training programs not directly related to the war program. The WPA household workers training program was reorganized so as to train only WPA workers, who were paid for 12 weeks while being trained. Other WPA workers were trained for periods of three to six months for nonprofessional duties in hospitals and institutions, and were paid WPA wages during the training period. More than 1,600 persons were in training in mid-June 1942 under these two programs.

Vocational courses, which include business English, arithmetic, typing and stenography, are a part of the WPA's adult education program intended to serve the public in general. In January 1942, more than 55,000 persons were enrolled in these vocational courses.

### Employment

The average employment on WPA projects for the fiscal year 1942 was 971,000, the lowest

in WPA history. This was 68 percent less than the average employment of 3,014,000 in the peak fiscal year of 1939. WPA employment for the month of June 1942 averaged only 698,000 as compared with 1,411,000 in June 1941, a decline of 51 percent.

The drastic reduction in WPA employment in recent years has been due only in part to increasing employment opportunities for WPA workers; large reductions in project operations were necessary in order to keep within curtailed WPA appropriations made for the years subsequent to 1939.

Thus, while many WPA workers left the program voluntarily in order to take private jobs, there were a considerable number of separations made necessary by the decreased funds available. During the fiscal year 1941, the monthly volume of separations averaged 14 percent of monthly employment, and 45 percent of the average monthly separations were voluntary. In the fiscal year 1942, monthly separations averaged 16 percent of employment, and 56 percent of the separations were voluntary.

A significant development during the fiscal year 1942 was the relatively larger importance of service and training projects in providing employment on the WPA program. Construction projects still continued to be the major activity of the WPA, although this type of project employed only 58 percent of all WPA workers in June 1942 as against 68 percent in June 1941.

Defense and war projects were given increasing emphasis on the WPA program during the fiscal year 1942. The proportion of all WPA workers employed on such projects rose from 34 percent in June 1941 to 41 percent in June 1942. Since many defense and war projects were exempted from the standard WPA regulations concerning maximum working hours and earnings, a rise in employment on such projects resulted in a more than proportionate rise in hours of work and earnings. At the end of June 1942, about 20 percent of the WPA workers were exempted from the standard limitations of hours and earnings, and practically all of them were employed on certified war projects.

During the fiscal year 1942, WPA project employees worked 1,494,000,000 hours and

earned \$721,100,000 on projects operated by the WPA. Because of the fewer workers employed, the total hours were 40 percent less than in the previous fiscal year, and the total earnings were 36 percent less.

### Financing the Program

The fiscal year 1942 was marked by the smallest total annual expenditure of WPA funds in the history of the program. Expenditures were 33 percent below those of the previous fiscal year, and 60 percent below those of the peak fiscal year of 1939. Total expenditures by the WPA for project operations in the fiscal year 1942 were \$844,498,000; in addition, \$34,717,000 was expended for administration. WPA projects operated by other Federal agencies, but financed by allocating WPA funds, brought total WPA expenditures up to \$887,648,000.

The sponsors' contributions to projects operated by the WPA for the fiscal year were \$381,150,000, or 31 percent of the total funds expended. In the first year of WPA operations the sponsors' contribution was only 10 percent of total funds expended. The statutory requirement is now an average of 25 percent sponsors' contributions in each state. This requirement does not apply to certified war projects, but during the fiscal year 1942 the sponsors contributed nearly 23 percent of the total cost of these war projects.

Of the total WPA project expenditures for the fiscal year 1942, 86 percent was for labor costs (including the wages of supervisory project personnel), and 14 percent for nonlabor costs. In 1941, WPA nonlabor costs had been 10 percent of all project expenditures; the rise in 1942 was due to the increased proportion of war projects, chiefly construction work requiring higher outlays for materials.

### General Summary

The Work Projects Administration has left lasting evidences of its operations in all parts of the country. Work projects set up to provide useful public work for the unemployed have added very greatly to the physical assets of local communities, and have established a

pattern of public services that promises to endure far beyond the term of this emergency program. The ability of needy unemployed workers to make valuable contributions to community improvement and welfare has been demonstrated conclusively. A practical method of Federal-local cooperation has been established for future use. Many millions of unemployed workers were returned to employment in

private industry with their skills largely maintained and often increased; and in the meantime the self-respect of those millions of workers and their families has been preserved. As the Nation entered into the present world struggle, it was indebted to the work program of the WPA not only for its substantial assistance to the war effort, but also for its contribution to the morale of a large portion of our population.

# WPA WAR ACTIVITIES

**M**UCH of the work done by the Work Projects Administration through the whole period since the start of the program in 1935 has proved of great value to the national defense program and the war effort. A large proportion of the airport construction work done in the United States since 1935 has been accomplished through WPA projects. The work on highways and roads has expedited heavy wartime traffic. The reconditioning of buildings at military and naval establishments has helped to provide housing and facilities for the Nation's rapidly expanding armed forces.

Before the entry of the United States into the war, WPA operations were already well-integrated with the national defense program. The WPA, through an experienced administrative and technical organization extending into every state and most counties and communities, was able to put into immediate operation projects designated as important for defense purposes. By December 1941 the WPA was prepared to make its full contribution to the war effort.

Although the emphasis of the WPA program was shifted to meet wartime needs, the types of work performed remained in general the same as in peacetime. Construction projects, during the fiscal year 1942, continued to make up the major part of the program; but within this category certain types of work increased in relative importance. Work on airports was emphasized. Highway, street, and road projects were devoted to an increasing extent to the improvement of strategic highways or to the building of access roads to military and naval establishments and to war production centers. Service projects were

reorganized so as to contribute more directly to the needs of the armed forces, of state and local defense councils, and of war industry areas.

## Provisions Facilitating WPA Defense and War Work

The ERA Act for the fiscal year 1942, like the act for the previous year, included provisions which facilitated the participation of the WPA in the national defense and war programs. Under these provisions, projects certified by the Secretary of War or the Secretary of the Navy as important for military or naval purposes might be exempted by the Commissioner of Work Projects from certain statutory limitations usually applicable to the operation of WPA projects.

The general provisions from which certified war projects could be exempted were: the provision that not more than three-fourths of the total cost of non-Federal projects approved after January 1, 1940, in any state, might be paid from Federal funds; the provision prohibiting the expenditure of WPA funds for the construction of any building costing more than \$100,000 in Federal funds; the provisions concerning maximum hours of work and the schedule of monthly earnings (when such exemption was necessary to expedite project operations); and the provision limiting WPA contributions to the nonlabor costs of projects to \$6 per month per worker.

Certified defense and war projects not only had the benefit of these exemptions, but were

given priority in operation over all other projects. State WPA offices were directed by the Commissioner of Work Projects to start work on such projects as soon as possible after approval and to complete operations as soon as available resources would permit.

Special administrative orders, issued by the Commissioner to WPA field offices, provided definite instructions for submitting requests for exemptions and indicated the circumstances under which they would be granted. Only after rigid inspection of such requests were any of the usual requirements of project operation waived.

The Secretary of War and the Secretary of the Navy listed the following specific categories of projects as of importance to the defense program and the war effort, and hence as eligible for certification:

Projects sponsored by the War and Navy Departments or their duly authorized officers.

Construction and improvement work on landing field facilities at airports.

Projects for the construction or improvement of roads, streets, bridges, and highways which form a part of the national strategic highway network or which provide access to military or naval establishments or industrial plants engaged in war work.

Public health projects, approved by the United States Public Health Service, for work in the vicinity of army and navy establishments or in areas where work is being performed for the War or Navy Departments.

Projects for naval training facilities.

Projects for the improvement of airways.

Projects for the construction or improvement of Reserve Officer Training Corps or National Guard facilities (exclusive of buildings requiring more than \$100,000 in WPA funds).

Projects sponsored by the Federal Communications Commission for work in connection with radio monitoring stations.

The construction, improvement, and operation of public facilities and utilities in locations where needs are substantially expanded as a result of defense and war activities.

Projects in these categories accounted for most of the WPA's defense and war activities during the fiscal year 1942. Certain individual projects outside these categories, if they were found to be of outstanding importance for military or naval purposes, were also certified.

Numerous other projects of importance to the defense program and to the war effort were undertaken without certification and without necessity for exemptions. Many of the projects in this noncertified group have assisted the war efforts of nonmilitary agencies.

## Employment on War Projects

The percentage of WPA employment devoted to war projects increased from 34 percent at the beginning of the fiscal year to approximately 41 percent by June 1942. At the same time the numbers of workers employed on these projects decreased, as did employment on the WPA program as a whole. The decrease in employment on war projects was from an average of 358,000 persons in July 1941 to an average of 285,000 persons in June 1942. The rate of decrease in employment was much slower on war projects than for the program as a whole, since the greatest curtailment was made in work not contributing directly to the war effort.

<sup>a</sup> Financed by allocation of WPA funds.

In the various states, the percentage of employment on war projects varied (in June 1942) from 15 to 95 percent. In the District of Columbia 95 percent of all WPA workers were engaged in war work; in Arkansas and Iowa only 15 percent were so employed. In Puerto Rico and the Virgin Islands the percentages were 84 and 86 percent, respectively. In Arizona, Connecticut, Florida, and Maryland more than 70 percent of WPA employment was on war projects.

Certified war projects provided employment for 205,000 of the war project workers on June 16, 1942, and other war projects employed nearly 82,000. Many of the workers on certified war projects were exempted from the standard limitations on hours of work and total monthly earnings, in accordance with the provisions of the 1942 ERA Act.

The war activities of the WPA program did not vary greatly from its general activities in the period previous to the war, although greater emphasis was given to certain types of projects. As of June 16, 1942, construction projects employed more than 185,000 war project workers, service projects nearly 64,000, and vocational training projects 38,000.

Of war project workers engaged in construction work, the largest number, about 68,000, were employed on highways and roads for the use of the armed forces. Projects at civil,

<sup>a</sup> Projects which may be exempted from legislative provisions regarding cost of buildings, hours of work, earnings, nonlabor costs, or sponsors' funds.

military, and naval airports provided employment for nearly 35,000 workers. The construction and rehabilitation of buildings at military and naval establishments engaged 34,000 WPA workers. Projects providing utilities, such as water supply and sewer systems, provided jobs for 15,000 workers. Conservation and sanitation work, the development of recreational facilities, and other types of construction work employed the remainder of workers on war projects in the construction field.

WPA services to the armed forces and war industry areas were greatly expanded in the fiscal year 1942. Service programs were employing almost 64,000 workers on June 16, 1942 on projects directly related to the war effort as compared to 33,000 on June 25, 1941. Recreational leaders, librarians, musicians, artists, research and clerical assistants, health assistants, nursery school teachers, seamstresses, and other types of workers were employed on these projects.

In addition, at the end of June 1942, about 38,000 workers were being trained for jobs in war production industries. (See page 14 of this report for a detailed description of vocational training activities.)

PERCENTAGE OF WPA WORKERS EMPLOYED ON WAR PROJECTS\*

JULY 1941 - JUNE 1942

\* Based on average monthly employment on war projects and all projects financed with WPA funds.

WPA 5148

## Project Activities and Accomplishments

The contributions to the Nation's defense and war programs resulting from WPA projects are of widely varying kinds. Not all of these can be expressed in numerical terms. Much of the work performed has provided facilities for the Army and Navy and other war agencies. Some of the WPA accomplishments on war construction projects are summarized in Table 3 and are described in the paragraphs that follow.<sup>1</sup>

### Facilities at Military and Naval Establishments

Much of the WPA's construction work was done at military and naval establishments in various parts of the country. Barracks, hospitals, mess halls, armories, and other buildings have been constructed or reconditioned at some centers. Other construction projects have been devoted to training facilities, such as firing zones, target ranges, and parachute landing fields.

During the seven-year period ending June 30, 1942, WPA workers constructed 4,500 buildings for the armed forces and reconstructed or improved over 20,500 others. Among the new structures were 750 barracks, about 700 dining halls and mess halls, 600 storage buildings, 375 garages, and 325 armories. More than 100 hospitals were built or enlarged and improvements were made to about 450 others.

Projects conducted for the Army included the construction and renovation of a large number of buildings at one of the chief army training centers in the south. More than 800 WPA workers were employed each month from August 1941 to May 1942 to do this work. Among the buildings completed more than a month ahead of schedule, were a large mess hall with a capacity of 1,800 men, several infirmaries, a warehouse, and many barracks.

Electric power, incinerator, heating, pumping, sewage treatment, and water treatment plants were also constructed at military and naval reservations. About 175 such plants were built and additions or improvements were made to more than 200 others.

At an east coast naval establishment, WPA workers constructed a new salt water circula-

ting system running from the water front to the central power plant. Concrete pipe, live and a half feet in diameter and weighing about three tons, was designed especially for this system. At the same base, hundreds of feet of overhead steam line for heating barracks, several miles of fiber conduit for electrical facilities, and thousands of feet of water main and storm and sanitary sewer lines were also installed.

In cooperation with state departments of health, the WPA has engaged in malaria control work in the neighborhood of many camps. Swamps and ponds were drained, drainage

<sup>1</sup> Detail has been omitted in order to avoid disclosure of military information.

<sup>A</sup> Includes surfacing.

ditches dug and sometimes riprapped, and streambeds cleared to facilitate the runoff of water. Near one camp in the south, 135,000 feet of drainage canal was built through densely wooded swamp land.

Many other types of construction work were performed by the WPA for the armed forces. WPA workers constructed pill boxes and gun emplacements, sodded ammunition dumps, cleared and laid out firing zones, built target ranges. Barbed wire fences, alarm systems, firebomb protection units, and sandbag barricades were built for the protection of military reservations and vital industrial plants. Most of this work has been done since December 1941.

### Work on Airports

The war emergency emphasized the need for extensive airport facilities. The effective functioning of the air forces is dependent to a considerable extent on an adequate network of airports throughout the country. Both the peacetime and wartime work of the WPA in constructing and improving civil and military airports is therefore important to the war program.

In the seven years ending June 30, 1942, 285 airplane landing fields were built and nearly twice that number improved or enlarged. In the same period WPA workers built about 775 miles of new runways, and completed taxi strips, aprons, and turning circles totaling millions of square yards in area. Nearly 1,700 miles of drainage ditch were dug and pipes installed. Construction or renovation of airport buildings by WPA workers has contributed much to the efficiency of military and civil air transportation. More than 1,100 airport buildings, including hangars, administration and terminal buildings, and maintenance shops, had been completed by the end of June 1942, and over 2,900 such buildings had been renovated or enlarged.

WPA work in the development of air bases for the armed forces includes a project for enlarging and improving the landing field of a middle western Army Air Corps training center. The work involved the excavating, filling, and grading of the field; the construction of three large check-dams to aid in controlling runoff

of rain water from the reclaimed section; the digging of open drainage and utility ditches; and the installation of miles of drainage pipe. At the end of the fiscal year 1942, grading was nearly completed on two of the longest runways in the country. In addition, WPA workers built taxi strips, aprons, and parking areas; installed storm and sanitary sewers and water mains; constructed roads, sidewalks, curbs, gutters, and a concrete retaining wall.

WPA war projects included work on bases for lighter-than-air craft and seaplanes for the Navy air services. At the end of the fiscal year, construction of seaplane facilities was well under way in one of the inlets of the Pacific Ocean. This work involved driving foundation piling for retaining walls, building a coffer dam and ramp of treated timber, and the construction of aprons. On the Atlantic Coast, at the end of June 1942, WPA workers had half completed preparation of the site for a base for lighter-than-air craft. Several hundred acres of land were cleared and six miles of barbed wire fence erected. At another large naval air base, WPA workers were engaged in the construction of aprons and runways, hangar renovation, grading, and other improvements not directly connected with the landing field, such as the installation of water and electric power lines.

WPA projects for the construction and improvement of civil airports, which had been carried on since the beginning of the WPA program, assumed greater importance after December 1941. One of these projects, which was rapidly approaching completion at the end of the fiscal year 1942, was the construction of a new airport for a southern city. WPA workers developed the 800-acre landing area; built an apron and about a third of a mile of roadway; installed sanitary and storm sewers, septic tanks, and water supply lines; and put up 30,000 feet of 4-foot woven wire fence.

### Access Roads, Strategic Highways, and Other Transportation Facilities

Projects for the construction of highways, streets, and roads have always occupied a major place in the WPA program. By June 30, 1942, the WPA had built nearly 644,000 miles

of highways, roads, and streets including many that gave access to airports, military and naval reservations, and war production centers.

An access road to a Marine Corps base was an important unit of highway work completed during the fiscal year 1942. WPA workers did the excavating, grading, and drainage work necessary for the relocation of several miles of road, and improved the remainder. A large number of culverts were installed, and the road was paved with a high-type asphaltic surface.

An all-timber overpass to carry traffic over a heavily traveled highway on the west coast was completed by WPA workers during fiscal year 1942. The 800-foot viaduct has a roadway nearly 25 feet wide and is of standard pile-trestle construction with a central bridge section designed to provide clearance for any type of load. Because of the continuous stream of heavy military and civilian traffic, this section was erected parallel to the highway and pivoted into position.

### Salvage Activities

With the increased need for scrap metal for war purposes, the WPA expanded its work of removal of abandoned street-car rails, where arrangements could be made for shipment to disposal points designated by the War Production Board. These activities were certified by the War Department as important for military purposes.

WPA rail removal activities were further expanded under the nation-wide scrap collection project sponsored by the WPB. These activities were limited to instances where title had been acquired to the rails and where no street repair work was to be done other than that incidental to the removal of the rails. Arrangements had been made with the Metals Reserve Company whereby it could acquire title on behalf of the WPB, and thus speed up rail removal negotiations. Between October 1941 and the end of June 1942, 44,000 tons of rails were recovered on this project in 34 states. In the month of June alone, nearly 13,800 tons were recovered.

The WPA took part also in the collection of scrap from agricultural and urban sources, where-

ever the WPB indicated that its assistance was needed. More than 27,000 tons of scrap metal and about 2,000 tons of rubber were collected by WPA workers between the latter part of April and the end of June, 1942.

In cooperation with the WPB and the Department of Agriculture, WPA workers made a survey for a directory of automobile "graveyards." Auto salvage inspectors worked with WPB state representatives to keep scrap moving from the auto "graveyards" to designated points. The WPA also cooperated with regional offices of the WPB's special salvage projects section in the development of projects for such work as the demolition of bridges and the salvaging of steel rails.

### Other WPA War Work

Many types of defense and war work other than in the construction field were performed by the WPA. Most of the nonconstruction projects were operated under the service program. Through these projects many facilities and services have been extended to the armed forces, and to communities whose population has been greatly expanded by war production.

In the latter part of the fiscal year 1942, the WPA service program was reorganized to meet wartime needs. Projects not contributing to the war effort were dropped. WPA workers on education, research and records, child protection, health, sewing, recreation, music, and art projects were able to render valuable services to the armed forces and to war industry centers.

Citizenship classes prepared foreign-born adults for naturalization. Literacy classes giving elementary instruction to deferred selective service registrants who had received little formal education enabled many of them to pass the Army tests. Spanish classes were conducted for members of the armed forces. Two textbooks were prepared by the WPA for use in these classes. In many areas, at the request of defense agencies, the WPA supplied teachers for first-aid classes. Bookmobile and library services were extended to military reservations, and war information centers

were developed in conjunction with local library services.

WPA workers employed on research and survey projects collected vital weather statistics and tabulated millions of observations in order to make weather and climatic information readily available to the armed forces. They also gave clerical assistance in housing registration offices, in vital statistics offices engaged in locating birth certificates for war workers, and in other offices overburdened with war activities.

Many special types of welfare and health services were provided for members of the armed forces and for war workers in industrial areas. The WPA nursery school program was expanded to care for the children of men in the armed forces and of mothers employed as industrial workers. Professional and nonprofessional workers assisted state and local health departments, through training and service projects, to meet greatly increased demands for health services. In cooperation with the United States Public Health Service, a program for the treatment and control of venereal diseases was operated in many strategic areas. At the request of the Army, the facilities of WPA sewing projects were utilized in the reclamation of army clothing and equipage.

Recreation services were provided to hundreds of communities throughout the country. Programs of recreation were inaugurated at most army posts and encampments. Recreation centers were opened in cities and small communities in areas where the men of the armed forces congregate when on leave. In these centers, which the WPA frequently furnished and equipped, WPA workers were employed as recreation leaders. A great variety of entertainment was offered—concerts, indoor games of all kinds, dramatics, and reading. Opportunities were given to those interested in hobbies such as photography to use the facilities of the centers.

The WPA music projects provided similar services. Bands and choral groups were organized at the army camps. Concerts were given at the camps and in the communities near by, and at war industry plants for lunch-hour entertainment.

During the fiscal year 1942, the WPA workers on art projects performed a variety of services

for the Army and Navy and other war agencies at their request. Diagrammatic charts of airplane motors; topographical, technical, and terrain maps; working models of bridges, airports, guns, bombs, tanks, were made for use in training members of the armed forces. Posters were made to promote recruiting, to boost sales of war bonds and stamps, to give information in public campaigns to combat disease, and to arouse interest in air raid precautions. WPA workers on art projects assisted in experiments in the camouflage and concealment of military and industrial installations. The talents of WPA artists were used in decorating the walls of recreation centers, officers' quarters, mess halls, and other camp buildings. Handicraft workers made furniture, draperies, curtains, fountains, lighting fixtures, and other articles of interior decoration for various buildings in military and naval establishments, and for recreation centers. WPA craftsmen also produced for the use of the Army and the Navy portable medicine cabinets, code-practicing tables, photo-storage cabinets, and portable altars for chaplains.

### Expenditures for War Projects

War projects accounted for about two-fifths (39.4 percent) of all WPA expenditures during the fiscal year ending June 30, 1942. The total outlay of WPA funds for these projects amounted to \$335,335,000. Of this amount, \$332,471,000 was spent on war projects operated directly by the WPA, and \$2,864,000 on war projects undertaken by other Federal agencies with funds allotted by the WPA. In addition to WPA funds expended, the sponsors provided more than \$121,192,000, making a total of \$456,527,000 expended on WPA war projects during the fiscal year of 1942.

WPA funds expended during this fiscal year on war projects exceeded by about \$10,000,000 the amount expended for similar purposes during the previous year, although the WPA program as a whole had been considerably curtailed, and total WPA expenditures were 33 percent less in the fiscal year 1942 than in 1941.

Construction work accounted for 82 percent (\$370,876,000) of WPA and sponsors' funds expended on war projects operated by the WPA.

TABLE 4.—AMOUNT OF WPA AND SPONSORS' FUNDS EXPENDED ON WAR PROJECTS SUBJECT TO LEGISLATIVE EXEMPTIONS AND ON OTHER PROJECTS DESIGNATED AS OF IMPORTANCE TO THE WAR EFFORT OPERATED BY WPA, BY MAJOR TYPE OF PROJECT

YEAR ENDING JUNE 30, 1942

| Type of project                               | Total         | WPA funds     | Sponsors' funds |
|-----------------------------------------------|---------------|---------------|-----------------|
| Total                                         | \$453,663,283 | \$332,470,804 | \$121,192,389   |
| Division of Operations                        | 370,875,544   | 261,339,353   | 109,536,191     |
| Airports and airways                          | 102,415,437   | 76,889,010    | 25,526,427      |
| Buildings                                     | 64,777,571    | 47,418,381    | 17,359,190      |
| Conservation                                  | 3,341,044     | 2,426,550     | 1,154,494       |
| Engineering surveys                           | 3,349,926     | 2,686,724     | 663,202         |
| Highway, roads, and streets                   | 132,600,337   | 87,037,491    | 45,562,846      |
| Recreational facilities (excluding buildings) | 893,388       | 545,390       | 347,998         |
| Sanitation                                    | 3,680,773     | 3,045,716     | 635,057         |
| Water and sewer systems and other utilities   | 35,208,828    | 23,541,104    | 11,667,724      |
| Other                                         | 24,368,240    | 17,748,987    | 6,619,253       |
| Service Division                              | 54,127,436    | 43,962,530    | 10,164,906      |
| Public activities                             | 21,466,219    | 17,482,433    | 3,983,786       |
| Research and records                          | 18,852,768    | 16,089,716    | 2,763,052       |
| Welfare                                       | 13,808,449    | 10,390,381    | 3,418,068       |
| Division of Training and Reemployment         | 28,660,303    | 27,169,011    | 1,491,292       |

work on water and sewer systems and other utilities at military and naval centers and in areas where work was being performed for the armed forces accounted for about 8 percent of the total.

Airport and airway project expenditures amounted to \$102,415,000, or 23 percent of the funds spent for war projects in fiscal year 1942. This sum exceeded by nearly \$33,000,000, or 47 percent, the amount expended for airport work in the previous year. This increased outlay for airport work, in the face of the decline in expenditures for the WPA program as a whole, reflects the importance of airport construction to the war effort.

Most of the expenditures of WPA and sponsors' funds for nonconstruction war projects were for the various service activities carried on by the WPA already described. About \$54,127,000, or 12 percent of WPA and sponsors' funds expended on war projects, was spent for service projects, including work in the fields of health, recreation, education, public records, and research.

The remainder of war project expenditures was for national defense vocational training. For the training of WPA workers, chiefly for manual occupations in war industries, approximately \$28,660,000 was spent during the fiscal year 1942.

The largest portion, \$132,600,000, or 29 percent of the total, was spent for the construction or improvement of highways, streets, and roads used extensively for war purposes. Expenditures for the construction and reconditioning of buildings at military and naval posts, armories, and other buildings for the use of war agencies represented 14 percent. Funds expended for

# TRAINING WPA WORKERS FOR JOBS

A FUNDAMENTAL policy of the Work Projects Administration has always been that project workers should be given every encouragement and assistance in securing jobs in private industry.<sup>1</sup> In keeping with this policy, all workers are required to maintain active registration with public employment offices. As far as possible, workers are assigned to projects which will enable them to retain their occupational skills. When this is not possible, workers are sometimes assigned to projects where they can learn new skills. Some workers are given the opportunity to study methods of supervision in order to qualify for jobs as foremen. Vocational training classes have been provided under the adult education program in which thousands of persons interested in improving their present skills or learning new ones have enrolled. Projects have been set up which prepared large numbers of interested persons for jobs in the field of household service.

When the demand for skilled and semiskilled workers in private industry rose sharply with the expansion of the national defense program in 1940, the WPA enlarged its activities in the field of vocational training. A new program was initiated for the training of workers in the occupational skills required by defense industries. Other projects were set up for the training of airport servicemen and nonprofessional workers for hospitals. Since July 1940 about 265,000 workers have received training on these projects.

The vocational training activities of the WPA are a part of a broad national training program set up to meet the needs of war industries. The United States Office of Education (also cosponsor of certain WPA training projects) the National Youth Administration, the Civil Aeronautics Administration, and the Department of Labor—all have greatly expanded their vocational training work in response to war production needs.

## Training for War Work

The WPA initiated its program of vocational training shortly after the Second Deficiency Appropriation Act, 1940, authorized the training of workers for manual occupations in defense industries.<sup>2</sup> A nation-wide vocational training project was set up under the sponsorship of the Advisory Commission to the Council of National Defense and the cosponsorship of the United States Office of Education.<sup>3</sup> The project offers refresher and preemployment courses for occupations needed in war industries. All enrollees must be registered with public employment offices.

The WPA selects the workers to be trained, assigns them to the vocational training project, and pays them WPA wages while they are enrolled. In instances where it is necessary to send WPA workers into other sections of the state for their training, transportation is pro-

<sup>1</sup> Workers voluntarily left the WPA rolls each month, most of them to take jobs in private industry, at the rate of between 3 and 6 percent in fiscal year 1939, 3 and 7 percent in 1940; 5 and 9 percent in 1941, and 5 and 13 percent in 1942.

<sup>2</sup> The Second Deficiency Appropriation Act, 1940, was approved June 27, 1940. ERA acts of 1941 and 1942 provided for the continuance of this project.

<sup>3</sup> The War Production Board assumed the sponsorship formerly held by the Advisory Commission to the Council of National Defense.

vided and some allowance is made for the additional expenses incurred by the workers and their families. The United States Office of Education, through its state and local offices, provides the instructors, supervisors, and training superintendents as well as the personnel required for the maintenance of buildings and facilities. This sponsor also provides the necessary light, heat, and power. State and local advisory committees under the direction of the United States Office of Education determine the methods and types of training to be given and the numbers and kinds of workers to be trained through the project.

WPA trainees are certified workers selected for training on the basis of their past employment and WPA employment records, and their aptitude for learning new skills. Vocational interests in woodworking, model building, or the building and repair of electrical radio equipment are also considered in the selection of trainees. Aptitude tests are sometimes used in determining the occupational training to be given. Information as to the work habits, attitudes, and other qualifications of prospective trainees is obtained from WPA project supervisors.

The largest number of trainees has been in machine shop classes; more than a third were enrolled in these classes on June 16, 1942. (See Table 5 below.) These workers learn techniques required in the construction and assembly of engines for aircraft and ships, and in

the manufacture of guns, tanks, and other military and naval equipment.

About one-third of the trainees enrolled as of June 16, 1942, were preparing for occupations in the metal trades. Classes in welding, sheet-metal work, and riveting train workers necessary in the production of aircraft, ships, tanks, trucks, scout cars, and other mechanized equipment. Foundry and forge work essential in these and other fields is also taught. Less than one-fifth of the trainees were enrolled in the classes in preparation for servicing automobiles, airplanes, radios, and electrical equipment. About a third of the remainder were learning the techniques of ship and boat building and repair; others attended classes in which woodworking, pattern making, and drafting were taught.

The courses of study given are determined by local needs and facilities, and by existing and anticipated needs elsewhere for workers in occupations essential to the war effort. In areas where aircraft production predominates, the vocational school training is devoted almost entirely to aviation services—woodwork, welding, and sheet-metal work. Where steel production predominates, WPA trainees are given courses in machine tool work and in electric and acetylene welding. In shipyard regions, workers are trained as marine blacksmiths, coppersmiths, electricians, and as ship welders, ship riggers, and ship fitters.

Training schools vary in details of procedure but in general they operate at hours when shops are not in use by regular school programs and when instructors are available. Trainees frequently attend classes from early evening until early morning. Instructors have usually been day-school teachers or experienced industrial workers. The theoretical information of the classroom is supplemented by practice in the shop, and frequent tests are made of trainees' skills and knowledge.

The training period varies by schools, but usually extends from four to twelve weeks, although trainees may leave when jobs become available and they feel sufficiently proficient to begin work. Those enrolled in refresher courses frequently find that two weeks of training will bring back old skills. In order to give more intensive training and to hasten the return of workers to war industries, a work week

TABLE 5.—NUMBER OF WPA WORKERS RECEIVING TRAINING THROUGH THE NATIONAL DEFENSE VOCATIONAL TRAINING PROJECT, BY TYPE OF COURSE

JUNE 16, 1942

| Course                            | Number  | Percent |
|-----------------------------------|---------|---------|
| Total                             | 532,199 | 100.0   |
| Auto services                     | 1,317   | 4.1     |
| Aviation services                 | 3,175   | 9.9     |
| Construction                      | 756     | 2.3     |
| Drafting                          | 354     | 1.1     |
| Electrical services               | 1,021   | 3.2     |
| Forge                             | 488     | 1.5     |
| Foundry                           | 871     | 2.7     |
| Machine shop                      | 11,965  | 37.2    |
| Pattern making                    | 260     | 0.8     |
| Radio services                    | 279     | 0.9     |
| Riveting                          | 224     | 0.7     |
| Sheet metal                       | 3,751   | 11.6    |
| Ship and boat building and repair | 1,305   | 4.1     |
| Welding                           | 5,097   | 15.8    |
| Woodworking                       | 861     | 2.7     |
| Other                             | 442     | 1.4     |

<sup>1</sup> Does not include nontrainees employed on the project or airport servicemen, in-plant preemployment, and auxiliary shop trainees.

Former WPA bridge Worker learns to use bench type engine lathe.

of 40 hours has been authorized. In some instances, upon request, trainees are permitted to work 48 hours a week. The increase in hours conforms with the plans of the vocational school systems for operating their training facilities 24 hours a day, seven days a week.

### Auxiliary Shops

Of the more than 35,000 WPA workers employed on all national vocational training projects at the close of the fiscal year 1942, more than 1,400 were in auxiliary shops. The use of auxiliary shops for vocational training classes was initiated as a means of expanding existing training facilities by utilizing idle machine, welding, and sheet-metal shops.

These shops are operated in accordance with the procedures regulating the vocational training project. For example, a trade shop in Boston equipped with bench lathes, small shapers and millers, drill presses, and other auxiliary machines is being used for the training of women on light machine work. An arsenal in this area has offered to employ all the women that can be trained in the shop. When idle shops are leased, it is stipulated that should the lessor receive a war production contract, the shop is to be turned back at once and that as far as possible WPA trainees are to be retained.

### In-Plant Preemployment Training

Initiated near the close of the fiscal year 1941, in-plant training has proved particularly successful in preparing WPA workers for jobs in war industries. WPA workers, carefully selected for their previous work experience and potential abilities, are paid learners' wages by the WPA during a four-week training period in war production plants. The trainees are under the supervision of the plant management. They are placed at tasks comparable to those performed in the occupations for which they are in training. Few of the WPA workers have been disqualified after beginning in-plant training, and a majority have been placed on the company pay roll at the close of the training period. In June 1942, more than 1,500 WPA workers were taking in-plant pre-employment training.

### Women Trainees

The rapid expansion of war industries has brought women in large numbers into the labor market. Accordingly, the WPA has shifted many women workers from service and other projects into training projects. Women formerly employed on sewing projects are taught to operate small bench machines. They are being trained for jobs as light aircraft riveters; welders; lathe, drill press, and milling machine operators; tool grinders; solderers; molders; machine tool inspectors. They are also instructed in electrical assembly, and motor testing and repair; in blueprint reading and other occupations in demand by war industries. At the end of the fiscal year 1942, about 4,900 women, of whom 590 were receiving in-plant training, were employed on vocational training projects. More than 18,000 women have received training since July 1940.

### Training Physically Handicapped Persons

Rising manpower requirements have also created opportunities for physically handicapped persons. Those considered fit for training are certified and assigned to a WPA training project to acquire skill at various kinds of bench work and machine operations. Blind persons trained as sheet-metal workers by the

WPA in this special program have been accepted for employment at the completion of the training courses. Others have been trained in aviation assembly work.

Motor, rubber, and airplane industrial plants have found it satisfactory and profitable to employ physically handicapped persons who have attained varying degrees of skill as a result of this special training on WPA projects.

### **Airport Servicemen**

A nation-wide project for the training of WPA workers as airport servicemen was established under the WPA national defense vocational training program in the latter part of 1940. The project is sponsored by the War Production Board with the Civil Aeronautics Administration and the United States Office of Education as cosponsors.<sup>4</sup> Airports to be used as training sites are selected and approved by the CAA. The selection and training of instructors and the outlining and supervision of training techniques are responsibilities of the United States Office of Education. The WPA is responsible for the administration of the project; the assignment and compensation of instructors; and the selection, assignment, and compensation of trainees.

The airport servicemen trainees are certified WPA workers qualified by their interest, health, education, and experience. Only men between the ages of 18 and 35 with good eyesight and hearing and the equivalent of at least an eighth-grade education are eligible.

Training is given to groups of from 10 to 15 men for a period of 90 days. The trainees are given instruction in line inspection for take-offs, refueling, storage, hangar care and airport maintenance, and are schooled as apprentice mechanics and aircraft shop workers to serve as assistants to airport mechanics and operators.

WPA workers assigned to this project are preparing to help maintain and service planes at civil airports throughout the country. Men with such training are in demand also at army and naval air bases and at stopover points used by the Ferry Command.

Airport servicemen training classes have been in operation in 46 states; 42 classes were in operation on June 30, 1942, with more than 500 WPA workers receiving training.

### **Household Workers**

Projects for the training of household workers have been operated by the WPA under the ERA Act of 1939. Previous to this, similar projects were operated as household service demonstration centers. These projects provide work for unemployed persons as teachers, supervisors, and other personnel necessary to the operation of the project and at the same time train needed household workers.

From July 1, 1941 through March 31, 1942, about 900 persons completed the training course. In this period, more than a thousand persons withdrew from the course, presumably to take jobs. On June 16, 1942, about 300 persons were enrolled on this training project.

The training on these projects has usually been for 12-week periods. Instruction in routine household work and in the preparation and serving of meals is given the trainees by experienced home economists. Elementary training in child care is given on some projects. On these projects the trainees learn to bathe, feed, and care for young children by spending a part of their training period in the local WPA nursery school.

Until January 1942 this training was given through WPA service projects, and was available to persons registered with local public employment offices or other approved agencies and young persons employed on the out-of-school work program of the National Youth Administration, as well as to persons certified for WPA employment. No wage payments were made to trainees except to those assigned from WPA rolls. Most of those who were WPA trainees were paid half the scheduled unskilled "B" rate applicable to the locality in which the project was located.

In January 1942, existent household workers' training projects were placed under the direction of the training division of the WPA. Since that date only persons certified to WPA employment have been eligible and all trainees are paid the full unskilled "B" wage rate.

<sup>4</sup> The War Production Board assumed the sponsorship formerly held by the Advisory Commission to the Council of National Defense.

## Training Nonprofessional Personnel in Hospitals

WPA projects for training nonprofessional workers in hospitals and institutions were initiated late in the fiscal year 1941. The projects, developed under the health section of the WPA welfare program, have been in operation in 86 public or nonprofit institutions.

These training activities were begun in response to requests from various Federal agencies, hospital superintendents, health officers, and similar groups. The war has accentuated an already pressing need for trained nonprofessional personnel, such as ward helpers, orderlies, and other nonprofessional attendants, to give assistance in the elementary care of the sick.

Under the training program, certified WPA workers are given training and experience under professional supervision for service in hospitals and institutions. Trainees must be between the ages of 22 and 55, have an eighth-grade education or its equivalent, be in good physical condition and able to perform manual tasks, and have good standards of personal hygiene. The period of training extends from three to six months, with about a fourth of that time spent in classroom lectures and demonstrations. Practical experience in routine institutional nonprofessional services in all hospital departments is given under professional supervision. The curriculum includes instruction in personal hygiene and work relationships, ward housekeeping, care of institutional kitchens and the preparation and serving of food, nonprofessional sickroom procedures and first aid, care of convalescent children, and care of the aged and chronic invalids.

Hospitals and sponsors provide the teaching and supervisory personnel, the equipment, and

other facilities necessary for the operation of the project. The supervisor is a registered graduate nurse experienced in hospital administration and teaching. The WPA is responsible for the selection and assignment of trainees, timekeeping, payment of wages, general supervision and maintenance of training standards, and referral for employment.

Almost 5,000 persons had been employed on these projects by the end of the fiscal year 1942, including more than 1,300 receiving training as of June 16, 1942. The rate of employment of these trainees in hospitals and institutions at the close of the training period is generally high.

## Vocational Training Under the Adult Education Program

Vocational training courses under the adult education program have given employment to many unemployed teachers, and have provided training opportunities for large numbers of employed and unemployed persons seeking to increase their existing skills or to learn new ones. Teachers of the training courses are persons certified to the WPA rolls. Enrollees receive no compensation for attendance.

In January 1942, more than 55,000 persons were enrolled in the vocational training classes. This is less than half as large as the enrollment in January 1941. More than three-fourths of the enrollees were taking work in commercial subjects such as business English and arithmetic, accounting, stenography and typing. Others were taking courses in a great variety of subjects ranging from home economics to cosmetology and the arts. A smaller number was enrolled in courses giving instruction in radio engineering and aeronautics.

# EMPLOYMENT AND EARNINGS

DURING the seven-year period July 1935 through June 1942, the Work Projects Administration gave employment to more than 8,500,000 different persons. WPA employment reached its peak in the fiscal year 1939, during which an average of 3,014,000 workers were employed. For the fiscal year 1942, the average WPA employment was only 971,000, or 68 percent less than the highest annual average. The average for the 1942 fiscal year was the smallest in the history of the WPA program.

WPA employment was curtailed drastically at the beginning of the fiscal year 1942. The reduction was necessitated by the smaller appropriation for the year. From an average of 1,411,000 workers in June 1941, the number employed on WPA projects was reduced to 1,055,000 in July. There was little change in WPA employment in the following six months. Further reductions were made in January and February and by March the monthly average had dropped below a million. Continued curtailment brought the average down to 698,000 in June 1942, a reduction of 51 percent from the previous June.

With the expansion of war industries during the fiscal year, WPA workers found job opportunities in private industry. All job openings, of course, did not go to WPA workers. In seeking employment in war industries, WPA workers were in competition with many unemployed workers not on WPA rolls, and with large numbers of women workers who were entering

the labor market. The estimated unemployment in the United States in November 1941 was about 3,900,000.<sup>1</sup> By April 1942, unemployment had declined to 3,000,000 and in June 1942 was estimated to be 2,800,000.

The reduction in WPA employment during the fiscal year was not evenly distributed among the states because improvements in economic conditions were not uniform throughout the country. Although the general reduction was 51 percent, in 10 states it was more than 66 percent. In 23 states, reductions ranged between 50 percent and 66 percent; in the remaining 16 states (including 11 southern agricultural states and 5 industrial states of the Middle Atlantic and Middle West) WPA employment reductions ranged between 35 percent and 49 percent.

Despite the decline in the number of WPA workers in large population centers, the proportion of the total WPA employment represented by those areas increased. In June 1941, 37 percent of the WPA employment was in counties with cities of 100,000 or more population; by the end of June 1942 the proportion was 40 percent. The percentage of total WPA workers in those counties with towns of no more than 5,000 inhabitants dropped from 21 percent to 17 percent during the fiscal year. The changes in proportions of WPA employment in other communities were negligible.

---

<sup>1</sup> From the regular WPA *Monthly Report of Employment and Unemployment*. The WPA survey of unemployment was initiated in April 1940 by the WPA Division of Research. This work was transferred to the Bureau of the Census August 24, 1942.

## Labor Turnover on WPA Projects

The average rate of turnover of labor on WPA projects was higher in the fiscal year 1942 than in previous years. During this period, the monthly rate of all separations averaged 16 percent as compared with a monthly assignment rate of about 11 percent. Assignments during the fiscal year declined from 167,000 a month at the beginning of the year to 53,000 at the end. Total separations during this period averaged about 153,000 workers a month.

Voluntary separations during the year were high, averaging about 86,000 per month. During the last four months of the year, voluntary separations averaged from 10 to 13 percent of the total employment. Most voluntary separations were made by workers returning to jobs in private industry.

The WPA, in the fiscal year 1942, actively aided the return of workers to private or other public employment through its placement services. Information concerning workers was made available to interested agencies or em-

ployers, and they were given the opportunity to interview WPA workers on project sites. In some instances, previous employers of WPA workers were interviewed by WPA reemployment representatives and frequently the workers returned to their former jobs.

Included in the voluntary separations are those workers leaving for military service. During the fiscal year, 4,294 workers left WPA employment for this purpose, making a total of 18,443 since October 1940. The age of WPA workers is generally higher than draft age requirements, and most of the workers have dependents. Other voluntary separations are made because of illness, injury, or a new source of income.

<sup>a</sup> Community groupings are based on a classification of counties according to the population of the largest municipality in each county. Since March 1941 the classification of counties has been based on the 1940 population of the municipalities; prior to that time the 1930 population was used.

Separations made from WPA rolls because of the 18-month provision were comparatively small during the fiscal year 1942. Under the modifications to the 18-month provision in the act for the fiscal year 1942, persons continuously employed for 18 months were to be removed from employment only in the numbers necessary to provide jobs for persons who had been certified as in need and awaiting assignment to WPA projects for three months or more. Blind persons as well as veterans were exempted from the 18-month provision. From a total of 16,000 in July 1941, separations because of the 18-month provision dropped to 6,000 in August and amounted to only 1,000 in June 1942.

### Employment on WPA Projects Operated by Other Federal Agencies

Some workers have been employed on projects operated by other Federal agencies with WPA funds, but the number thus employed in fiscal year 1942 was much smaller than in any previous period. At the close of the previous fiscal year, in June 1941, an average of 41,000 workers was employed on projects operated by other Federal agencies. In July, this number had dropped to an average of about 14,000, and for December was only about 11,000. There was a sharp decrease in January 1942 to 3,000 workers. The monthly average dropped steadily in the subsequent months and in June 1942 slightly less than 1,400 persons were employed on other Federal agency projects.

The 1,400 workers employed in June 1942 on projects operated by other Federal agencies were distributed among eight agencies. The Bureau of Foreign and Domestic Commerce and the Weather Bureau, both of the Department of Commerce, gave employment to about 500 persons. More than one-fifth were employed on projects operated by the Veterans' Administration. The Bureau of Labor Statistics of the Department of Labor employed another fifth, and the remainder were distributed among five other agencies. These agencies included the Department of Agriculture, the Department of the Interior, the War Department, the Navy Department, and the Library of Congress.

## REPORT ON PROGRESS OF THE WPA PROGRAM

TABLE 8. NUMBER OF ASSIGNMENTS TO AND SEPARATIONS FROM EMPLOYMENT ON WPA PROJECTS <sup>A</sup>CONTINENTAL UNITED STATES  
MONTHLY, JULY 1938-JUNE 1942

| Month     | Assignments | Separations |                        |                        |                                 |         | Assignment rate (per- cent) <sup>B</sup> | Separation rate (percent) <sup>B</sup> |           |
|-----------|-------------|-------------|------------------------|------------------------|---------------------------------|---------|------------------------------------------|----------------------------------------|-----------|
|           |             | Total       | Voluntary <sup>C</sup> | Discharges and layoffs |                                 | Other   |                                          | Total                                  | Voluntary |
|           |             |             |                        | Total                  | 18-month provision <sup>D</sup> |         |                                          |                                        |           |
| 1938      |             |             |                        |                        |                                 |         |                                          |                                        |           |

<sup>A</sup> Prior to January 1940, data do not include nonrelief employment. Data for workers employed on WPA projects operated by other Federal agencies are not included in the figures shown for July and August 1938.

<sup>B</sup> Percent of total employment at beginning of month.

<sup>C</sup> Most of these separations were made for private employment; separations for such reasons as active military service, new sources of income, illness, death, etc., are also included.

<sup>D</sup> Separated in accordance with section 10 (b) of the ERA Act of 1939, section 15 (b) of the ERA Act, fiscal year 1941, and section 10 (b) of the ERA Act, fiscal year 1942, requiring separation after 18 months of continuous WPA employment.

The major activity of WPA workers on projects operated by other Federal agencies was research and statistical work. Some construction work for the Army and Navy was carried

on under the direction of the Bureau of Yards and Docks of the Navy Department and the Quartermaster Corps of the War Department. Projects for the conservation and improvement

of natural resources were conducted by the National Park Service and the Fish and Wildlife Service of the Department of the Interior, and by the Forest Service of the Department of Agriculture.

### Employment by Types of Projects

WPA workers engaged in a variety of project activities, reflecting the wide divergence in occupational skills and abilities of unemployed persons, and the difference in needs of communities for public facilities and services. Projects generally are divided into construction and nonconstruction types of work.

Construction work has always been the major activity of the WPA. In June of the fiscal year 1942, construction projects employed 58 percent of all workers on WPA projects, as compared with 68 percent employed on such projects in June 1941.

More than a third of all WPA workers were employed on war projects on June 16, 1942. Of this number, more than 185,000 were engaged on construction projects for the armed services or on other construction projects considered to be of importance to the defense program and the war effort. Almost 64,000 workers were employed on service projects in connection with war activities, and the remaining 38,000 were working on vocational training projects which were providing training in occupational skills needed in war industries.

The emphasis placed on war work did not change the relative importance of the major types of WPA projects. Projects for the construction or improvement of highways, roads, and streets continued to rank highest in the employment of workers. The average employment in June 1942 for this type of project was about 27 percent of all WPA workers, as compared with 36 percent in June 1941.

WPA 4150

Workers employed on public building projects on June 16, 1942, accounted for a little more than 9 percent of the total WPA employment. This is about the same percentage as in previous years. Work performed on this type of project has provided many communities with schools, libraries, gymnasiums, and hospitals and has furnished army and naval establishments with badly needed facilities.

The construction or improvement of water and sewer systems and other public utilities gave employment on June 16, 1942, to 51,000 workers, or more than 7 percent of all WPA workers. In June of the previous fiscal year, projects for the construction of public utilities represented 9 percent of total project employment.

Work on airports and airways has greatly increased in relative importance with the defense program and the war effort. On June 16,

1942, 5 percent of the WPA workers were employed on projects for constructing and improving airports and airway facilities. However, the number of workers employed (35,000) on these projects is only slightly more than half the number employed on the same type of project in June 1941.

Other major groups of construction projects employed about the same percentage of workers as in June 1941. Projects for the conservation of natural resources employed more than 2 percent, or 16,000 workers. The construction of recreational facilities which furnished many communities with parks, playgrounds, swimming pools, employed about 15,000 workers or 2 percent of the total. The remainder of the workers employed on construction projects were working on engineering surveys, sanitation projects, and other types of construction work.

The percentage of WPA employment on

<sup>A</sup> Data represent averages of weekly employment counts made during the months.<sup>B</sup> Public land inventory projects operated by the National Resources Planning Board of the Executive Office of the President with 1938 Act funds were continued with 1939 Act funds originally allocated to the National Resources Planning Board and subsequently transferred to the General Land Office of the Department of the Interior.<sup>C</sup> The Coast Guard was transferred from the Department of the Treasury to the Department of the Navy as of November 1, 1941.

service projects increased during the fiscal year, reaching more than 35 percent by June 1942. At the end of June 1941, service project workers

represented only 28 percent of total WPA employment. Welfare projects in this group represented 22 percent of the total WPA employ-

<sup>a</sup> Data apply to the last half of the month.<sup>b</sup> Separate data are not available; included in research and records.

ment in June 1942, public activities 8 percent, and research and records projects 5 percent.

In the group of welfare projects, the largest number of workers (81,000) was employed on projects for the preparation of hot lunches for school children, the canning and preserving of foods, and the distribution of surplus commodities. Projects for the operation of sewing rooms, in which large amounts of clothing and other articles were produced, employed 53,000 workers, or 8 percent of total employment. Workers on projects for public health and hospital work represented 3 percent of the total, or 18,000 persons.

Recreation and education projects in the group of public activities employed 18,000 and 17,000 workers, respectively, in June 1942. These projects supplied teachers for adult education classes and nursery schools, and leadership for recreation centers in military and war industrial areas. Library projects employed about 9,000 workers, art and museum projects 6,000, and music projects more than 4,000.

In the research and records group, the largest employment was on public records projects with about 19,000 workers on June 16, 1942. Re-

search and survey projects employed more than 12,000 workers.

Employment on WPA vocational training projects represented about 6 percent of the total employment on June 16, 1942, as compared with only 3 percent in June of the previous year. (This program is described in detail in another section of this report.)

The distribution of employment on the various types of projects varied from state to state. Construction projects gave employment to more than a third of the WPA workers in all but four states and in six states accounted for more than two-thirds. The relative importance of the major types of projects varied widely. Employment on highway and street projects in Maine was only 3 percent of total employment, but in Arkansas it amounted to 54 percent. On the other hand, airport and airway projects in Maine represented 44 percent of total employment and in eight other states was less than 2 percent. Employment on feeding projects in all states ranged from 3 percent in New Hampshire to 24 percent in South Carolina. The number of persons employed on the major types of projects in June 1942, is shown by state in Appendix Table III.

Table 11.—NUMBER OF PERSONS EMPLOYED ON PROJECTS OPERATED BY WPA, BY TYPE OF PROJECT

| JUNE 16, 1942                                      |         |         |
|----------------------------------------------------|---------|---------|

work permitted. Workers are permitted to work longer hours to make up time lost due to illness or other factors beyond their control. Projects certified by the Secretary of War or the Secretary of the Navy as important for military or naval purposes may be exempted from the limitations on hours in order to expedite the work on such projects.

The working schedule on certified war construction projects can be increased to 48 hours per week, with a proportionate increase in monthly earnings, under the authority granted to state WPA Administrators by the Commissioner of Work Projects in March 1941. In January 1942 the limitation of 48 hours was removed, thus leaving the determination of the working schedule to the discretion of state WPA administrators. This authority was to be used, however, only when all other means (such as the use of multiple shifts, the employment of additional workers by the project sponsors, or the use of additional equipment) were found to be inadequate.

The basic schedule of wages established in accordance with provisions of the ERA Act of 1939 remained in force during the fiscal year 1942. However, beginning with November 1, 1941, a supplementary allowance was granted to project wage employees (in the continental United States) to assist in meeting the increased cost of living. This additional payment was allowed only to project wage employees working on projects which were not exempted from the standard limitation of hours of work. The increase in monthly earnings amounted to a flat \$5.20 for each worker assigned to the unskilled "B," unskilled "A," intermediate, and skilled wage classes, and to \$3.90 per worker in the professional and technical wage class. As a result of these supplementary allowances, the monthly labor cost during the months immediately following November 1941 was increased by 6 percent.

The bases for differentiation in wage rates are the same as those adopted at the beginning of the WPA program, namely: the degree of skill required for the job to which the worker is assigned; the section of the country in which he lives; and the degree of urbanization of the county in which he is employed.

## Hours and Earnings of WPA Workers

The ERA Act, fiscal year 1942, continued the provisions of the previous year with regard to the hours of work on WPA projects. Under these provisions, project wage employees are required to work 130 hours per month but not more than 8 hours in any day or 40 hours in any week. Exemptions are permitted, however, under certain conditions, such as the need for protecting work already done on a project or meeting an emergency involving the public welfare (such as flood or hurricane). In the latter case, no limit is set on the hours of

<sup>A</sup> Since March 1941 the classification of counties has been based on the 1940 population of the municipalities; prior to that time the 1930 population was used.

<sup>B</sup> The basic schedule is applicable only to those employees on war projects subject to legislative exemptions who are scheduled to work in excess of 130 hours per month with a proportionate increase in earnings.

Wage Region I.—Connecticut, Delaware, District of Columbia, Illinois, Indiana, Iowa, Kansas, Maine, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, New Hampshire, New Jersey, New York, North Dakota, Ohio, Pennsylvania, Rhode Island, South Dakota, Vermont, West Virginia, Wisconsin.

Wage Region II.—Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, Wyoming.

Wage Region III.—Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia.

Project wage workers employed on exempted projects in excess of the standard 130 hours per month receive a proportionate increase in monthly earnings. The earnings of these workers, however, are based on the standard wage schedule in effect prior to November 1, 1941. Although the average hourly rate for exempted employees is less than the rate for workers based on the adjusted schedule, their monthly earnings are generally higher.

Workers exempted from the standard limitations of hours and earnings represented 20 percent of all project workers at the end of June 1942. Nearly nine-tenths of all exempted employees were employed in activities such as airport and airway projects, building projects, highway, road, and street projects, and vocational training projects.

During the fiscal year 1942, project employees (including project supervisors) worked more than 1,494,000,000 hours (Table 13) and earned \$721,100,000 on projects operated by the WPA.

The hours worked amounted to 40 percent less than the total hours for the fiscal year 1941. Total earnings for 1942 were 36 percent less than the total for the fiscal year 1941.

TABLE 13.—NUMBER OF HOURS WORKED ON PROJECTS OPERATED BY WPA, BY MAJOR TYPE OF PROJECT

CUMULATIVE THROUGH AND YEAR ENDING JUNE 30, 1942

| Type of project                               | Cumulative through June 30, 1942 |         | Year ending June 30, 1942 |         |
|-----------------------------------------------|----------------------------------|---------|---------------------------|---------|
|                                               | Number                           | Percent | Number                    | Percent |
| Total                                         | 18,389,192,436                   | 100.0   | 1,494,012,692             | 100.0   |
| Airports and airways                          | 369,888,687                      | 2.0     | 85,066,527                | 5.7     |

| Miscellaneous                                 | 535,172,453                      | 2.9     | 71,213,265                | 4.8     |

## WPA Jobs in the Various Wage Classes

Workers on WPA projects differ widely in their occupational backgrounds, ranging from unskilled workers to professional persons. Unskilled workers have always constituted a very large part of all WPA employees. In June 1942, persons assigned in the unskilled wage class represented 59 percent of the total project employment; 53 percent were assigned in the unskilled "A" wage class and 6 percent in the unskilled "B" class. As the level of WPA employment decreased, the percentage of unskilled workers also decreased.

About 17 percent of the workers were in the intermediate or semiskilled wage class on June 16, 1942. These workers are assigned as helpers to skilled or professional and technical workers or to work such as operation of power-driven equipment and office machines. Nearly 15 percent of the workers were assigned

in the skilled wage class as carpenters, sheet-metal workers, power-shovel operators, and other manual occupations requiring skill. Workers assigned in the professional and technical wage class, which made up slightly more than 4 percent of the total, were persons with considerable training in recognized professional, scientific, and technical fields. Supervisory personnel represented the remaining 5 percent of the workers.

Construction projects in general utilize a relatively larger number of unskilled workers than do service projects. In June 1942, more than 63 percent of the workers on construction projects were from the unskilled wage classes. Projects for the construction or improvement of highways, roads, and streets are particularly suitable for unskilled workers. More than 70 percent of the workers assigned to these projects were from the unskilled wage classes in June 1942. On public building projects, however,

<sup>A</sup> In September 1939, as prescribed in General Order No. 1, the unskilled wage class was divided into two groups: Group "B," including workers assigned jobs of a routine, simple, nonhazardous nature; and Group "A," including workers assigned to types of work normally done by construction and general laborers, and to routine clerical work.

<sup>B</sup> Data are based on pay rolls ending during the first half of the month.

TABLE 15.— PERCENTAGE DISTRIBUTION OF PERSONS EMPLOYED ON PROJECTS OPERATED BY WPA, BY TYPE OF PROJECT AND BY WAGE CLASS

JUNE 16, 1942

| Type of project                               | Grand total | Project wage employees |           |           |           |              |         |                            | Project supervisory employees |
|-----------------------------------------------|-------------|------------------------|-----------|-----------|-----------|--------------|---------|----------------------------|-------------------------------|
|                                               |             | Total                  | Unskilled |           |           | Intermediate | Skilled | Professional and technical |                               |
|                                               |             |                        | Total     | Group "B" | Group "A" |              |         |                            |                               |
| Total                                         | 100.0       | 94.9                   | 58.8      | 5.9       | 52.9      | 17.3         | 14.7    | 4.1                        | 5.1                           |

(A) Less than 0.05 percent.

30 percent of the workers were from the skilled wage class and only 46 percent were from the unskilled. Service projects provided for a relatively large number of professional and technical workers and semiskilled workers. Of the workers on public activities projects, 25 percent were from the professional and technical group, 25 percent from the semiskilled, and 32 percent from the skilled. These projects provide employment for teachers, artists, musicians, writers, and other professionally trained persons. Projects of these types are usually set up in urban areas where the unemployed workers include many from the professional, technical, and clerical fields. On the other hand, construction work on highways and roads is usually most urgent in rural areas, where there are large numbers of unemployed unskilled workers.

### Characteristics of WPA Workers

In addition to the skill and work experience of WPA workers, sex and age characteristics are determining factors in the selection of projects to be operated. These characteristics also affect the return of WPA workers to employment in private industry.

Men have always been in a large majority on the WPA rolls. But with the changing economic situation the percentage of women WPA workers has increased sharply. On June 16, 1942, women represented 27 percent of the total employment, the highest this proportion had ever been. WPA employment in June 1942, on the other hand, was at a lower level than it had ever been before.

| June 29      | 372,058 | 13.3                   |
| September 28 | 409,954 | 13.1                   |
| December 28  | 405,065 | 13.5                   |
| <i>1939</i>  |         |                        |
| March 29     | 391,442 | 13.6                   |
| June 28      | 352,784 | 14.6                   |
| September 27 | 251,071 | 14.6                   |
| December 27  | 333,620 | 16.1                   |
| <i>1940</i>  |         |                        |
| March 27     | 367,062 | 16.6                   |
| June 26      | 243,276 | 15.4                   |
| September 25 | 264,611 | 16.1                   |
| December 25  | 323,288 | 17.7                   |
| <i>1941</i>  |         |                        |
| March 26     | 312,128 | 18.8                   |
| June 25      | 254,811 | 19.2                   |
| September 24 | 201,212 | 19.7                   |
| December 16  | 230,184 | 22.0                   |
| <i>1942</i>  |         |                        |
| March 17     | 225,978 | 23.6                   |
| June 16      | 187,726 | 26.8                   |

A survey of certified WPA workers in February 1942 indicated the median age of WPA workers in the continental United States to be

46 years. Previous surveys in February 1939 and April 1941 showed the median age to be 39 years and 43 years, respectively. Only 37 percent of the WPA workers in February 1939 were over 45 years of age; this age group represented 44 percent of WPA employment in April 1941 and 54 percent in February 1942. In February 1942, nearly one-fourth (23 percent) of the WPA workers were under 35 years of age, more than one-fourth (27 percent) were 55 years of age and older, leaving 50 percent in the middle age group, 35 to 54 years.

The women employed on WPA projects were younger than the men. The median age of women in February 1942 was given as 44 years, and that of men as 47 years. The proportion of women in the various age groups differed markedly from the proportions given for men. Slightly more than one-fourth (26 percent) of all women were under 35 years of age, 55 percent were in the middle age group, and only 20 percent were 55 years of age or older.

The decrease in the level of WPA employment in recent years was accompanied by a rise in the proportion of Negro workers employed. In February 1942, Negro workers represented 18 percent of the WPA total as compared with 13 percent of the total in February 1939, and 17 percent in April 1941. Negro workers on the WPA rolls were, as a group, younger than white workers. Their median age in February 1942 was 44 years as

<sup>a</sup> Represents certified WPA workers employed in February 1939 whose certifications were continued in the review of need conducted at that time.

<sup>b</sup> Represents certified WPA workers employed on April 30, 1941.

<sup>c</sup> Represents certified WPA workers employed on February 27, 1942.

compared with 47 years for white workers. Negro women, for whom the median age was 39 years, were younger than Negro men, for whom the median age was 46 years. The median age of Negro women workers (39) was much lower than that of white women workers (45).

The average age of WPA workers varied considerably by state in February 1942. The

states on the Atlantic and Pacific Coasts had the largest proportion of WPA workers 45 years of age and over. The younger WPA workers predominated in the southern states. These differences reflect the difficulties older men had in obtaining employment in private industry, and the small amount of industrial employment in the South.

# FINANCIAL SUMMARY

THE program of the Work Projects Administration is financed jointly by the Federal government and by state and local agencies, which sponsor the projects. WPA funds (Federal), obtained by annual appropriations made by Congress, are used chiefly to pay the wages of project workers. The sponsors' share of funds is used principally for materials, equipment, and other nonlabor costs. Sponsors' contributions have increased from 10 percent in the first year of the program to 31 percent in the year ending June 30, 1942. The proportion of total funds supplied by the WPA has decreased correspondingly.

## Appropriations

To finance the WPA program during the year ending June 30, 1942, Congress appropriated through the Emergency Relief Appropriation Act, fiscal year 1942, the sum of \$875,000,000.<sup>1</sup> In addition, use of unobligated balances amounting to \$40,985,000, appropriated under earlier

ERA acts, was authorized, making available a total of \$915,985,000. From this amount, \$200,000 was transferred to the Procurement Division of the Treasury Department for the work relief supply fund and \$45,600 to the Federal Works Agency for administrative expenses, leaving a net total of \$915,739,000 for WPA operations (Table 18).

TABLE 18.—AMOUNT OF FUNDS AVAILABLE TO WPA DURING THE YEAR ENDING JUNE 30, 1942, BY SOURCE

| Source                                            | Amount                  |

| Net funds available to WPA                        | 915,739,382             |

<sup>A</sup> Includes \$16,486,530 of 1938, 1939, and fiscal year 1941 act funds which continued to be available for obligation on Federal construction projects through provisions of the fiscal year 1942 act. Of this amount, \$12,746,568 was available for projects operated by WPA and \$3,739,962 for WPA projects operated by other Federal agencies.

Source: Based on reports of the U. S. Treasury Department.

<sup>1</sup> Major acts under which the WPA operated and received appropriations were: The ERA Act of 1935, approved April 8, 1935; the ERA Act of 1936, June 22, 1936; the ERA Act of 1937, June 29, 1937; the ERA Act of 1938, June 21, 1938; the ERA Act of 1939, June 30, 1939; the ERA Act, fiscal year 1941, June 26, 1940; and the ERA Act, fiscal year 1942, July 1, 1941.

Five deficiency appropriations were made in the following acts: The First Deficiency Appropriation Act, fiscal year 1937, approved February 9, 1937; Public Resolution No. 80, 75th Congress, March 2, 1938; Public Resolution No. 1, 76th Congress, April 13, 1939; and the Urgent Deficiency Appropriation Act, 1941 (Public Law No. 9, 77th Congress), March 1, 1941.

In addition to the appropriation acts, several other acts of Congress have affected the organization of WPA and the conduct of its program. Reorganization Plan No. 1, prepared by the President in accordance with the Reorganization Act of 1939, incorporated the WPA in the new Federal Works Agency (July 1, 1939). Other legislation has pertained to the use of WPA funds for designated purposes or the transfer of WPA funds to other Federal agencies.

The 1942 ERA Act also made funds available to three other Federal agencies for expenses they incur in connection with the WPA program. The General Accounting Office received \$1,400,000; the Treasury Department \$6,005,000, and the United States Employees' Compensation Commission \$3,500,000.

## Allocations of WPA Funds

Of the total funds available to the WPA (\$915,739,000), 93 percent, or \$848,753,000, was

allocated by the WPA for the operation of projects. Allocations made for administrative expenses of the WPA amounted to \$34,971,000, and \$35,000 was set aside for the settlement of property damage claims.

Continuing a policy inaugurated in the fiscal year 1939, WPA allocated \$5,080,000 of its funds appropriated under the ERA Act, fiscal year 1942, to other Federal agencies for the operation of WPA projects and for administrative expenses incurred in this connection.<sup>2</sup>

<sup>a</sup> Not distributed by bureau.

Source: Based on reports of the U. S. Treasury Department.

The largest allotment, \$3,486,000, went to the Department of Agriculture in accordance with a provision of the act that \$3,500,000 could be allocated to bureaus of that department for the continuation of existing projects. An allocation of \$465,000 was made to the Bureau of Foreign and Domestic Commerce, Department of Commerce, for the continuation of the marketing laws survey. The Veterans' Administration

received \$387,000. A distribution of allocations under the ERA Act, fiscal year 1942, by agency and bureau is shown in Table 19.

The 1942 act also authorized, for the first time, allocations of WPA funds to other Federal agencies for administrative expenses incurred in connection with the planning and review of WPA projects. Such allocations were limited by the act to \$576,000. Of the \$357,500 allocated, \$104,900 went to the Interior Department, \$60,600 to the Federal Security Agency, and \$49,000 to the Navy Department. Smaller amounts were allocated to the Department of Agriculture, the Department of Commerce, the War Department, the Veterans' Administration, and the Labor Department.

## Expenditures of WPA Funds

Total expenditures of WPA funds during the year ending June 30, 1942, including liquidation of obligations incurred under earlier ERA acts, amounted to \$887,648,000. This is the smallest annual expenditure since the program began; it represents a reduction of 33 percent from that of the previous year, and of 60 percent from that of the peak year, 1939. The programs operated by the WPA accounted for \$879,248,000 of this amount, and the remaining \$8,400,000 was expended for programs operated by other Federal agencies.

The greater part of the WPA funds expended during the fiscal year 1942 was for the operation of work projects. Of the amount spent by the WPA, \$844,498,000, or 96 percent, was for project operations; \$34,717,000, or 3.9 percent, was for administrative expenses; and \$32,000 was used for the settlement of property damage claims. WPA funds spent by other Federal agencies included \$7,892,000 for project operations, \$258,000 for administrative costs incident to such operations, and \$250,000 for administrative expenses incurred in planning and reviewing WPA projects.

## Trends in Expenditures

The charting of monthly expenditures of WPA funds (see Chart 5) shows clearly the

<sup>2</sup> The ERA Act, fiscal year 1942, set a limit of \$8,500,000 on the amount that might be transferred for this purpose. The limits under earlier acts were: ERA Act of 1938, \$88,000,000; ERA Act of 1939, \$60,000,000, and ERA Act, fiscal year 1941, \$44,000,000. The ERA Act, fiscal year 1943, makes no provision for further allocations of this nature.

lag behind changes in the employment level and are subject to more pronounced fluctuations than employment.

Expenditures rose rapidly after the initiation of the WPA program in the summer of 1935, reaching approximately \$170,000,000 a month in the spring of 1936. There was a general trend downward in project employment from

then until the fall of 1937, and monthly expenditures averaged less than \$100,000,000 per month. The following winter, WPA operations were expanded to relieve the acute unemployment caused by the 1937 business recession, and monthly expenditures showed a steady rise, reaching a peak of \$215,000,000 in December 1938.

Since the end of the calendar year 1938, the general trend in expenditures has been downward, with only relatively slight and short-lived increases due principally to seasonal factors. In July 1941, expenditures were \$90,000,000. There was a steady decrease in WPA expenditures through the following months of the fiscal year 1942. By February, the expenditure level was \$69,000,000 and by June it had dropped to \$58,000,000. This is the smallest monthly expenditure since October 1935, the fourth month of the program.

### Administrative Expenditures

Each ERA act since the ERA Act of 1939 has set a limit on the amount of funds that the WPA may use for administrative purposes. The ERA Act for the fiscal year 1942 limited the amount of obligations that might be incurred for such purposes to \$35,466,000.<sup>3</sup> Of this amount, not more than \$29,016,000 was to

CHART 6

be used for personal services (salaries), \$2,800,000 for travel, \$500,000 for communication, and \$300,000 for printing and binding. Table 23 shows the obligations incurred during the fiscal year for the administration of the WPA program.

More than four-fifths of the cost of administering the WPA program is represented by salaries of personnel. The large reductions in administrative expenditures reflect the decreases in the administrative force. (See Table 20.) Numbering more than 35,000 at the peak

of WPA operations in 1938, the administrative staff has been steadily decreased since that time. At the beginning of the fiscal year 1942, about 19,000 persons were employed in an administrative capacity. Further reductions during the year brought this number down to about 11,000 by June 30, 1942. More than 10,000 of these employees were in state and local offices, about 900 were in the central office in Washington, and 250 were regional and other field office employees.

### Sponsors' Funds

State and local governments have cooperated in the operation of the WPA program since its beginning. Although the size of the program has varied from year to year, sponsors' contributions have increased each year from the beginning of the program. In the fiscal year 1942, sponsors spent \$381,150,000 on projects, bringing their total for seven years to \$2,722,500,000. The proportion of sponsors' expenditures to the total cost in this period rose from 10 percent in the first year of the program to 31 percent in the seventh year.

Sponsors' contributions to project cost are subject to statutory control. At least 25 percent of the total cost of all non-Federal projects approved after January 1, 1940, must be borne by the sponsors in each state. However, projects which have been certified as being important for military or naval purposes may be exempted from this regulation. During the fiscal year 1942, sponsors furnished nearly 23 percent of the total cost of certified war projects.

### WPA and Sponsors' Expenditures

Total expenditures on projects operated by WPA during the fiscal year 1942 amounted to \$1,225,648,000, of which WPA furnished \$844,498,000 and sponsors \$381,150,000. This is the smallest total amount spent on WPA projects for any fiscal year since the WPA began operations, and represents a reduction of more than 31 percent from the preceding year, and of more than 52 percent from the peak year of 1939.

CHART 7

**WPA AND SPONSORS' EXPENDITURES ON PROJECTS  
OPERATED BY WPA, BY FISCAL YEAR  
AND BY SOURCE OF FUNDS**

Through June 30, 1942

WPA 4154

### Objects of Expenditure

WPA funds are used to pay the wages of certified relief workers and some of the supervisory personnel, and a portion of the nonlabor costs. Of total project expenditures made by WPA during the fiscal year 1942, 86 percent represented the cost of labor, and 14 percent the cost of materials and equipment and other nonlabor items. The increase in the proportion of WPA funds used for nonlabor expenses, from 10 percent in the fiscal year 1941 to 14 percent in the fiscal year 1942, was due chiefly to the increased emphasis on war projects, which are primarily construction projects and involve higher than usual nonlabor costs.

Sponsors' funds are used mainly for the purchase of materials and equipment, the rent of equipment, and other nonlabor costs, items which represented 83 percent of total sponsors' expenditures during the fiscal year 1942. The balance of sponsors' funds, 17 percent, was used for the wages of supervisory personnel and skilled workmen not available among persons certified for WPA employment.

### Types of Projects

The distribution of expenditures by types of projects indicates a change in emphasis on certain kinds of work. The participation of the

WPA in the national defense and war programs accounts for much of this change. Airport work, for example, accounted for more than 8 percent of total project expenditures in fiscal year 1942, but slightly less than 4 percent in fiscal year 1941, and about 2 percent in earlier years.

A considerable amount of defense and war work is also included in other types of construction work, such as highways, roads, and streets, water and sewer systems and other utilities, and buildings. The relative importance of projects of these types has not changed, however,

as an expansion of defense work in some instances has been more than offset by a curtailment in nondefense work. This is the case in highway, road, and street work, which, while remaining the most important single type, shows a relative decline. Expenditures on these projects represented only 32 percent of the total in the fiscal year 1942, as compared with 39 percent in the preceding year and 42 percent in the fiscal year 1940. Public building work, including construction and improvement of buildings at military and naval reservations, shows a slight proportional increase - from 10 percent of total expenditures in fiscal year 1940

| 1939                    | 2,561,911,030    | 2,067,971,970   | 493,939,060     | 19.3                              |
| 1940                    | 1,902,920,067    | 1,408,571,637   | 494,357,430     | 26.0                              |
| 1941                    | 1,787,148,267    | 1,239,178,494   | 547,969,773     | 30.7                              |
| 1942                    | 1,225,648,254    | 844,498,229     | 381,150,025     | 31.1                              |

Source: WPA expenditures based on U. S. Treasury Department and WPA reports; sponsors' expenditures based on WPA reports.

to 11 percent in fiscal year 1941, and 12 percent in fiscal year 1942. The proportion of expenditures for water and sewer systems and other utilities which was less than 11 percent in the fiscal years 1940 and 1941 declined only slightly in the fiscal year 1942. Work on recreational facilities has been greatly curtailed. Expenditures for this work in fiscal year 1940 were 6 percent of total expenditures, 5 percent in fiscal year 1941, and only 3 percent in the fiscal year 1942.

Expenditures for service projects accounted for 27 percent of all WPA project expenditures during the fiscal year 1942 as compared with about 24 percent for the fiscal year 1941. Welfare projects, which include sewing, house-keeping aide, public health activities, and nursery schools, accounted for the largest share of expenditures in this group, or 14 percent of the total project funds expended in the fiscal year 1942. The public activities group, including education, recreation, library and arts projects, used up more than 8 percent of the expenditures. Four percent of the total was spent for research and records projects.

Training projects accounted for more than 2 percent of total WPA expenditures in fiscal year 1942. Included in these were vocational training schools, in-plant preemployment training, and training as airport servicemen and household workers. These projects are described in detail in another section of this report.

The sponsors' share of total expenditures for the fiscal year 1942 was more than 31 percent. This was about the same proportion as for the fiscal year 1941. Since the major part of

CHART 8  
WPA AND SPONSORS' EXPENDITURES ON PROJECTS OPERATED BY WPA, BY TYPE OF PROJECT

sponsors' funds is expended for material and equipment, sponsors' expenditures are relatively largest on projects requiring these items in large quantities. Representing 34 percent of the cost of construction projects in the fiscal year 1942, sponsors' expenditures were 37 percent of the total expended on highway, road, and street projects and on conservation projects; 36 percent on water and sewer and other utilities; and 34 percent on public buildings. Although many of the projects in this group are certified as important for military and naval purposes, and are therefore exempt from the 25 percent requirement, the sponsors' share of expenditures is more than 25 percent on most types of projects.

Less than 25 percent of the cost of all service projects was defrayed by sponsors. Because of

the relatively low nonlabor costs involved, projects in the research and records group showed the smallest proportion, 19 percent. Low nonlabor costs for training projects in fiscal year 1942, as compared with the previous year when the program was initiated, account for the fact that only 5 percent of the total cost of training projects was contributed by sponsors in the fiscal year 1942 as compared with 38 percent in the preceding fiscal year.

The kinds of projects operated under the WPA program in any state are determined primarily by the skills of the unemployed workers certified for WPA jobs, by the needs of the local communities for both military and civilian facilities and services, and by the financial circumstances of the state and local governments which sponsor the projects. In all but a few states the work programs during the fiscal year 1942 included every major type

of project, though the emphasis given individual types varied from state to state. Highway, road, and street projects, which have consistently been the outstanding type in most states as well as in the country as a whole, were, on the basis of expenditures, the most prominent type in 35 states during the fiscal year 1942. Public building projects, however, which ranked second in importance on a nation-wide basis, equaled or exceeded this position in only 11 states. On the other hand, airport and airway work ranked third or higher in 15 states, even though this type was only fourth nationally. This is a reflection of the wartime demand for greater airport facilities in strategic areas, especially in the coastal states. The amounts expended in each state and their percentage distribution are shown by major types of projects in Tables XII and XIII of the appendix.

# PROJECT ACTIVITIES

**T**HROUGH a program of useful public projects, the Work Projects Administration since 1935 has given employment to millions of unemployed workers throughout the country. These projects have added to the physical assets of local communities and increased public services. Although defense and war projects were prominent in the WPA program in the fiscal year 1942, the rest of the program was devoted to the same broad range of activities as in preceding years.

WPA defense and war activities in the fiscal year 1942 made outstanding contributions to the Nation's defenses. The construction and improvement work on airports throughout the country, carried on extensively in preceding years and now intensified, was of great importance. Work at military and naval establishments helped to provide facilities for our expanding armed forces. Many access roads to military and naval reservations and war production centers were constructed during this fiscal year. These aids to the war effort are discussed on pages 6-13 of this report.

Many projects which did not contribute directly to the Nation's war program were eliminated. Of those that were continued, some were concerned with the completion of important public works started in peacetime; others, although not designated as war projects, were continued because of their contribution to the health, welfare, and morale of the civilian population.

Although the WPA operated on a smaller scale during the fiscal year 1942 because of a reduced appropriation and a reduction in the

number of workers, substantial additions were made to its accomplishments of the past six years. In cooperation with local communities, WPA workers have improved the physical facilities for transportation and communication, education, recreation, conservation, public health, and sanitation. Through nonconstruction activities such as educational services, recreational leadership, and welfare services, substantial contributions also were made.

It is not possible to deal in numerical terms with all the WPA's project accomplishments. What follows is a sketch of the chief fields of WPA activity, and a summary account of accomplishments in these fields over seven years, with a few illustrative examples of the work accomplished during the fiscal year 1942.

## Transportation and Communication

The transportation and communication facilities of the Nation have been greatly improved during seven years of operation of the WPA program. Projects for the construction and improvement of roads and streets, airports, and waterways have constituted a major part of the program during this whole period.

Highway, road, and street projects are especially suitable for WPA program operation. Work for the improvement of roads and streets is greatly needed in most communities. Also, projects of this type give work to large numbers of unskilled and semiskilled workers and their operation can be adapted to fluctuating unemployment since the number of persons employed can be readily increased or decreased.

About 644,000 miles of highways, roads, and streets were constructed or improved throughout the seven years of operation of the WPA program through June 30, 1942. Nearly nine-tenths of this work was on rural roads and highways. Many of these were farm-to-market roads, which not only increased the farmers' opportunities to market their goods but made it possible for inhabitants of rural areas to take advantage of cultural and educational opportunities in more largely populated centers. Improvements to rural roads also reduced maintenance costs and made the savings available for use elsewhere. Of the mileage completed in the seven years, about 66,000 miles represented work in urban areas. More than 11,000 miles of road were constructed or improved in parks and recreation areas.

Less than one-tenth of the highways and roads built or improved by WPA workers in rural areas had high-type surfacing. Low-type surfaced or unsurfaced roads meet the requirements of most rural areas and the necessary improvements constitute a simple type of construction—the widening, grading, or drainage of roadbeds or the surfacing of the roads with crushed stone or gravel. Many urban streets, on the other hand, must accommodate a heavy traffic load. More than two-fifths of the streets widened, repaired, or newly constructed in urban areas had asphalt, concrete, or other high-type surfaces.

sections of the Rocky Mountains over Lo Lo Pass which, before the building of the highway, could not be reached by automobile. Other roads, such as the Wolf Creek and Wilson River Highways in Oregon, reduced the mileage between important points. These roads connected established highways and provided shorter and faster routes from Portland to the coast. Built through heavily wooded mountain country, they also provided access to about twelve billion board feet of timber.

Many of the streets constructed in urban areas by the WPA form connecting links with state and national highways. An example of this type of project is the Washington Avenue extension in the city of Albany, New York. The street was extended for about two miles to a dead-end county highway which connects with Route No. 5 of New York State and U. S. Highway No. 20. It provides an additional outlet for motor traffic to and from industrial and military centers in this vicinity and is expected to be an important link in a proposed superhighway across New York State. In order to avoid the use of steel reinforcing, a nine-inch depth of concrete was used instead of the usual eight.

The construction of bridges and viaducts has been a necessary part of highway improvements. During the seven years ending June 30, 1942, more than 77,000 new bridges and viaducts were built by WPA workers and improvements were made to about 46,000 others. Some of the bridges replaced old structures which were unsafe or inadequate for heavy motor traffic. The viaducts speeded traffic on heavily traveled highways and city streets and eliminated hazardous crossings for both automobile traffic and pedestrians.

Other work incidental to highway improvement includes the construction and improvement of more than 161,000 miles of roadside drainage ditches; the building of more than 23,000 miles of sidewalks and paths and the improvement of about 7,000 miles; the construction and improvement of more than 1,000,000 culverts, 28,000 miles of curbs, more than 6,000 miles of gutters, and about 4,800 miles of guardrails and guardwalls. WPA workers also landscaped more than 46,000 miles of roadside. To add to the safety of motor travel, nearly

TABLE 27. HIGHWAYS, ROADS, AND STREETS CONSTRUCTED OR IMPROVED ON PROJECTS OPERATED BY WPA

| Item               | Miles   |                   |                                 |
|--------------------|---------|-------------------|---------------------------------|
|                    | Total   | High-type surface | Low-type surface and unsurfaced |
| Total              | 643,977 | 86,586            | 557,391                         |
| Rural roads        | 596,322 | 51,626            | 544,696                         |
| Streets and alleys | 66,392  | 29,097            | 37,325                          |
| Other roads        | 11,263  | 2,863             | 8,370                           |

Into some areas previously inaccessible to motor vehicles, the WPA has built roads, such as the Lewis and Clark Highway, which was under construction in the state of Idaho. This road was cut through rough granite ridge

TABLE 28.—BRIDGES, CULVERTS, AND OTHER ROAD APPURTENANCES CONSTRUCTED OR IMPROVED ON PROJECTS OPERATED BY WPA

CUMULATIVE THROUGH JUNE 30, 1942

| Type of road appurtenance | Unit of measurement | Total     | New construction | Reconstruction or improvement |
|---------------------------|---------------------|-----------|------------------|-------------------------------|

| Culverts                  | Number              | 1,161,381 | 1,036,551        | 124,830                       |
| Bridges and viaducts      | Number              | 122,758   | 77,053           | 45,705                        |
| Wood                      | Number              | 80,425    | 55,148           | 25,277                        |
| Steel                     | Number              | 22,193    | 6,416            | 15,777                        |
| Masonry                   | Number              | 20,140    | 15,489           | 4,651                         |

100,000 light standards were installed or improved on about 2,500 miles of road. More than 900,000 traffic signs were erected and 5,000 miles of traffic control lines were painted.

In addition to the vast amount of construction work which was done to improve automobile travel, WPA workers made traffic surveys in hundreds of communities throughout the country. The findings of many of these surveys have been used in increasing the safety and efficiency of motor transportation, and are a basis for planning additional new construction and reconstruction.

A large portion of the airport improvement work done in all sections of the country since 1935 has been accomplished through WPA projects. WPA workers, moreover, have added to the safety of air travel by installing thousands of airway markers and constructing and improving airway beacons. Work performed on airport and airway projects has proved of inestimable importance to the defense of the Nation, and these projects are now designated as war projects. WPA's accomplishments in this field are described in some detail on page 10 of this report.

With respect to water transportation, more than 700 docks, wharves, and piers have been constructed or reconditioned, resulting in the improvement of 89 miles of waterfront. In addition, almost 300 miles of artificial channels have been built or improved.

WPA work in the field of communication has included the installation or reconditioning of more than 6,100 miles of telephone and tele-

graph lines which have aided the fire prevention work of the Forest Service and improved communication facilities at other Federal establishments. WPA workers have also installed or repaired about 3,500 miles of police, fire alarm, and traffic signal systems.

## Education

The WPA has assisted state and local departments of education in the improvement and extension of educational facilities and services in many communities. School plants have been built, and educational services have been provided for groups not usually included in public education programs.

About 5,700 new school buildings have been built in the seven years of operation of the WPA program. The types of buildings constructed varied according to the needs and means of the localities served. Most of them are small structures with a capacity of 150 pupils or less, such as the grade school building constructed in fiscal year 1942 in the Wichita School District, Clackamas County, Oregon. This one-story building with a basement replaced an old school constructed in 1909. Other schools built by the WPA provide accommodations for a larger number of pupils, as the two-story reinforced concrete building at Clyde, North Carolina. The old building, which had been condemned as unsafe, was demolished and materials were salvaged for use in the new two-story building, which contains 21 classrooms, an auditorium, library, cafeteria, home economics department, office space, and shops for manual training.

Improved school facilities have made it possible for many small communities to broaden their school curricula. In Columbia and Lincoln Counties, Arkansas, for example, after the consolidation of small school districts, the need arose for new junior-senior high school buildings. Through WPA projects, two brick veneer buildings were constructed, each containing 11 classrooms, a study hall, a combination auditorium-gymnasium, and facilities for vocational training and home economics work.

WPA workers enlarged and improved more than 33,000 additional school buildings which had been inadequate to care for increased en-

WPA nursery school for children of employed mothers, Burbank (Calif.)

rollment, or had fallen into disrepair, often to such an extent that they had been condemned as unsafe. Additions built to some schools provided facilities for special types of training. Auditoriums, gymnasiums, and cafeterias were constructed. The lighting, heating, and plumbing systems of other schools were modernized. Improvements made to school grounds include the building of athletic fields and tennis courts, landscaping, and the construction of walks and drives.

The WPA has helped in the development of specialized services for groups who do not come within the scope of the regular public school system. Unemployed teachers are made available through the WPA to conduct classes for adults. Nursery schools are provided for preschool children from low-income families. Education projects are usually operated under the sponsorship of state departments of education to insure compliance with state standards for teacher qualifications and subject matter of courses.

One of the outstanding activities of the WPA adult education program has been the assistance given to aliens in obtaining their citizenship. Classes are conducted in the principles of American government and the duties and privileges of citizenship, along lines suggested by the Immigration and Naturalization Service. In addition, citizenship information centers are operated and letters are sent to aliens instructing them as to the necessary steps for naturalization. In Missouri, for example, more than 8,000 aliens were naturalized or took steps leading to naturalization during the fiscal year 1942; about 90 percent of this number had attended WPA citizenship classes. In Michigan, the WPA citizenship project aided a majority of the persons who have been naturalized there since the project has been in operation.

Literacy classes are an important part of the WPA adult education program. Many aliens, as well as citizens, are enrolled in these classes, because ability to read and write English is a

necessary prerequisite to their becoming American citizens. For this reason literacy and naturalization classes have been combined in many states, and data for the country as a whole are available only on this basis. In January 1942 more than 98,600 persons were enrolled in literacy and naturalization classes throughout the country.

The adult education program has provided certain types of vocational training through which many persons are enabled to obtain new skills or to acquire greater skill. More than 55,000 persons were enrolled in these classes in January 1942. This program, as well as other types of vocational training offered on WPA projects, is discussed in the section beginning on page 14.

Another important WPA education activity is the operation of nursery schools for preschool children from low-income groups. This program was expanded during the fiscal year 1942 to include children of working mothers, of men in the armed forces, and of industrial workers engaged in war production. The children are given well-balanced noonday meals, a daily health inspection, and essential health services. Their daily program includes indoor and outdoor play activities with the use of approved nursery school equipment. In January 1942, more than 35,000 preschool children were enrolled in 1,250 nursery schools. Closely associated with the nursery school program are the homemaking and parent education classes conducted by WPA teachers for the parents of children enrolled in the nursery schools and other parents. Courses include such subjects as consumer education, budgets, diets, and child care. More than 87,000 persons were enrolled in these courses in January 1942.

Other educational activities of interest to the general public or of benefit to groups in need of specialized services have been carried on by the WPA. Its lectures and forums and art and music classes have attracted large numbers of persons. Its correspondence courses have given many people unable to attend classes an opportunity to pursue their educations. Visual aid materials, such as charts, posters, relief maps, and three-dimensional models, have been prepared by WPA workers for use in various types of instruction. These have been of particular

value in classes for the deaf and the blind. Classes have been conducted by the WPA for these and other handicapped persons.

Educational opportunities in many local communities have been broadened by the extension and improvement of library facilities. During the seven years of operation of the program, WPA workers have built 140 new libraries and have enlarged or reconditioned more than 900 others. Many types of library services have been rendered. Traveling libraries, or bookmobiles, have made regular library service available to many small communities for the first time. Demonstration library projects have encouraged the establishment of libraries in areas where none existed. WPA workers have assisted inadequately staffed libraries, helping to catalog books, to prepare shelf lists, and to perform other library services. In the three months prior to June 30, 1942, more than 1,660 libraries were being operated through WPA projects and aid was given to 4,380 others. In the past seven years WPA workers have repaired or renovated about 94,000,000 books.

Many important educational and library services have been rendered to the armed forces and to the war agencies during the fiscal year 1942. These phases of the WPA program are discussed on pages 11-12.

## Recreation

The WPA has been of much assistance to local communities in providing opportunities for public participation in wholesome recreational activities. Facilities for indoor and outdoor sports of all kinds have been expanded and improved through WPA projects sponsored by state and local agencies. WPA recreation workers have also helped to develop well-rounded community leisure-time programs.

More than 8,500 recreational buildings have been constructed by WPA workers in the past seven years, additions have been made to 600 others, and more than 5,700 have been renovated and repaired. Included among the new buildings are more than 400 auditoriums and 1,200 gymnasiums. One of these is the gymnasium under construction at Paris, Illinois, during the 1942 fiscal year. The building has space for recreational assembly and educational

facilities not only for the student body at Paris High School, but for the general public. Basketball is a popular sport in this area and in previous years crowds have been turned away from games and tournaments, but the new building provides adequate seating accommodations for 3,000 persons.

The more than 8,100 parks built or improved through WPA projects are a source of enjoyment to hundreds of thousands of people. Many of these projects have provided parks for small communities for the first time. Others have made large recreation areas more useful to the general public. In addition, WPA workers have built or improved more than 12,600 playgrounds, including about 10,000 school playgrounds. Many of the playgrounds were in crowded areas where children previously had no safe place to play.

Wider participation in outdoor sports has been encouraged by the provision of various facilities. About 3,000 athletic fields have been built by WPA workers and 2,500 have been enlarged or improved. Parks and playgrounds have also been equipped with thousands of handball, tennis, and horseshoe courts. More than 600 public golf courses have been built or improved. In sections where winter sports are popular, WPA workers have built ice skating areas, ski trails, and ski jumps.

| Gymnasiums.....                    | 1,220            | 272       | 737                           |
| Other.....                         | 6,953            | 208       | 4,574                         |

Among the more than 1,100 swimming pools and 900 wading pools which WPA workers have built or reconditioned are those built in Highland Park, Campan Park, and Lincoln Park in Grand Rapids, Michigan, during the fiscal year 1942. Combination swimming pools and bathhouses, complete with dressing rooms, lockers, toilet facilities, and purification equipment, were constructed in each of the three parks. The pools are surrounded by 15-foot concourses, under which are located the dressing rooms, rest rooms, pumping and service rooms. Each pool has a capacity of about 250 bathers at one time. A children's wading pool is provided at one end of each pool.

Public enjoyment of outdoor entertainment has been increased by the construction of 2,300 stadiums, grandstands, and bleachers. More than 360 outdoor theatres and bandshells have also been built.

The WPA has contributed to the expansion of recreational opportunities by working with state and local agencies to provide diversified community recreation programs for persons of all ages. Game rooms and play centers for small children; sports and athletics for young people; and handicrafts, folk dancing, and other forms of social recreation for adults have been some of the major activities. WPA recreation projects have often operated through existing community centers. In communities where recreation services were lacking, WPA recreation leaders have cooperated with public agencies and civic groups, such as churches, labor unions, and business groups, for the organization of community leisure-time programs.

With the concentration of large numbers of persons in areas where war work and military training are being carried on, the need for recreational services has greatly increased during the past two years. Through a nation-wide recreation project a comprehensive program has been developed to provide entertainment for members of the armed forces and for workers in war industries. Activities under this program are discussed on page 12.

## Public Health and Sanitation

The WPA program has contributed in a variety of ways to the promotion of public

health and the prevention of the spread of disease. Through WPA projects initiated by national, state, or local agencies responsible for facilities and services affecting public health, hospital facilities have been expanded, medical and nursing services have been extended, and more healthful surroundings provided. WPA research workers have cooperated with health authorities in conducting studies and experiments to aid in the cure and prevention of tuberculosis, syphilis, and other communicable diseases.

The construction by WPA workers of more than 200 new hospitals in the last seven years has extended hospital service to thousands of people, many of whom were living in communities where such service had been previously lacking. One hospital which was completed during the fiscal year 1942 is in Bedford, Indiana. A new hospital and nurses' home replaced old buildings inadequate for the needs of the city of Bedford and of adjacent communities which had no hospital facilities. The hospital building, constructed of reinforced concrete with Indiana limestone walls, consists of three stories and a basement and has a bed capacity of sixty. The nurses' home provides living quarters for fifteen nurses. The stone industries of Lawrence County depend entirely upon the hospital for the care of injured quarry and plant workers.

In addition to constructing new hospitals, WPA workers have built additions to or improved the facilities of about 2,200 other hospitals. An example is the three-story addition to the Levering Hospital in Hannibal, Missouri, which was under construction during the fiscal year 1942. The new wing provides additional space for 53 beds and includes a basement with an assembly hall, a Red Cross training room, a dining room for doctors and nurses, and a soiled clothes compartment. The building also houses a new obstetrical department and a nursery with a plate-glass front.

The WPA has assisted local health authorities in the operation of medical and dental clinics which have made medical and health services available to thousands of people who could not otherwise afford them. Nearly 100 health centers were being operated through WPA projects in January 1942. About 73,500 tests

A Includes additions to existing facilities.

and immunizations were given at these centers in that month. Vision and hearing tests given to school children resulted in the correction of defects in many cases and in the establishment in many local school systems of special classes for children handicapped in these respects. During the same period, WPA workers gave assistance to more than 1,100 hospitals, custodial institutions, clinics, and other health agencies. These services included clerical assistance in public health and hospital offices, nonprofessional duties in hospitals, and assistance in laboratory work.

WPA training courses for nonprofessional work in hospitals have helped to fill the present need for persons who can assist in the care of the sick under professional supervision. This program is discussed on page 18.

Important contributions to public health have also been made through WPA projects for improving water systems. In the seven years ending June 30, 1942, about 250 water treatment plants have been built and about 175 others have been reconditioned or enlarged. Nearly 16,000 miles of water main and distribution lines have been laid. Water has been brought to the homes of about 873,000 families by the installation or improvement of consumer connections. Where there was no other water supply available, WPA workers have dug or repaired about 5,900 wells. Nearly 2,900 storage tanks and reservoirs have been constructed and improvements have been made to about 725 others.

Many of these projects have been in small communities where there were no central water

systems or where existing facilities were inadequate or outmoded. In Barnard, Kansas, a town of about 350 people, WPA workers had almost completed a new water system by the end of the fiscal year 1942. A central water system was badly needed, as the ground water underlying the town was highly mineralized and not suitable for domestic use. The new system includes a well, a pumping station, a 50,000-gallon elevated concrete tank, water mains, consumer connections, and fire hydrants.

A much more extensive type of project was the DeKalb County (Georgia) water works system under construction during the fiscal year 1942. A raw water reservoir with a capacity of 50,000,000 gallons, a pumping station, a filtration plant, a clear well with a storage capacity of 375,000 gallons, and an elevated tank reservoir with a capacity of 1,000,000 gallons have provided an adequate water supply for the residents of DeKalb County. Some sections of the county had previously had no central water system and others had been served by systems which were inadequate.

Improvement of sanitation facilities has also contributed to the protection of health in many communities. Nearly 950 sewage treatment plants have been built and 475 others have been enlarged or reconditioned through WPA projects in the past seven years. In addition, WPA workers have built or improved 27,000 miles of storm and sanitary sewers and installed more than 585,000 sewerage service connections. In areas where no sewage disposal system existed, 2,287,000 sanitary privies have been built. To facilitate garbage disposal, almost 200 incinerator plants have been built or reconditioned.

Adequate sewage disposal systems not only provide more healthful living conditions within communities, but often protect surrounding streams from pollution and make them safe for healthful recreational purposes. An example is the sewage disposal plant completed at Danville, Kentucky, during the fiscal year 1942, which prevents sewage from reaching Harrington Lake. The new system treats all of the city's sewage at one point instead of incompletely treating it at four points as was formerly done. The plant has a capacity of 1,000,000 gallons per day.

Measures which have been taken for the control of malaria in mosquito infested areas have been another important part of WPA health activities. Through WPA projects more than 15,000 miles of drainage ditches and pipes have provided drainage for thousands of acres of swamp land. An additional 19,000 miles of drainage facilities have been reconditioned. WPA workers have also sprayed oil and insecticide on ponds and in marshy places where mosquitos breed. During the past two years much of the WPA malaria control work has been in the neighborhood of military and naval reservations and war production centers.

### Welfare Services

Through its welfare projects the WPA has been able to provide many services for low-income families. It is on these projects that most of the women on WPA rolls have been employed. Through their activities school lunches have been served to millions of undernourished school children, and foods have been canned and preserved largely for the use of public institutions or in conjunction with the school lunch program. Clothing and other articles have been made on sewing-room projects for distribution to needy families and public institutions. Housekeeping aides have been trained and made available for service in homes of the needy where illness or other emergencies exist.

One of the most important WPA activities has been the school lunch program. In the seven years ending June 30, 1942, WPA workers prepared and served to school children more than 1,000,000,000 hot lunches. In the three months prior to June 30, 1942, more than 75,000,000 hot lunches were served to children in more than 24,000 schools. The food was supplied by WPA gardening projects, the Agricultural Marketing Administration, and local sponsors. The provision of one healthful well-balanced meal a day has done much to improve the health of children from low-income groups. School authorities report that as a result school work and attendance records have improved. The school lunch program has proved so important in promoting better health among

**TABLE 31. ACCOMPLISHMENTS ON SELECTED TYPES OF WELFARE PROJECTS OPERATED BY WPA**

CUMULATIVE THROUGH JUNE 30, 1942

| Item                              | Number        |
|-----------------------------------|---------------|
| Visits made by housekeeping aides | 31,028,000    |
| Lunches served to school children | 1,093,203,000 |
| Food preserved:                   |               |
| Quarts canned                     | 73,004,000    |
| Pounds dried                      | 9,176,000     |
| Articles produced in sewing rooms | 486,572,000   |
| Garments                          | 374,917,000   |
| Men's                             | 75,056,000    |
| Women's                           | 84,797,000    |
| Boys'                             | 65,772,000    |
| Girls'                            | 76,299,000    |
| Infants'                          | 44,361,000    |
| Diapers                           | 28,629,000    |
| Other articles                    | 111,655,000   |

school children, that in many areas where this activity could not be continued as a WPA project, school authorities have taken steps to make it a part of the regular school program.

With the sharp rise in employment of women in war industries, the public provision of a noon lunch to children became a year-round necessity in many areas, and summer feeding centers were established. Many of the boys and girls who appeared at these centers daily would otherwise have gone without any lunches at all or would have eaten cold un nourishing lunches.

Projects for the canning and preserving of foods have also been an important part of the WPA feeding program. Millions of quarts of vegetables and fruits have been canned or preserved and other foodstuffs have been dried by the WPA workers on these projects. Much of the food preserved was produced on WPA gardening projects.

Millions of garments and other articles have been produced on WPA sewing projects during the past seven years for distribution to public institutions and to families in need. In addition to the 375,000,000 garments made for men, women, and children, more than 111,000,000 other articles, including towels, sheets, pillowcases, and hospital supplies and surgical dressings have been produced. In some areas workers on sewing projects repaired army clothing and equipage.

WPA workers have also given valuable services to needy families through housekeeping

aide projects. These projects were developed to train women to render housekeeping services to low-income families in cases of illness and other emergencies. In the past seven years, housekeeping aides, who had been trained on WPA projects, made more than 31,000,000 visits to homes where they assisted in general housework, care of children, and simple care of the sick. During the fiscal year 1942 a new activity, the housekeeping clinic program, was developed in some areas to assist homemakers to meet problems of nutrition, food and commodity shortages, and increased living costs.

## Conservation of Natural Resources

WPA projects have played an important part in the Nation's conservation program during the past seven years. Through these projects, work has been carried on for the prevention of soil erosion, the conservation of forests, and the protection of wildlife.

The construction or improvement of 1,600 miles of levees and embankments, 200 miles of jetties and breakwaters, 125 miles of bulkheads, and 1,900 miles of retaining walls and revetments has prevented overflows and floods, saved valuable topsoil from being washed away, and at the same time conserved water. Improvement work on more than 4,300 miles of riverbanks and shores and 8,200 miles of streambeds and the riprapping of more than 17,000,000 square yards have served similar purposes. In addition, millions of acres of soil have been

A Includes additions to existing facilities.

reclaimed, principally in the western part of the United States, by the construction of irrigation canals and the placement or improvement of more than 6,600 miles of pipe and flume.

For the conservation of forests, more than 175,000,000 trees have been planted by WPA workers in publicly owned forests throughout the country. Forest protection work has also included the construction or improvement of more than 7,200 miles of firebreaks and the building of fire and forest trails, forest ranger stations, and fire look-out towers. Other activities for the preservation of forests have included spraying of trees and spreading of poison for protection against plant diseases and insects.

Through other WPA projects, work has been carried on for the protection and propagation of game and fish. The construction and enlargement of 290 fish hatcheries and the reconditioning of about 160 others has facilitated the stocking of lakes and streams with fish. Nearly 8,200,000 bushels of oysters have been planted in depleted oyster beds on the Atlantic and Gulf Coasts. Numerous sanctuaries, shelter houses, and feeding stations have been established for the protection of game birds and animals.

Much of the work which has been performed on WPA projects for other purposes has also aided in the conservation of natural resources. Roadside drainage work has been of value in preventing soil erosion, as has the planting of trees, grass, and shrubs along roadways, waterways, and in parks. Drainage operations for the prevention of malaria have helped to reclaim thousands of acres of land.

WPA research workers have assisted state universities, colleges, agricultural experiment stations, and conservation commissions in a variety of studies which have been of benefit in the development of conservation programs.

## Other Accomplishments

In addition to the types of work described in the preceding section, which have made up the bulk of WPA operations during the past seven years, many other activities of importance to communities throughout the country have been carried on.

Among the 1,800 office and administrative buildings constructed or enlarged and the 4,300 reconditioned and improved, were courthouses, municipal buildings, and other buildings for the use of state, county, and local governmental units. About 200 penal institutions were built or enlarged and more than 500 others were reconditioned. Dormitories, numbering more than 1,400 newly constructed and enlarged and 5,600 improved, added to the facilities of state schools and colleges and other public institutions. More than 300 new firehouses were built and additions or improvements were made to about 2,350 others. Other construction included garages for highway departments and other public agencies, storage buildings, and barns and stables.

The Ellis County courthouse, located in the city of Hays, Kansas, is a typical example of a WPA construction project for the improvement of community facilities. This four-story fireproof building, constructed of native stone, contains 63 working rooms and is equipped with the most up-to-date heating, water, and lighting systems. It replaces an old building which was inadequate and unsafe for occupancy. When the building was dedicated, a public holiday was declared, so that all the people of Ellis County could attend the ceremonies.

Public benefits conferred through certain types of WPA projects, such as research, music, and art, cannot be measured in physical terms. Professional and clerical workers employed on research projects have, in cooperation with colleges and universities and other public agencies, carried on studies of social and economic conditions, agricultural research and experiments, historical studies, and many other types of research.<sup>1</sup> Clerical workers on records projects have facilitated the work of vital statistics offices, law enforcement agencies, and other public agencies by arranging their records in more convenient forms.

Through the art projects contributions have been made to the cultural life of the Nation. WPA artists have decorated the halls of schools,

<sup>1</sup> A list of research project reports may be found in the *Index of Research Projects* (Washington, D. C.: Work Projects Administration, Vol. I, 1938; Vol. II, 1939, in collaboration with National Resources Committee and State Planning Agencies; and Vol. III, 1939) and in the *Bibliography of Research Projects* (Washington, D. C.: Work Projects Administration; Nos. 1-4, 1940 and No. 5, 1941).

WPA workers built this court house at Detroit Lakes (Minn.)

hospitals, and other public buildings with more than 2,500 murals. They have produced more than 16,500 pieces of sculpture, 10,000 fine print designs, and 108,000 easel works. About 22,000 plates have been made for the Index of American Design. Art centers have been established for the teaching of art to children and adults. Exhibits of fine art and handicrafts have been widely circulated.

Works of great composers have been made available to millions of people through open air concerts, performances at public gatherings, and radio broadcasts by the workers on WPA music projects. In the month of January 1942 they gave more than 100 radio broadcasts, and about 6,000 concerts to audiences totaling more than 2,000,000 people.

WPA workers on writers' projects have prepared guidebooks, known as the American Guide series, for all of the states, the principal cities, many counties and towns, and for Alaska and Puerto Rico. In addition, they have written pamphlets and articles on many phases of American life and have made available a valuable collection of research data.

## Project Procedures

The accomplishments described in the preceding pages reflect the many factors involved in the selection of a project for WPA operation. All work undertaken must be suited to the skills of available workers, and it must provide for a public need. The selection of projects is also governed by the financial ability of sponsors to provide funds for nonlabor costs of projects.

Most WPA projects have been sponsored by state or local agencies with legal authority to undertake the responsibilities that sponsorship entails. Some, however, which are nation-wide in scope or which supplement the functions of the Federal Government, have been sponsored by Federal agencies, such as the War and Navy Departments and the U. S. Public Health Service. In the past two years, many projects sponsored locally have been certified by the Secretary of War or the Secretary of the Navy as important for military or naval purposes.

Sponsors are required to bear one-fourth of the total costs of non-Federal projects undertaken in each state. This provision has been applied on a state-wide basis in order that the

WPA may be able to render assistance in areas where unemployment is great, but where sponsors are not financially able to bear one-fourth of the project costs. Sponsors usually provide most of the materials, supplies, and equipment and the Federal Government pays the wages of the certified workers employed on the project. Nonlabor costs which can be paid from Federal funds are limited to \$6 per month per worker. However, when increased prices of materials justify it, the Commissioner of Work Projects is authorized to raise the average to as much as \$7. Certified war projects may be exempted from these requirements.

Local public agencies desiring to initiate projects, submit applications to the state WPA offices; the applications must be accompanied by detailed plans, cost estimates, evidence of the need for the project, and other related information. Project applications are then reviewed by the state offices, which utilize the technical advice of experts in the field of work covered by the project in order to determine its desirability.

Projects approved in the state office are submitted to the Federal WPA in Washington for final review. Certain types of projects are subject to review by other Federal agencies. The Public Roads Administration, Civil Aeronautics Administration, and Public Health Service, for example, review the technical aspects of the proposed WPA projects that fall within their respective fields of activity. After approval by the Federal WPA, each application must be approved by the President before the project becomes available for operation.

All approved projects are not placed in immediate operation. There is accumulated a reserve of approved projects that can be put into operation when the need arises. This reserve, which consists of projects that can provide employment for various types of workers, enables the WPA to adjust its program to fluctuations in unemployment. Projects of a type which can be readily expanded or contracted, such as highway, road, and street projects, are found particularly desirable for the project reserve.

## EXPLANATORY NOTES

WPA statistics presented in this report relate to activities conducted under the program from its initiation in the summer of 1935 through June 30, 1942. The figures cover activities on all WPA projects financed in whole or in part with WPA funds. Most of these projects have been operated by the WPA itself, but in the period beginning with July 1938 a few have been operated by other Federal agencies with funds appropriated to the WPA and allocated to these agencies. Unless otherwise specified, all statistics presented in this report cover the continental United States and the territories of Alaska, Hawaii, Puerto Rico, and the Virgin Islands. Many of the tabulations relate to fiscal years (July 1 through June 30).

### Employment Statistics

WPA employment data shown in the first three tables of the appendix relate to persons employed on all WPA projects. None of the figures shown in these tables include administrative employees or workers paid by project sponsors.

Monthly WPA employment figures have usually been used in both the appendix and the text tables, except for certain distributions that were reported only for selected weeks. The monthly statistics are averages of the numbers employed on a given day of each week. The basic weekly figures are summarized for the United States and territories in Table I of the appendix.

### Financial Statistics

Tables IV, V, and VI are based on reports of the Department of the Treasury and the Work Projects Administration and relate to Federal funds allocated or appropriated to the WPA under the ERA Acts of 1935, 1936, 1937, 1938, 1939, and fiscal years 1941 and 1942. The data cover project operations and administrative expenses of WPA (including administrative expenses of the NYA prior to July 1939); other Federal agency project operations and administrative expenses financed with allocations of WPA funds; the purchase of surplus clothing for needy persons and aid to self-help and cooperative associations under the ERA Act of 1938; tornado relief under the ERA Act of

1939; and the settlement of property damage claims under the ERA Acts of 1939 and fiscal years 1941 and 1942. Some of the terms used in these tables are defined in the following paragraphs:

1. "Allocations" represent amounts directly appropriated to the agency or ordered transferred to it, warrants for which have been issued by the Treasury.

2. "Obligations," as used in this report, represent actual or contingent liabilities incurred against allocated funds. The figures are cumulative, and represent paid, as well as unpaid, obligations. Requisitions for materials, supplies, and equipment are set up as obligations. Items such as pay rolls, rents, and travel expenses, which are certain to become due in a short period, are obligated one period in advance.<sup>1</sup>

3. "Expenditures" represent checks issued in payment of pay rolls and other certified vouchers.

Neither obligations nor expenditures necessarily provide a wholly accurate measure of operations at any given time since obligations in part reflect future operations, and expenditures lag behind current operations because of the time consumed in making actual payments.

Tables VII to XIII, dealing with expenditures of WPA and sponsors' funds on projects operated by WPA, are based on data compiled from WPA project ledgers maintained by the WPA divisions of finance in the several states.

### Project Accomplishment Statistics

Tables XIV, XV, and XVI relate to the number of physical units of work that were completed on projects operated by WPA from the beginning of the program through June 1942. The figures shown for certain activities on service programs, however, refer to the extent of public participation during the month of January 1942. The data presented are limited to selected items of accomplishment.

<sup>1</sup> This definition of "obligations" does not correspond with that used under the revised accounting procedure effective with fiscal year 1942. Under the new procedure, the definition given above applies to "encumbrances," and the term "obligations" covers only those transactions which legally reserve an appropriation for expenditure. For example, the obligations recorded for labor costs in the fiscal year 1942 include only earnings for completed pay periods plus accrued earnings for incomplete pay periods; in general, those recorded for nonlabor costs include only WPA requisitions for which purchase orders, bills of lading, or similar documents have been issued.

<sup>A</sup> Covers funds appropriated by the ERA Acts of 1935, 1936, 1937, 1938, 1939, and fiscal years 1941 and 1942, and by the deficiency appropriations listed in footnote 1, p. 33.

<sup>B</sup> Total allocations do not include \$16,486,530 of 1938, 1939, and fiscal year 1941 act funds which continued to be available for obligation on Federal construction projects through provisions of the fiscal year 1942 act. Of this amount, \$12,716,568 was available for projects operated by WPA and \$3,739,962 for WPA projects operated by other Federal agencies. Also excludes funds available upon transfer to the Emergency Relief Appropriation Act, fiscal year 1942.

<sup>C</sup> Allocations of WPA funds to these other Federal agencies were made under the ERA Acts of 1938, 1939, and fiscal years 1941 and 1942 and the last three of the deficiency appropriations referred to in footnote A.

<sup>D</sup> The Coast Guard was transferred from the Department of the Treasury to the Department of the Navy as of November 1, 1941.

<sup>E</sup> For the use of the Bureau of Internal Revenue and the Division of Tax Research.

A Expenditures during the fiscal year include, in addition to the amounts expended under the current ERA act, the liquidation of obligations incurred under previous ERA acts.

B Expenditures of WPA funds by these other Federal agencies began in the fiscal year 1939.

C The Coast Guard was transferred from the Department of the Treasury to the Department of the Navy as of November 1, 1941.

D For the use of the Bureau of Internal Revenue and the Division of Tax Research.

<sup>a</sup> Includes programs of other Federal agencies financed by allocation of WPA funds under the E.R.A. Acts of 1938, 1939, and fiscal years 1941 and 1942. Expenditures on these programs began in July 1938.<sup>b</sup> Includes NYA administrative expenses incurred prior to July 1939, when the WPA and NYA programs were administered jointly.<sup>c</sup> Separate data on WPA and other Federal agency expenditures are given by State for the fiscal years 1939 and 1940 on p. 123 of the *Report on Progress of the WPA Program*, June 30, 1940, and for the fiscal year 1941 on p. 110 of the *Report on Progress of the WPA Program*, June 30, 1941.

Source: Based on reports of the U. S. Treasury Department and the Work Projects Administration.

A less than 0.05 percent.  
 B includes adjustments for excess of deposits in the supply fund and for items in transit to control accounts, and sponsors' expenditures for land, land leases, easements, and right-of-way.
